

Opasraportti

FTech - Civil Engineering (2020 - 2021)

University's new study guide for academic year 2020-2021 is published at <https://opas.peppi oulu.fi>

The study guide includes information on degrees, curriculums, courses and course timetables. Course registrations are still done in Oodi.

If you have questions on information in the study guide, please contact the study field's Academic Affairs Service Team <https://www oulu.fi/forstudents/faculty-study-affairs>

Tutkintorakenteet

Master of Science (Tech), Civil Engineering

Tutkintorakenteen tila: published

Lukuvuosi: 2020-21

Lukuvuoden alkamispäivämäärä: 01.08.2020

Bridge studies (0 - 60 op)

If you have bridge studies in your PSP, please fill them here.

031075P: Calculus II, 5 op

031076P: Differential Equations, 5 op

Module of the Options (55 - 60 op)

Choose one of module of the option.

Geo Engineering

A485221: Module of the Option / Geo Engineering, 60 op

Compulsory

488110S: Water and Wastewater Treatment, 5 op

488134S: Hydrogeology and groundwater engineering, 5 op

485304S: Fundamentals of Civil Engineering, 5 op

488127S: Field measurements, site investigations and geotechnical tests, 5 op

485306S: Geoenvironmental Engineering, 5 op

488141S: Urban hydrology, 5 op

485305S: Modelling in Geoenvironmental Engineering, 5 op

485308S: Foundation Engineering, 5 op

- 485203A: Information modelling and automation in infrastructure construction and maintenance, 5 op
- 485404S: Road Design and Construction, 5 op
- 485307S: Cold Climate Engineering, 5 op
- 485002S: Advanced Practical Training, 5 op

Structural Engineering (for BSc)

A485222: Module of the Option/Structural Engineering and Construction Technology, 60 op

Compulsory

- 485103A: Building physics, 5 op
- 485105A: Concrete technology, 5 op
- 485106A: Design of concrete structures, 5 op
- 466105S: Design of Steel Structures, 6 op
- 485104A: Structural renovation of buildings, 5 op
- 485202S: Building information modeling, 5 op
- 485021A: Construction Contracting, 5 op
- 485302A: Foundation Engineering, 5 op
- 485002S: Advanced Practical Training, 5 op

Choose at least 25 ECTS

- 466106S: Advanced topics on design of steel structures, 6 op
- 485304S: Fundamentals of Civil Engineering, 5 op
- 485305S: Modelling in Geoenvironmental Engineering, 5 op
- 485306S: Geoenvironmental Engineering, 5 op
- 488127S: Field measurements, site investigations and geotechnical tests, 5 op
- 485401A: Basics of Traffic Engineering, 5 op
- 485402S: Advanced Course in Traffic Engineering, 5 op
- 485403A: Basics of Road Engineering, 5 op
- 485404S: Road Design and Construction, 5 op
- 485115S: Advanced topics on concrete technology, 5 op
- 485116S: Advanced topics on design of concrete structures, 5 op
- 485113S: Advanced topics on building physics, 5 op
- 485025S: Advanced topics on Civil Engineering, 5 op
- 485024S: Construction Consulting, 5 op
- 485204S: Information modelling and automation in building construction and maintenance, 5 op
- 485203A: Information modelling and automation in infrastructure construction and maintenance, 5 op

Structural Engineering (for new students)

A485223: Module of the Option/Structural Engineering, 60 op

Choose 60 ECTS

- 485109A: Numerical methods in structural engineering, 5 op
- 485116S: Advanced topics on design of concrete structures, 5 op
- 485115S: Advanced topics on concrete technology, 5 op
- 485113S: Advanced topics on building physics, 5 op
- 466105S: Design of Steel Structures, 6 op
- 466106S: Advanced topics on design of steel structures, 6 op
- 461112S: Mechanical vibrations, 5 op
- 485307S: Cold Climate Engineering, 5 op
- 485202S: Building information modeling, 5 op
- 485112S: Project work in structural engineering, 5 op
- 485111S: Advanced Topics on Structural Timber Design, 5 op
- 485002S: Advanced Practical Training, 5 op

Supplementary Modules (25 - 45 op)

You can choose courses free in this MOdule or choose at least one of Supplementary Modules. Insert enough studies to Degree (90 ECTS+Master's Thesis).

Free choice courses

Structural Engineering

461107A: Finite Element Methods I, 5 op
 461104A: Strength of materials II, 5 op

Master's Thesis (30 op)

-

485991S: Master's Thesis Seminar, 0 op
 485999S: Master's Thesis in Civil Engineering, 30 op
 485990S: Maturity Test, Civil Engineering, 0 op

Bachelor of Science (Tech), Process and Environmental Engineering

Tutkintorakenteen tila: published

Lukuvuosi: 2020-21

Lukuvuoden alkamispäivämäärä: 01.08.2020

Intermediate Studies (60 op)

A485124: Civil Engineering, Intermediate Studies, 60 op
Intermediate Studies
 485101A: Introduction to building construction, 5 op
 461105A: Technical thermodynamics, 5 op
 485103A: Building physics, 5 op
 485022A: Fundamentals of built environment, 5 op
 485301A: Basics of Geotechnics, 5 op
 485302A: Foundation Engineering, 5 op
 485201A: Building information modeling and CAD, 5 op
 485023A: GIS and geoinformatics, 5 op
 485102A: Introduction to structural design, 5 op
 485105A: Concrete technology, 5 op
 485106A: Design of concrete structures, 5 op
 485001A: Practical Training, 5 op

Basic Studies (70 op)

-

A485120: Civil Engineering, Basic Studies, 70 op
Basic Studies
 485000P: Planning of Studies and Career, 1 op
 031010P: Calculus I, 5 op
 031075P: Calculus II, 5 op
 031076P: Differential Equations, 5 op
 031021P: Probability and Mathematical Statistics, 5 op
 031078P: Matrix Algebra, 5 op
 780120P: Basic Principles in Chemistry, 5 op
 761119P: Electromagnetism 1, 5 op
 461102A: Statics, 5 op
 461103A: Strength of materials I, 5 op
 555265P: Occupational Safety and Health Management, 5 op
 485021A: Construction Contracting, 5 op
 555285A: Project management, 5 op
 030005P: Information Skills, 1 op
Choose language studies
 902150Y: Professional English for Technology, 2 op

- 902142Y: Business Correspondence, 2 op
- 902145Y: Working Life Skills, 2 op
- 902147Y: Academic Vocabulary for Science and Technology, 2 op
- 902121Y: Other Studies in English (level B2), 2 - 8 op

Module preparing for the Option (40 op)

Choose on for your Study Option.

