# PROTEIN SCIENCE AND BIOTECHNOLOGY

---

The Master's Programme in Protein Science and Biotechnology is specifically aimed at giving students in-depth understanding of the structure-function relationship of proteins and the techniques used to produce and characterize them.

## Hands-on Experience

The degree programme is built around the international level research undertaken in the faculty. It has been planned around the early integration of MSc students into research groups and the use of the most modern equipment by individual students. Already during the first term, students will have hands-on experience of, for example, mass spectrometry, sub-second kinetics, microcalorimetry, surface plasmon resonance and

recombinant protein production.

The degree programme offers flexibility to allow students to specialize in the aspects of protein science and biotechnology which they believe will most benefit their future career, whether in academia or industry.

## Scholarships

Protein Science International Master's Scholarships are available to academically talented international students.

## APPLY TO STUDY WITH US

To be eligible for Master's level studies in the University of Oulu you are required to hold a Bachelor's degree or equivalent. The degree must be equivalent to at least three years of full-time studies.
