Doctoral Studies (2013 - 2014)

Postgraduate education at the Faculty of Education leads to a doctoral degree. The doctoral students acquire a profound familiarity with their own field of research and produce new scientific knowledge. They participate in the activities of their own research groups and a variety of research networks in Finland and abroad. Doctoral education at the Faculty forms a part of the university-wide graduate school called UniOGS (University of Oulu Graduate School).

Doctoral education aims at the student:

- becoming thoroughly familiar with his or her field of research and its social significance, and achieving the capacity to apply independently and critically the methods of scientific research within his or her field of research and to produce new scientific knowledge
- becoming familiar with the developments, basic problems and research methods in her or his own field
- achieving a knowledge of general theory of science and other fields of science related to his or her research such that makes it possible to follow developments in them

The aim of the graduate school system is to educate doctors within a target time of four years so that those graduating have both professional and social qualifications to function in positions appropriate for doctorate holders. Such qualification includes both good scientific capabilities, the ability to find, produce and apply knowledge, good teamwork skills and a readiness to work in an international environment. The university units and (inter)national doctoral programmes are responsible for arranging the discipline-specific studies, while the University of Oulu Graduate School supports equal opportunities for every student to complete his or her degree, offers general and skills studies, provides for monitoring the progress of the studies, takes care of study administration, grants the rights to pursue doctoral studies and verifies doctoral degrees.