Structural Engineering

A485122: Civil Engineering, Module preparing for the Option / Structural Engineering, 40 op

Structural Engineering

- 461104A: Strength of materials II, 5 op
- 461106A: Dynamics, 5 op
- 461108A: Mechanics of materials, 5 op
- 461107A: Finite Element Methods I, 5 op
- 485107A: Timber construction and product technology, 5 op
- 485110A: Timber product technology and construction, 5 op
- 485108A: Desing of Steel Structures and Steel Construction, 5 op
- 485104A: Structural renovation of buildings, 5 op

Geo Engineering

A485121: Civil Engineering, Module preparing for the Option / Geo Engineering, 40 op

Geo Engineering

- 477052A: Fluid Mechanics, 5 op
- 488102A: Hydrological Processes, 5 op
- 488144A: Water distribution and sewage networks, 5 op
- 492300A: Rock mechanics, 5 op
- 485401A: Basics of Traffic Engineering, 5 op
- 485403A: Basics of Road Engineering, 5 op
- 488505A: Waste managemet and recycling, 5 op
- 485303A: Soil Mechanics, 5 op

Mining Engineering

A485123: Civil Engineering, Module preparing for the Option / Mining Engineering, 40 op

Mining Engineering

- 771113P: Introduction to Geology I, 5 op
- 771114P: Introduction to Geology II, 5 op
- 771117P: Basic course in mineralogy, 5 op
- 461011A: Strength of Materials II, 7 op
- 461106A: Dynamics, 5 op
- 461108A: Mechanics of materials, 5 op
- 491102P: Introduction to solid earth geophysics, 5 op
- 492300A: Rock mechanics, 5 op

Opintojaksojen kuvaukset

Tutkintorakenteisiin kuuluvien opintokohteiden kuvaukset

031075P: Calculus II, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Pauliina Uusitalo

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031075P	Calculus II (OPEN UNI)	5.0 op
031011P	Calculus II	6.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish. The course can be completed in English by intermediate exams or by a final exam.

Timing:

Spring semester, period 3

Learning outcomes:

Upon completion of the course, the student is able to examine the convergence of series and power series of real terms, can explain the use of power series e.g. in calculating limits, is able to solve problems related to differential and integral calculus of real and vector valued functions of several variables.

Contents:

Sequences, series, power series and Fourier series of real terms. Differential and integral calculus of real and vector valued functions of several variables.

Mode of delivery:

Online teaching

Learning activities and teaching methods:

Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:

-

Prerequisites and co-requisites:

The recommended prerequisite is the completion of the course 031010P Calculus I.

Recommended optional programme components:

-

Recommended or required reading:

Kreyszig, E: Advanced Engineering Mathematics; Grossman S.I.: Multivariable Calculus, Linear Algebra, and Differential Equations; Adams, R.A.: A Complete Course Calculus.

Assessment methods and criteria:

Intermediate exams or a final exam. The exams are remote exams. It is possibility to take exams also at the university.

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

Person responsible:

Pauliina Uusitalo

Working life cooperation:

-

Other information:

-

031076P: Differential Equations, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Ruotsalainen Keijo

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031076P	Differential Equations (OPEN UNI)	5.0 op
800320A	Differential equations	5.0 op
031017P	Differential Equations	4.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the spring, during period 4. It is recommended to complete the course at the 1th spring semester.

Learning outcomes:

The students can apply differential equations as a mathematical model. They can identify and solve various differential equations and they have knowledge on basic solvability of differential equations. The student can use the Laplace transform as a solution method.

Contents:

Ordinary differential equations of first and higher order.

Laplace transform with applications to differential equations.

Mode of delivery:

Online teaching, Stack/Moodle digital learning environment

Learning activities and teaching methods:

Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:

1. year students of engineering, mathematics and physics.

Prerequisites and co-requisites:

The recommended prerequisite is the completion of the course Calculus I.

Recommended optional programme components:

-

Recommended or required reading:

Recommended literature: Kreyszig, E: Advanced Engineering Mathematics;

Assessment methods and criteria:

The course can be completed by intermediate exams (2 exams) or by a final exam.

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

Person responsible:

Keijo Ruotsalainen

No

A485221: Module of the Option / Geo Engineering, 60 op

Voimassaolo: 01.08.2017 -

Opiskelumuoto: Module of the Option

Laji: Study module

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

Compulsory

488110S: Water and Wastewater Treatment, 5 op

Voimassaolo: 01.08.2005 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Elisangela Heiderscheidt

Opintokohteen kielet: English

Leikkaavuudet:

480151S Water and Wastewater Treatment 7.0 op

480208S Industrial Water and Wastewater Treatment 3.5 op

ECTS Credits:

5 ECTS credits/135 hours of work

Language of instruction:

English

Timing:

The course unit is held in the autumn semester, during period 1

Learning outcomes:

Upon completion of the course, the student will be able to understand the theory and practicalities behind the most used purification processes in water and wastewater treatment. The student will also be capable of performing basic dimensioning calculations and therefore he/she will be able to dimension structures /units of water and wastewater treatment plants and to comprehend the basic requirements of different purification processes.

Contents:

Water quality characteristics of source water; basic principles of purification processes (coagulation /flocculation, sedimentation, biological treatment, filtration, disinfection, etc); process units in water and waste water treatment; selection of process units; dimensioning of treatment structures and unit processes.

Mode of delivery:

Mix of guided self-study work, face-to-face teaching and field visits.

Learning activities and teaching methods:

Lectures (30 h), field visits (5 h), exercises and other assignments (60 h) and self-study (38 h).

Target group:

Students in master program of environmental and civil engineering.

Prerequisites and co-requisites:

The required prerequisite is the completion of the following course or to have corresponding knowledge prior to enrolling for the course unit: Introduction to process and environmental engineering (477013P) or I (477011P) and II (488010P).

Recommended or required reading:

Lecture hand-outs & "Lindquist, A., 2003. About water treatment. Helsingborg: Kemira Kemwater".
Optional: RIL 124-2, Vesihuolto II; Metcalf & Eddy, Wastewater Engineering: Treatment and Reuse; AWWA, Water quality & treatment; AWWA, Water treatment plant design.

Assessment methods and criteria:

The course can be completed in two different study modes: A) Active mode: midterm exam based on reading material + completion of 2 group exercises + final exam based on lectures and exercises; B)

Passive mode (book exam): 100% self-study mode where the student is provided with 2-3 reference books and attends an exam based on the provided material. (Passive mode can be complete under special circumstances).

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Post-doctoral researcher Dr Elisangela Heiderscheidt

Working life cooperation:

Through visits to water and wastewater treatment plants, which include lectures provided by environmental engineers in charge and guided tours, the students familiarize with the main technological and process related principles of the field and have the chance to experience in firsthand how to deal with some of the most common issues related to water and wastewater purification systems.

Other information:

The course will be held as distance learning in the fall of 2020.

