1.2. General description of the Institute of Dentistry

The Institute of Dentistry at Oulu University is one of three Dental Schools in Finland giving both under and post-graduate dental education. Our specific mission is to educate scientifically thinking, clinically competent professional dentists, dental specialists and doctors of dental science. The website of the Institute can be found at http://www.oulu.fi/hamm/eng1.html

Head of Department

DDS, PhD, Professor of Oral development and Orthodontics, Pertti Pirttiniemi

e-mail pertti.pirttiniemi(at)oulu.fi, tel +358 (0)8 537 5491

Research areas

The Institute of Dentistry is divided into seven departments. All departments are headed by full professors who are in charge of the research and training in respective areas. Research is also carried out in co-ordination with several departments both within and outside the University of Oulu. For details of research projects see links to Departments:

- Department of Community Dentistry (Professor Jorma Virtanen)
- Department of Diagnostics and Oral Medicine (Professor Tuula Salo)
- Department of Oral development and Orthodontics (Professor Pertti Pirttiniemi)
- Department of Oral and Maxillofacial Surgery (Professor Kyösti Oikarinen)
- Department of Pedodontics, Cariology and Endodontology (Professor Leo Tjäderhane)
- Department of Periodontology and Geriatric Dentistry (Professor Tellervo Tervonen)
- Department of Prosthetic Dentistry (Professor Aune Raustia)

2. Information on Degree Programme

2.1. General description
The degree of Licentiate of Dentistry is 330 ECTS credits. An academic year consists of 60 credits. The studies are pre-scheduled and the average time required to complete the degree is five and a half years.

In Finland, the National Supervisory Authority for Welfare and Health is responsible for awarding legal status to dentists and for overseeing the profession. After having the dental degree, the graduate applicant can apply for restricted legal recognition from the National Supervisory Authority for Welfare and Health. This entitles dentist to take certain posts in health care centres under supervision and guidance. After the graduates have worked for nine months under supervision the National Supervisory Authority for Welfare and Health grants them full recognition, which is the prerequisite for working as a private practitioner and for applying for posts and duties in the field of dentistry in Finland.

Studies in dentistry consist of preclinical and clinical phases including theoretical studies, phantom courses and clinical work with patients. Students have their first contacts with patients already at the preclinical phase of the curriculum. In order to arrange teaching to cover more comprehensive themes certain subjects from different departments have been integrated and taught together.

The theoretical studies during the first two preclinical years consist of cell biology; anatomy, physiology, biochemistry and public health. After this stage the studies continue at the facilities of the Institute of Dentistry for three years period. Clinical phase comprises of lectures, clinical demonstrations, teamwork and actual clinical work with patients. The work with the patients gives the students the necessary skills in clinical diagnostics and treatment procedures.

2.2. Qualification awarded
Licentiate of Dentistry, (Equivalent to D.D.S. degree in Anglo-American countries)

2.3. Admission requirements
The admission requirements for studies in dentistry comprise the Matriculation Examination Certificate and an entrance examination. All applicants have to participate in the national entrance examination, which is usually arranged in May. The entrance examination is based on Finnish or Swedish textbook and consists of integrated problems of chemistry, biology and physics. The language of the entrance examination is Finnish.

2.4. Educational and professional goals
The education is based on competence areas that include thorough knowledge on general medicine, oral biology, materials, society and management; good diagnostic, practical and interaction skills; ability in acquiring and assessing information as well as humanity. The competences follow the seven domains that are described by Association for Dental Education in Europe (ADEE). These have been identified to represent the broad categories of professional activity and concerns that occur in the general practice of dentistry.

I. Professionalism
II. Interpersonal, Communication and Social Skills
III. Knowledge Base, Information and Information literacy
IV. Clinical Information Gathering
V. Diagnosis and Treatment Planning
2.5. Access to further studies

Specialization

Institutes of Dentistry are also responsible for specialist training in Finland. Before entering post-graduate training, which takes from three to six years, the trainee must have worked two years in general practice. The aim of specialist training is to provide the dentists with advanced, comprehensive theoretical and practical skills which are defined as clinical dentistry, orthodontics, oral and maxillofacial surgery and health care. A national examination is arranged and must be passed by each trainee.

Doctor of Dental Science (Equivalent to Ph.D. degree in Anglo-American countries)

Dental graduates may continue their studies to Doctor of Dental Science. This includes preparing a dissertation and completing other doctorate studies. In order to obtain the degree, a doctoral candidate must participate in theoretical research training, the extent of which is 20 ECTS credits. The training includes prescribed courses in general postgraduate training (5 credits) and special training (15 credits) according to the topic. The candidate must also conduct research, write and publish a doctoral dissertation and defend it in a public debate. Generally the minimum time needed to obtain a doctorate corresponds to 3 to 4 years of full-time work.

The preclinical phase lasts for two years and mostly consists of basic and biomedical studies and subject studies. The completion of clinical phase takes three years.

