Technical Communication

Technical Communication is a 25 ECTS cr study programme designed within the discipline of English Philology in cooperation with language professionals working with information technology companies. The studies combine the perspectives of research and practice and include topics such as process writing, localization, structured documentation, user analysis, text accessibility and visual design. Students will familiarize themselves with the theory and practice of technical communication in the course of project work of different kinds.

Employment prospects

The programme increases students' prospects of gaining employment in various fields of language work. The digital portfolio prepared on the course functions both as a long-term tool for professional development and as a means of documenting the student's expertise in technical communication.

Practical information

Studies within the programme consist of project-based collaborative learning complemented by independent work in an online course environment.

Learning objectives

The programme offers students an insight into the work of language professionals within the field of information technology. The programme widens the range of opportunities for language students who wish to specialize in language use and communication as part of their working lives.