488134S: Hydrogeology and groundwater engineering, 5 op

Voimassaolo: 28.11.2016 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Pekka Rossi

Opintokohteen kielet: English

ECTS Credits:

5 ECTS credits/133 hours of work

Language of instruction:

English

Timing:

The course unit is held in the spring semester, during period 3

Learning outcomes:

Upon completion of the course, the student will have knowledge on groundwater systems and the basic hydrogeological and engineering concepts involved. This includes analysis of flow in porous media, hydraulics of groundwater systems, groundwater quality and groundwater use. After the course students are able to estimate key factors influencing on groundwater recharge, flow and discharge and to use general methods to calculate groundwater flow.

Contents:

2D and 3D groundwater flow, conceptual models, unsaturated layer flow, water storage and retention, heterogeneity and isotropy, aquifer types, pumping tests, geophysical methods, groundwater quality and resources in Finland.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

lectures (18 h), calculus lectures (12 h), homework, exercises and self-study (103 h).

Target group:

Master students in the water engineering orientation of the Environmental Engineering program and in master program of civil engineering.

Prerequisites and co-requisites:

The required prerequisite is the completion of the following course prior to enrolling for the course unit: 488102A Hydrological Processes.

Recommended or required reading:

Lecture handouts

Fundamentals of Ground Water (F.W. Schwartz, H Zhang, 2003, ISBN 0-471-13785-5) - main book,
Physical and Chemical Hydrogeology (Domenico PA, Schwartz FW, 2nd edition, 1998, ISBN 0-471- 59762-7) – second option.

Maanalaiset vedet - pohjavesigeologi-an perusteet (Korkka-Niemi K, Salonen V-P, 1996, ISBN 951-29-0825-5). Pohjavesi ja pohjaveden ympäristö (Mälkki E, 1999, ISBN 951-26-4515-7).

Assessment methods and criteria:

exam and/or lecture exams.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Postdoctoral Researcher Pekka Rossi

Working life cooperation:

Students familiarize themselves to a real groundwater aquifer cases discussed in lectures and in the course exercise.

485304S: Fundamentals of Civil Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

488121S Municipality Geotechnics 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during period 1

Learning outcomes:

The student understand how geotechnical design is joined to a part of society's decision-making processes. He or she can prepare an assessment of foundation properties and design reinforcement. He or she understands specialties of railway construction and vibration problems. He or she gets the knowledge of property and surface drainage methods, how to lower groundwater table and what kind of risks are included to earth slopes and how to reinforce those.

Contents:

Norms and instructions, basis of geotechnical design, earth and road structures, soil improvement, property and surface drainage, lowering of groundwater table, pipeline construction, specialties of railway construction and vibration problems, geotechnical monitoring and measurements, earthworks

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (34 h) and design and calculation exercises (10 h) also self-study (91 h)

Target group:

Master students in the Civil Engineering program

Prerequisites and co-requisites:

Prerequisites: 485301A Basic of Geotechnics (former 488115A Geomechanics), 485201A Building information modeling and CAD (or similar AutoCAD knowledge)

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Examination and homeworks

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Anne Tuomela

Working life cooperation:

The course includes guest lectures from various sectors of civil engineering.

Other information:

This course will replace course 488121S Fundamentals of Civil Engineering in Academic year 2020-21.

488127S: Field measurements, site investigations and geotechnical tests, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Ali Torabi Haghghi

Opintokohteen kielet: English

Leikkaavuudet:

488118S Laboratory Exercises and Field Measurements in Environmental Engineering 10.0 op

ECTS Credits:

5 ECTS /133 hours of work

Language of instruction:

English

Timing:

The course unit is given during periods 1 and 2.

Learning outcomes:

Upon completion the student should be able to design field measurements and understand the quality of sampling and measurements in the field of environmental engineering. The student also improves skills of working in a team of fellow students to share expertise and execution responsibilities. The student understands the laboratory testing procedures and the associated parameters that help in estimating the soil mechanics and Geotechnical engineering and. The student knows how to use different methods for field measurement and sampling in water and geotechnical issues. The student can take considering the safety during the laboratory works and field measurements. After the course, the student can write detailed engineering reports.

Contents:

In the lectures: Units of measurements, error and mistake in laboratory works and field measurements, random and systematic error, precision and accuracy in laboratory work, planning field works, description of measuring site, securing results and material, sample preservation, subsoil exploration, direct & indirect methods of exploration, disturb and undisturbed samples, safety in field work, introduction on surveying, levelling, map and scale, different tests in soil mechanics laboratory.

Laboratory works in soil mechanics and geotechnical engineering: sieving test, hydrometer test, Atterberg limits test, proctor test, direct shear box test and oedometer test.

In the field: Working with GPS. Levelling and collecting data for preparing topography map. Soil sampling, surface water and groundwater sampling, Measuring velocity and discharge of river by using current meter and tracer.

Mode of delivery:

Face-to-face teaching, laboratory working

Learning activities and teaching methods:

Lectures (16 h), Fieldwork (20 h), Lab-work (9 h), Group work (88 h)

Target group:

Master students in the Water and Geo Engineering and Water and Environment study options

Prerequisites and co-requisites:

The required prerequisite is the completion of the following course prior to enrolling for the course unit: 488115A Geomechanics

Recommended or required reading:

Field measurements and Laboratory work instruction, lecture materials

Assessment methods and criteria:

Two exams (40%), Report (50%) and assignments (10%), passing the exam is requirement for passing the course

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University Teacher Ali Torabi Haghighi

Working life cooperation:

No

485306S: Geoenvironmental Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Tuomela, Anne Marika

Opintokohteen kielet: Finnish

Leikkaavuudet:

488131S Geoenvironmental Engineering 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during period 1

Learning outcomes:

The student knows norms and instruction which are related to contaminated sites. The students can choose the suitable remediation technique for contaminated soil. The student can calculate contaminant transport in soils. The student can also design geotechnical structures of industrial and domestic landfills and evaluate the needs for remediation of contaminated soils. Student knows how to use by-products from industry in different soil construction applications.

Contents:

Norms and instructions, a project work where student will discover a contaminated soil and make a proposal for remediation technique, properties of soil materials and industrial by-products, basis of

geotechnical design for landfill environment, structures of dams and impoundments, geoenvironmental challenges in mining, remote sensing as a tool for geoenvironmental applications.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (44 h), group work (60 h) and independent work (31 h)

Target group:

Master students in the Civil Engineering program

Prerequisites and co-requisites:

485301A Basics of Geotechnics

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Written exam and exercises

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Anne Tuomela

Working life cooperation:

The course includes a visit to a site decided later and also guest lectures from professionals in industry and administration.

Other information:

This course will replace course 488131S Geoenvironmental Engineering

488141S: Urban hydrology, 5 op

Voimassaolo: 28.11.2016 - 31.07.2020

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Pekka Rossi

Opintokohteen kielet: English

Leikkaavuudet:

488146S Urban water management 5.0 op

ECTS Credits:

5 ECTS credits/133 hours of work

Language of instruction:

English

Learning outcomes:

Student has a knowledge on the different aspects of urban hydrology to manage waters in a built environment. Student understands the challenges concerning quantity and quality questions of urban waters and can take them into account in designing.