2.7. Final examination

To obtain the degree final examination has to be completed in following courses:

- 090302A Oral Pathology
- 090501A Pedodontics, Cariology and Endodontics
- 090502A Oral Surgery
- 090503A Prosthetic Dentistry
- 090504A Stomatognathic Physiology
- 090505A Parodontology and Geriatric Dentistry
- 090506A Oral Radiology
- 090510A Community Dentistry
- 090601A Oral Development and Orthodontics

In advanced studies the student concentrates on some specific topic, which has scientific relevance in the work of dentist. Advanced studies include thesis work (20 ECTS credits).

2.8. Examination and Assessment Regulations

Assessment is based on examinations, exercises, essays, field work, clinical work, reports or any other method determined pedagogically appropriate for the particular course. All the exams can be retaken. Additional information is given from the organizing department. Clinical work is assessed biannually.

Grades used for assessment of the courses are: 5 (excellent; ECTS A), 4 (very good; ECTS B), 3 (good; ECTS C), 2 (satisfactory; ECTS D), 1 (sufficient; ECTS E); fail.

090601A-04: Adult Orthodontics, 0,4 op

Opiskelumuoto: Intermediate Studies  
Laji: Partial credit  
Vastuuysikkö: Institute of Dentistry  
Arvostelu: 1 - 5, pass, fail  
Opettajat: Heikkinen, Tuomo Pekka Tapani
Opintokohteen kiele: Finnish

Language of instruction:  
Finnish  
Timing:  
3rd year, Spring term

Learning outcomes:  
To be able to make diagnosis of malocclusions in adult patients, to send the case to the orthodontist, to be familiar with the risks of treatment and nontreatment.

Contents:  
How to treat adult orthodontic patients. Indications and contraindications

Learning activities and teaching methods:  
lectures, individual studies

Recommended optional programme components:  
Orthodontic studies DC1 - DC5

Recommended or required reading:  

Assessment methods and criteria:

Timing:  
5th year, Autumn/Spring term

Learning outcomes:  
After these studies student can assess the developing occlusion and determine the treatment need. He has knowledge and skills to assess the timing of the treatment and treatment options and he can consider between orthodontic devices in different stages of occlusal development with the help of patient documentation and published research. Student is able to co-operate as a member in an orthodontic team with a specialist in orthodontics / a dentist acquainted in orthodontics.

Contents:  
treated patient cases to highlight orthodontic treatment practices, article seminar, typodont practices to strengthen orthodontic mechanics (e.g. early treatment of cross-bites, anchorage and fixed appliances), cephalometric analysis

Learning activities and teaching methods: 
Recommended optional programme components:
Orthodontic studies DC1-DC8, Orthodontic patient follow-up and treatment

Recommended or required reading:
Recommended reading: Richardson A: Interceptive Orthodontics, 4th edition, Suffolk, UK and articles on yearly
topics (e.g. crowding of the dentition)

Opettajat: Pirttiniemi, Pertti Mikael
Opintokohteen kielet: Finnish

Language of instruction:
Finnish
Timing:
3rd year, Autumn - Spring term

Learning outcomes:
The student is able to estimate the incidence and implication of abnormal occlusion and consider the function in orthodontic treatment need evaluation. He is able to make a diagnosis on most common occlusal abnormalities and is able to define the degree of difficulty and the demand of treatment. The student knows the protocol and methods of orthodontic examination and uses radiology in diagnosis. He understands the options for treatment methods and the importance of timing in treatment. The student is able to make most common orthodontic appliances and understands the overall care and advice for the patient. He knows the orthodontic first aid.

Contents:
The basic concepts in orthodontics and documentation in the examination of occlusion; understand the possibilities of treatment methods in different stages of the developing dentition; treatment methods, appliances and mechanics in preference to growth guidance; basic knowledge to make the diagnosis, treatment planning and timing in orthodontic treatment. Patient information to clarify home care in Orthodontics. First aid in Orthodontics. Orthodontic equipment and materials will be introduced, Orthodontic examination including anamnysis, occlusal status, biologic developmental stage of the dentition, occlusal function, cephalometric analysis, photography of the face and dentition and making dental casts including alginate copy and wax index of the dentition. How to make Orthodontic appliances will be introduced e.g. orthodontic ring, brackets, arch wire and how to fix them, remove fixed appliances and how to make retention appliances and fix them., the mechanics of expanding appliance, how to make extraoral traction and early cross-bite treatment. The student learns to bend an ideal orthodontic arch wire, retention wire and the wire for extraoral traction. Practical exercises in pairs and teaching videos will instruct the basics of patient care in Orthodontics.

Learning activities and teaching methods:
lectures, practical exercises individually and in pairs, demonstrations, individual studies

Recommended optional programme components:
Basic studies DC1 - DC4

Recommended or required reading:
Orthodontic examination carbon copy, basic mechanics in Orthodontics I and II, lecture hand-outs (in Finnish)
Extra reading: Richardson A: Interceptive Orthodontics, 4th edition, Suffolk, UK

Assessment methods and criteria:
Active participation in lectures, approved multiple choice examination before practical exercises, approved practical exercises and approved written essay examination.