Contents:

Storm water system design, green infrastructure, urban erosion, drainage, flood control and climate change in urban hydrology, urban water quality and constructed wetlands.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (30 h), homeworks (45 h) and a design exercise (58 h).

Target group:

Students in master program of environmental engineering and in master program of civil engineering

Prerequisites and co-requisites:

AutoCAD ja Matlab prosessi- ja ympäristötekniikan työkaluna or at least equivalent information about CAD use .477052A Fluid mechanics, 477312A Lämmön- ja aineensiirto and 488102A Hydrological Processes.

Recommended optional programme components:

This course is a straight continuation of course 488135A Water distribution and sewage networks (recommended but not prerequisite prior to this course)

Recommended or required reading:

Lecture handouts and materials, Hulevesiopas (2012, in Finnish).

Assessment methods and criteria:

Examination, seminar and a design exercise.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Postdoctoral Researcher Pekka Rossi

Working life cooperation:

Course includes guest lectures of storm water designers/consultants and/or municipalities/cities responsible for the storm water management.

Other information:

The course has ended and replaced by a new course 488146S Urban water management.

485305S: Modelling in Geoenvironmental Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Tuomela, Anne Marika

Opintokohteen kielet: Finnish

Leikkaavuudet:

488111S Modelling in Geoenvironmental Engineering 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester, during period 4

Learning outcomes:

After the course the student can apply the numerical calculation methods in design and dimensioning of earth and geoenvironmental structures. The student can evaluate the influence of boundary conditions and material parameters in calculation results.

Contents:

Stability analysis. Contaminant transport. Design and dimensioning of piles. Settlement calculation due to different load types. Calculating the earth pressure of retaining walls. Freezing and thawing of earth structures. Geotechnical design of pile foundation and deep stabilization of foundation.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (5 h), design (60 h) and modelling assignments (70 h).

Target group:

Master students in the Civil Engineering program

Prerequisites and co-requisites:

The required prerequisite: 485301A Basics of Geotechnics and 485303A Soil Mechanics. Also recommended: 485201A Building information modeling and CAD, 485304S Fundamentals of Civil Engineering, 485302A Foundation Engineering, 485306S Geoenvironmental Engineering.

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Passing the course requires solving the given assignments and writing reports about them. The assignments are solved with computer modelling, which requires constant participation to the lectures.

Grading:

The course utilizes verbal grading scale pass/fail.

Person responsible:

University teacher Anne Tuomela

Working life cooperation:

The course includes guest lectures from an international consulting and engineering company.

Other information:

This course will replace course 488111S Modelling in Geoenvironmental Engineering

485308S: Foundation Engineering, 5 op

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

485203A: Information modelling and automation in infrastructure construction and maintenance, 5 op

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Tanja Kolli

Opintokohteen kielet: Finnish

Leikkaavuudet:

466115S	Information modelling and automation in infrastructure construction and maintenance	5.0 op
460180S-01	Automation of Road Construction, examination	0.0 op
460180S-02	Automation of Road Construction, exercises	0.0 op
460180S	Automation of Road Construction	5.0 op

Ei opintojaksokuvauksia.

485404S: Road Design and Construction, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Veikko Pekkala

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester during period 4

Learning outcomes:

By completing the course student is familiar with road structure and function, structural modernisation, pavements and the basics of earthworks. He/she is also able to design road computer aided.

Contents:

Function of road structure, road damaging, structural modernisation, pavements, Road design and construction

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 32 h, self-study 75 h

Target group:

Students in the master's programmes of environmental engineering

Prerequisites and co-requisites:

485403A Basics of Road Engineering

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Exam and assignment(s)

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Veikko Pekkala

485307S: Cold Climate Engineering, 5 op**Voimassaolo:** 01.08.2020 -**Opiskelumuoto:** Advanced Studies**Laji:** Course**Vastuuyksikkö:** Civil Engineering field**Arvostelu:** 1 - 5, pass, fail**Opettajat:** Anssi Rauhala**Opintokohteen kielet:** English**Leikkaavuudet:**

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester, during period 3

Learning outcomes:

After the course the student knows how permafrost and seasonally frozen ground affect different aspects of construction. The student can perform frost heave calculations and evaluate the need for ground frost insulation. The student knows how winter conditions are considered in road and street design. Student knows the basics of geothermal energy and energy efficient structures.

Contents:

Permafrost and seasonally frozen ground. Frost heave and ground frost insulation. Winter conditions related road, street and water supply design criteria. Geothermal energy. Energy efficient structures.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures and exercises (28 h), independent study (107 h).

Target group:

Master's students in Civil Engineering

Prerequisites and co-requisites:

485301A Basics of Geotechnics, 485102A Introduction to structural design

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Examination and assignment(s)

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

485002S: Advanced Practical Training, 5 op**Voimassaolo:** 01.08.2019 -**Opiskelumuoto:** Advanced Studies**Laji:** Practical training**Vastuuyksikkö:** Civil Engineering field**Arvostelu:** 1 - 5, pass, fail**Opintokohteen kielet:** Finnish**Leikkaavuudet:**

477005S Advanced Practical Training 5.0 op

460004S Practical Training II 5.0 op

ECTS Credits:

5 ECTS, 2 months working full-time

Language of instruction:

Finnish or English

Timing:

Student usually works in summer time.

Learning outcomes:

During the advanced practical training the student is exposed to his/her working environment from the point of view of his/her studies and becomes acquainted with another possible future job or to a different assignment already in a familiar working environment. The student can identify the problems of the working environment and can solve them. The student can apply theoretical knowledge in practical tasks. The student identifies the tasks appropriate for the Master of Science in Technology at his/her workplace.

Mode of delivery:

Working as employee

Target group:

Master's students in Civil Engineering

Assessment methods and criteria:

Student has to show original references and leave the application. In addition she/he has to participate to seminar where she/he reports own summer job. In reference must be training time period and duties.

Grading:

Verbal scale Passed/Failed

Person responsible:

Saara Luhtaanmäki

Working life cooperation:

Yes.

A485222: Module of the Option/Structural Engineering and Construction Technology, 60 op**Voimassaolo:** 01.08.2017 -**Opiskelumuoto:** Module of the Option**Laji:** Study module**Vastuuyksikkö:** Civil Engineering field**Arvostelu:** 1 - 5, pass, fail**Opintokohteen kielet:** Finnish

*Compulsory***485103A: Building physics, 5 op**

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Filip Fedorik

Opintokohteen kielet: English

Leikkaavuudet:

466111S	Building physics	5.0 op
460160S-01	Building Physics, examination	0.0 op
460160S-02	Building Physics, exercises	0.0 op
460160S	Building Physics	3.5 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

English

Timing:

Autumn, Periods 1-2

Learning outcomes:

After completing the course the student can explain basic phenomenon of building physics. The student can analyse and describe heat, air and moisture transfer in buildings and also explain main causes of typical moisture damages. The student can explain factors affecting energy efficiency and can calculate the energy efficiency number. The student knows the calculation methods in acoustics.

Contents:

Thermal isolation design. Determination of structure temperature. Moisture transfer and moisture exiting. Airflows in structures. Energy efficiency in buildings. Acoustic design.

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, exercises, case studies, and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466101A Introduction to building construction

Recommended or required reading:

The material that is in English will be distributed at the lectures

- 1) Lecture notes (mainly in Finnish)
- 2) Suomen rakentamismääräyskokoelman osat C1, C2, C3, C4 ja D3.
- 3) Introduction to Building Physics, Hagentoft, C.-E. (2001), ISBN 91-44-01896-7, (As specified in lectures).

Assessment methods and criteria:

Exercises and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

university lecturer Raimo Hannila

Other information:

This course will replace course 466111S Building Physics in Academic year 2020-21.

485105A: Concrete technology, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466109S	Concrete technology	5.0 op
460155S-01	Concrete Technology, examination	0.0 op
460155S-02	Concrete Technology, laboratory exercise	0.0 op
460155S	Concrete Technology	4.5 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Spring semester, periods 3-4

Learning outcomes:

After completing the course the student is able to specify concrete and the materials from which it is made. They can design normal concrete mixes and identify, describe and carry out the main laboratory tests relevant to the use of concrete on site.

Contents:

Cements and cementitious materials, aggregates for concrete, concrete mix design, properties of fresh and hardened concrete, laboratory tests, specification testing and compliance, environmental exposure classes.

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, exercises, case studies, laboratory sessions and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466101A Introduction to building construction

Recommended optional programme components:

466101A Introduction to building construction

Recommended or required reading:

The material that is in English will be distributed at the lectures.

- 1) Lecture notes (mainly in Finnish),
- 2) Järvinen, Maarit. 2004. Betonitekniikan oppikirja : BY 201. Helsinki : Suomen Betonitieto.;
- 3) Suomen betoniyhdistys. Betoninormit 2004: BY 50. Helsinki : Suomen betonitieto;
- 4) Suomen Standardisoimisliitto ry. SFS-Standardisointi:
- 5) SFS-EN Standards

Assessment methods and criteria:

Passed laboratory exercises and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

Jorma Hopia

Other information:

This course will replace course 466109S in Academic year 2020-21.

485106A: Design of concrete structures, 5 op**Voimassaolo:** 01.08.2019 -**Opiskelumuoto:** Intermediate Studies**Laji:** Course**Vastuuyksikkö:** Civil Engineering field**Arvostelu:** 1 - 5, pass, fail**Opintokohteen kielet:** Finnish**Leikkaavuudet:**

466107S	Design of concrete structures	6.0 op
460147A	Introduction to Design of Concrete Technology	4.0 op
460147A-01	Introduction to Design of Concrete Technology, examination	0.0 op
460147A-02	Introduction to Design of Concrete Technology, exercise work	0.0 op
460148S	Design of Concrete Structures	4.0 op
460148S-01	Design of Concrete Structures I, examination	0.0 op
460148S-02	Design of Concrete Structures I, exercises	0.0 op

ECTS Credits:

5 ects

Language of instruction:

Finnish

Timing:

Lectures and exercising on periods 3 and 4.

Learning outcomes:

Upon completion of the course, the student will be able to design typical reinforced concrete structures to EN-standards.

Contents:

Strength and strain properties of concrete and reinforcing bars, time dependent properties. Limit state design of concrete beams and columns to EN standards. Service life design. Fire design. Anchoring and joints of reinforcing bars. Design of flanged cross sections, walls and wall like beams, and foundations carrying walls and columns.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures and exercises 48 h, project work 24 h and independent work 63 h

Target group:

Bachelor level students in the degree program of civil engineering

Prerequisites and co-requisites:

Basic knowledge of statics, solid mechanics, concrete technology and structural engineering

Recommended or required reading:

Nykyri: by 211 Betonirakenteiden suunnittelun oppikirja, osa 1, 2013 ja osa 2, 2014; Leskelä: by 210 Betonirakenteiden suunnittelu ja mitoitus 2008; EN 1992-1-1, EN 1992-1-2 ja muut EN-standardit soveltuvin osin; by 51 Betonirakenteiden käyttöikäsuunnittelu 2007; by 47 Betonirakentamisen laatuohjeet 2007; RIL 229-2-2006 Rakennesuunnittelun asiakirjaohje, Mallipiirustukset ja -laskelmat; RIL 202-2011/BY 61-2011 Betonirakenteiden suunnitteluohje; Martin, Purkiss: Concrete Design to EN 1992, Elsevier, 2nd ed. 2006. Materials from lectures and exercises.

Assessment methods and criteria:

The course is passed by partial exams during the course or by a final exam. A project work is also required.

Grading:

The course utilises a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Senior research fellow Antti H. Niemi

Other information:

This course will replace course 466107S Design of concrete structures in Academic year 2020-21.

466105S: Design of Steel Structures, 6 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Kangaspuoskari, Matti Johannes

Opintokohteen kielet: Finnish

Leikkaavuudet:

485118S	Design of Steel Structures	5.0 op
485108A	Design of Steel Structures and Steel Construction	5.0 op

460125A-02	Introduction to Design of Steel Structures, exercise work	0.0 op
460127S	Design of Steel Structures	4.0 op

ECTS Credits:

6 ECTS

Language of instruction:

Finnish

Timing:

Periods 1 and 2

Course 485108A replaces this course in academic year 2021-2022.

Learning outcomes:

After completing the course the student is able to explain the basic nature of the crystalline structure of steel and its elastomeric material model. He / she is able to evaluate the effect of alloys, heat treatment and welding on the mechanical properties of steel. He / she can explain what happens to steel in the event of a fire and the basics of fire design. The student is able to design the joints of a steel structure frame and can dimension the steel structure under different load combinations. He / she is able to analyze stability problems and can explain inaccuracies and second order effects.

Contents:

The following topics are covered during the course: Ferrous metals and their properties. Principles of Eurocodes. Design of simple steel structure under base loading cases and loading combinations. Corrosion. Design of joints in steel structures. Composite structures with steel member. Section classification. Effective cross-section. Cross-sections with stiffeners. Steel members in bending and axial compression. Buckling, lateral torsional buckling, and torsion.

Mode of delivery:

Face-to-face.

Learning activities and teaching methods:

Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:

Degree students who study steel structure design.

Prerequisites and co-requisites:

466102A Introduction to Structural Design. Key notes in courses Statics, Strength of Materials I, Strength of Materials II, Energy principles and Their Use in Beam Structures, and Plates and Shells and Mechanics of materials

Recommended or required reading:

Lecture notes (in Finnish). Eurocodes 1990-1999.

Assessment methods and criteria:

Three midterm exams or one final exam is required. One design exercise is required.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Matti Kangaspuoskari

485104A: Structural renovation of buildings, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466117S Structural renovation of buildings 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

Autumn, Period 2

Learning outcomes:

After completing the course students can describe different structural materials and structural systems used in residential buildings in 1900-2000. They are able to identify and explain the typical risk structures and defects in those buildings. They can also explain the old design codes and recommendation used in Finland.

Contents:

Finnish house construction and typical details during 1900-2000. Standards, design recommendations and design methods used in Finland.

Mode of delivery:

Lecture room teaching

Learning activities and teaching methods:

Lectures and exercises

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

Fundamentals of building construction and building physics

Recommended optional programme components:

-

Recommended or required reading:

Lecture material

Assessment methods and criteria:

Passed practical works and exam

Grading:

The course utilizes a numerical grading scale 1-5. Numerical scale zero stands for a fail.

Person responsible:

Senior research fellow Antti H. Niemi

Working life cooperation:

-

Other information:

This course will replace the course 466117S in academic year 2020-21.

485202S: Building information modeling, 5 op**Voimassaolo:** 01.08.2020 -**Opiskelumuoto:** Advanced Studies**Laji:** Course**Vastuuyksikkö:** Civil Engineering field**Arvostelu:** 1 - 5, pass, fail**Opintokohteen kielet:** Finnish**Leikkaavuudet:**

466114S Building information modeling 5.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Autumn semester, periods 1-2

Learning outcomes:

After completing the course the student is able to make 3D models of buildings and detail the connections between building elements and components. He can model different building materials and is familiar with one commercial software.

Contents:

Modeling concrete and steel structures. Connections. Macros, Drawings.

Mode of delivery:

Face-to-face

Learning activities and teaching methods:

Lectures, exercises and self directed learning

Target group:

Students studying structural engineering

Recommended or required reading:

The material that is in English will be distributed at the lectures

Assessment methods and criteria:

Participation to lectures and exercises

Grading:

Pass or fail.

488129S	Foundation Engineering	5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester during period 2

Learning outcomes:

After completing the course, students know the basics of base construction plan, can identify geotechnical dimensioning limit states and use partial factor method. Student can describe different foundation methods, types and principles of typical foundation piles, excavation types, risks and principles of risk management,

radon. Student knows the principles of foundation drainage and frost protection. Student knows the basics of how to design piled foundation. Student knows ultimate bearing capacity formula for shallow foundation (Eurocode).

Contents:

The basis of geotechnical design of foundations. Most common foundation types. Dimensioning of piled foundation. Ground improvement. Drainage. Filling and compression. Frost protection. Radon.

Mode of delivery:

Face-to-face teaching.

Learning activities and teaching methods:

Lectures and exercises (28 h), self-study (107 h)

Target group:

Students in bachelor's program of civil engineering

Prerequisites and co-requisites:

485301A basics of Geotechnics

Recommended optional programme components:

460128S	Advanced Topics on Design of Steel Structures I	4.0 op

ECTS Credits:

6 ECTS

Language of instruction:

Finnish

Timing:

Periods 3 and 4

Learning outcomes:

The student can explain the basics of fatigue design of a welded structure. The student is able to design sheet metal structures and welded plate beam structures. He / she is able to analyze and design steel structures and their joints. They are able to analyze dynamically loaded structures and to evaluate the effect of vibrations on the functionality and usability of structures.

Contents:

The following topics are covered during the course: Steel structure under fatigue load. Fracture toughness. Stability and bracing of a steel frame building. Fire design. Plated structural elements with stiffeners. Elements resistance to transverse forces. Cold-formed members. Mechanical vibrations. Seismic design. Chimneys. Crane supporting structures. Accidental design situations and progressive collapse.

Mode of delivery:

Face-to-face.

Learning activities and teaching methods:

Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:

Degree students who study steel structure design.

Prerequisites and co-requisites:

460117A Introduction to Structural Design and 466105S Design of Steel Structures. Key notes in courses Statics, Strength of Materials I, Strength of Materials II, Mechanics of materials and Mechanical Vibrations.

Recommended or required reading:

Lecture notes (in Finnish). Eurocodes 1990-1999.

Assessment methods and criteria:

Three midterm exams or one final exam is required. One design exercise is required.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during period 1

Learning outcomes:

The student understand how geotechnical design is joined to a part of society's decision-making processes. He or she can prepare an assessment of foundation properties and design reinforcement. He or she understands specialties of railway construction and vibration problems. He or she gets the knowledge of property and surface drainage methods, how to lower groundwater table and what kind of risks are included to earth slopes and how to reinforce those.

Contents:

Norms and instructions, basis of geotechnical design, earth and road structures, soil improvement, property and surface drainage, lowering of groundwater table, pipeline construction, specialties of railway construction and vibration problems, geotechnical monitoring and measurements, earthworks

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (34 h) and design and calculation exercises (10 h) also self-study (91 h)

Target group:

Master students in the Civil Engineering program

Prerequisites and co-requisites:

Prerequisites: 485301A Basic of Geotechnics (former 488115A Geomechanics), 485201A Building information modeling and CAD (or similar AutoCAD knowledge)

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Examination and homeworks

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Anne Tuomela

Working life cooperation:

The course includes guest lectures from various sectors of civil engineering.

Other information:

This course will replace course 488121S Fundamentals of Civil Engineering in Academic year 2020-21.

485305S: Modelling in Geoenvironmental Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Tuomela, Anne Marika

Opintokohteen kielet: Finnish

Leikkaavuudet:

488111S Modelling in Geoenvironmental Engineering 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester, during period 4

Learning outcomes:

After the course the student can apply the numerical calculation methods in design and dimensioning of earth and geoenvironmental structures. The student can evaluate the influence of boundary conditions and material parameters in calculation results.

Contents:

Stability analysis. Contaminant transport. Design and dimensioning of piles. Settlement calculation due to different load types. Calculating the earth pressure of retaining walls. Freezing and thawing of earth structures. Geotechnical design of pile foundation and deep stabilization of foundation.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (5 h), design (60 h) and modelling assignments (70 h).

Target group:

Master students in the Civil Engineering program

Prerequisites and co-requisites:

The required prerequisite: 485301A Basics of Geotechnics and 485303A Soil Mechanics. Also recommended: 485201A Building information modeling and CAD, 485304S Fundamentals of Civil Engineering, 485302A Foundation Engineering, 485306S Geoenvironmental Engineering.

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Passing the course requires solving the given assignments and writing reports about them. The assignments are solved with computer modelling, which requires constant participation to the lectures.

Grading:

The course utilizes verbal grading scale pass/fail.

Person responsible:

University teacher Anne Tuomela

Working life cooperation:

The course includes guest lectures from an international consulting and engineering company.

Other information:

This course will replace course 488111S Modelling in Geoenvironmental Engineering

485306S: Geoenvironmental Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Tuomela, Anne Marika

Opintokohteen kielet: Finnish

Leikkaavuudet:

488131S Geoenvironmental Engineering 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during period 1

Learning outcomes:

The student knows norms and instruction which are related to contaminated sites. The students can choose the suitable remediation technique for contaminated soil. The student can calculate contaminant transport in soils. The student can also design geotechnical structures of industrial and domestic landfills and evaluate the needs for remediation of contaminated soils. Student knows how to use by-products from industry in different soil construction applications.

Contents:

Norms and instructions, a project work where student will discover a contaminated soil and make a proposal for remediation technique, properties of soil materials and industrial by-products, basis of geotechnical design for landfill environment, structures of dams and impoundments, geoenvironmental challenges in mining, remote sensing as a tool for geoenvironmental applications.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (44 h), group work (60 h) and independent work (31 h)

Target group:

Master students in the Civil Engineering program

Prerequisites and co-requisites:

485301A Basics of Geotechnics

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Written exam and exercises

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Anne Tuomela

Working life cooperation:

The course includes a visit to a site decided later and also guest lectures from professionals in industry and administration.

Other information:

This course will replace course 488131S Geoenvironmental Engineering

488127S: Field measurements, site investigations and geotechnical tests, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Ali Torabi Haghghi

Opintokohteen kielet: English

Leikkaavuudet:

488118S Laboratory Exercises and Field Measurements in Environmental Engineering 10.0 op

ECTS Credits:

5 ECTS /133 hours of work

Language of instruction:

English

Timing:

The course unit is given during periods 1 and 2.

Learning outcomes:

Upon completion the student should be able to design field measurements and understand the quality of sampling and measurements in the field of environmental engineering. The student also improves skills of working in a team of fellow students to share expertise and execution responsibilities. The student understands the laboratory testing procedures and the associated parameters that help in estimating the soil mechanics and Geotechnical engineering and. The student knows how to use different methods for field measurement and sampling in water and geotechnical issues. The student can take considering the safety during the laboratory works and field measurements. After the course, the student can write detailed engineering reports.

Contents:

In the lectures: Units of measurements, error and mistake in laboratory works and field measurements, random and systematic error, precision and accuracy in laboratory work, planning field works, description of measuring site, securing results and material, sample preservation, subsoil exploration, direct & indirect methods of exploration, disturb and undisturbed samples, safety in field work, introduction on surveying, levelling, map and scale, different tests in soil mechanics laboratory.

Laboratory works in soil mechanics and geotechnical engineering: sieving test, hydrometer test, Atterberg limits test, proctor test, direct shear box test and oedometer test.

In the field: Working with GPS. Levelling and collecting data for preparing topography map. Soil sampling, surface water and groundwater sampling, Measuring velocity and discharge of river by using current meter and tracer.

Mode of delivery:

Face-to-face teaching, laboratory working

Learning activities and teaching methods:

Lectures (16 h), Fieldwork (20 h), Lab-work (9 h), Group work (88 h)

Target group:

Master students in the Water and Geo Engineering and Water and Environment study options

Prerequisites and co-requisites:

The required prerequisite is the completion of the following course prior to enrolling for the course unit: 488115A Geomechanics

Recommended or required reading:

Field measurements and Laboratory work instruction, lecture materials

Assessment methods and criteria:

Two exams (40%), Report (50%) and assignments (10%), passing the exam is requirement for passing the course

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University Teacher Ali Torabi Haghighi

Working life cooperation:

No

485401A: Basics of Traffic Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Virve Merisalo

Opintokohteen kielet: Finnish

Leikkaavuudet:

488151A Basics of Traffic Engineering 5.0 op

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

Period 1

Learning outcomes:

By completing the course the student knows the basics of modes of transport, the significance of traffic and transportation to society, traffic planning and research methods, transport economics and the external effects of transport.

Contents:

Modes of transport, Need for traffic and transportation, Transport planning and research, Economical and environmental impacts of traffic, Traffic safety.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 22 h, self-study 85 h

Target group:

Students in the Bachelor's Programme of Civil Engineering

Prerequisites and co-requisites:

-

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Examination and exercises

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Virve Merisalo

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Virve Merisalo

Opintokohteen kielet: Finnish

Leikkaavuudet:

488152S Advanced Course in Traffic Engineering 5.0 op

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

Period 2

Learning outcomes:

By completing the course the student understands the basics of transport policy and the significance of transport economics to society. The student becomes familiar with traffic safety and is able to analyse the problems of traffic safety and opportunity to improve it.

Contents:

Transport policy, transport economics, traffic safety

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 22 h, self-study 85 h

Target group:

Students in the Master's Programme of Civil Engineering

Prerequisites and co-requisites:

-

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Examination and exercises

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

485403A: Basics of Road Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Veikko Pekkala

Opintokohteen kielet: Finnish

Leikkaavuudet:

488153A Basics of Road Engineering 5.0 op

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

Period 3

Learning outcomes:

By completing the course student understands the basics of road design and construction, is able to calculate structure layers of road and is familiar with the maintenance of roads

Contents:

Road and street planning and design, lining, roads structure, maintenance of roads, basics of earthworks

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 22 h, self-study 85 h

Target group:

Students in bachelor's programmes of environmental engineering

Prerequisites and co-requisites:

-

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Exam, assignment and seminar work

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Veikko Pekkala

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester during period 4

Learning outcomes:

By completing the course student is familiar with road structure and function, structural modernisation, pavements and the basics of earthworks. He/she is also able to design road computer aided.

Contents:

Function of road structure, road damaging, structural modernisation, pavements, Road design and construction

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 32 h, self-study 75 h

Target group:

Students in the master's programmes of environmental engineering

Prerequisites and co-requisites:

485403A Basics of Road Engineering

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Exam and assignment(s)

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

485115S: Advanced topics on concrete technology, 5 op

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466110S	Advanced topics on concrete technology	5.0 op
460156S-01	Advanced Course in Concrete Technology I, examination	0.0 op
460156S-02	Advanced Course in Concrete Technology I, laboratory exercises	0.0 op
460156S	Advanced Topics Concrete Technology I	4.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Autumn semester, periods 1-2

Learning outcomes:

After completing the course the student is able to manage the goal of the subject by broadening the knowledge to new concrete types and their design methods, testing and application conditions and also on concrete with special properties such as e.g. high-quality, high strength and self-compressing. He can also explain how to assess the structural condition of concrete

Contents:

Durability and defects of concrete structures, high-strength concrete, self-compacting concrete. Processing of secondary raw materials for the preparation of special concrete, utilization of fly ash, slag and dust

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, excercises, case studies, laboratory sessions and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466109S Concrete technology

Recommended optional programme components:

The material that is in English will be distributed at the lectures 1) Lecture notes (mainly in Finnish) 2) BY 42, betonijulkisivun kuntotutkimus 2002, Suomen Betoniyhdistys. 3) BY 41, betonirakenteiden korjausohjeet, 2007, Suomen Betoniyhdistys. 4) IVO-B-13/91. 1991. Korkealujuusbetoni, uusi materiaali voimalaitosrakentamiseen, A. Ipatti. Imataran Voima Oy. 5) Itsetiivistyvä betoni, 2004, Suomen Betonitieto Oy. 6) Suomen betoniyhdistys. Betoninormit 2004 : BY 50. Helsinki : Suomen betonitieto. 7) BY 51, betonirakenteiden käyttöikäsuunnittelu 2007. Suomen Betoniyhdistys

Assessment methods and criteria:

Passed laboratory exercises and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

485116S: Advanced topics on design of concrete structures, 5 op

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

460149S-01	Advanced Course in Design of Concrete Structures I, examination	0.0 op

ECTS Credits:

5 ETCS / 135 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the autumn semester, during periods 1 and 2.

Learning outcomes:

Upon completion of the course, the student will be able to design reinforced concrete structures and pre-stressed concrete beam structures according to EN standards.

Contents:

Plastic analysis of concrete structures. Strut and tie method. Deep beams. Corbels and bearings. Theory of tensioned structures. Losses in prestress. Limit state design of pre-stressed concrete beams.

Mode of delivery:

Face-to-face and independent study.

Learning activities and teaching methods:

Lectures and exercises 48 h, project work 24 h and independent work 63 h.

Target group:

Master level students in the study areas of structural engineering in the degree program of civil engineering.

Prerequisites and co-requisites:

Good knowledge of statics, solid mechanics, concrete structures, concrete technology, structural engineering and analysis methods.

Recommended optional programme components:

The course supports advanced courses in structural engineering and life-long learning.

Recommended or required reading:

Nykyri: by 211 Betonirakenteiden suunnittelun oppikirja, osa 1, 2013 ja osa 2, 2014; Leskelä: by 210 Betonirakenteiden suunnittelu ja mitoitus 2008; EN 1992-1-1, EN 1992-1-2 ja muut EN-standardit soveltuvien osin; by 51 Betonirakenteiden käyttöikäsuunnittelu 2007; by 47 Betonirakentamisen laatuohjeet 2007; RIL 229-2-2006 Rakennesuunnittelun asiakirjaohje, Mallipiirustukset ja -laskelmat; RIL 202-2011/BY 61-2011 Betonirakenteiden suunnitteluohje; Martin, Purkiss: Concrete Design to EN 1992, Elsevier, 2nd ed. 2006. Materials from lectures and exercises.

Assessment methods and criteria:

The course is passed by partial exams during the course or by a final exam. A project work is also required.

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

Senior research fellow Antti H. Niemi

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Filip Fedorik

Opintokohteen kielet: English

Leikkaavuudet:

466112S Advanced topics on building physics 5.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

English

Timing:

Autumn, periods 1-2

Learning outcomes:

After completing the course the student can explain the different physical phenomena that affect the temperature and moisture behaviour of different structures. He can also study numerically the building-physical behaviour of structures and structural systems. He can use different software to simulate the behaviour and solve problems. He can assess the potential mould risk of structure based on temperature and relative humidity values measured on site

Contents:

Computational modelling and analysis methods of building-physical behavior of structures. Site measurements. Mould index.

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, exercises, case studies and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466101A Introduction to building construction, 466111S Building physics

Recommended or required reading:

The material that is in English will be distributed at the lectures

Assessment methods and criteria:

Exercises and homework

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466116S	Information modelling and automation in building construction and maintenance	2.5 op
460182S-01	Automation of Building and Bridge Construction, Examination	0.0 op
460182S-02	Automation of Building and Bridge Construction, Exercises	0.0 op
460182S	Automation of Building and Bridge Construction	5.0 op

ECTS Credits:

5 ECTS

Language of instruction:

Finnish

Timing:

Periods 3 and 4

Learning outcomes:

The course gives understanding about the possibilities of information modeling and automation in building construction, use and maintenance. Also it develops abilities to apply information modeling and automation in building construction and maintenance. Student will learn more about theories of information modeling and automation, different applications, software and systems, and possibilities of advanced information transferring techniques.

Contents:

Information modeling, automation and robotics in the initial data surveys, design, control of construction, as-built surveys and use and facilities management of buildings. 3-D coordinate systems in building construction process. Creation of measurement base for sites. 3-D measurement techniques and systems (robotic total station, UAS, 3-D fast surveying and modeling methods). Least squares optimization based redundancy and adjustment. Information modeling based design methods and software applications. Manufacturing automation in the factories for building components. Automated ground improvement methods and 3D-systems. Automated site construction systems and robots. Augmented reality methods and applications. Advanced maintenance methods and systems for buildings. Cloud based use and facilities management. 3-D city models. National and international Building Information Modeling (BIM) guidelines. Open information transfer formats and standards.

Learning activities and teaching methods:

Lectures, self study, exercises, site excursions, exam.

Prerequisites and co-requisites:

No specific prerequisites

Recommended optional programme components:

Information modelling and automation in infrastructure construction and maintenance

Recommended or required reading:

Will be announced in the class.

Grading:

Opintojaksolla käytetään numeerista arviointiasteikkoa 1-5. Numeerisessa asteikossa nolla merkitsee hylättyä suoritusta.

Leikkaavuudet:

485121S Numerical methods in structural engineering 5.0 op

466103A Project work in structural engineering 5.0 op

ECTS Credits:

5 ECTS / 135 hours of work

Language of instruction:

Lectures in Finnish. Lecture notes in English. Foreign students can participate by studying independently the material and by carrying out the exercise work and exam in English.

Timing:

The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course during the 4th year of studies.

Learning outcomes:

Ability to carry out structural analysis by using advanced numerical simulation technology. Knowledge of and ability to develop methods for verification of model data and accuracy of numerical solutions. Ability to present results of calculations in writing. Knowledge of different variational and energy principles of mechanics and ability to apply them in structural analysis. Knowledge of the properties of different structural models and ability to formulate an appropriate and validated mathematical model for specific problems. Knowledge of some special features concerning the analysis and dimensioning of steel, concrete and timber structures. Knowledge of special features of plate and shell structures from the viewpoint of structural design.

Contents:

Introduction. Simulation governance. Principles of elasticity theory and calculus of variations. Bar, beam and arch structures. Plate and shell structures. Structural dynamics and stability.

Mode of delivery:

Face-to-face and independent study.

Learning activities and teaching methods:

Lectures and exercises 48 h, project work 24 h and independent work 63 h.

Target group:

Master level students in the study areas of structural engineering and engineering mechanics in the degree programs of civil and mechanical engineering, respectively.

Prerequisites and co-requisites:

Basic knowledge of statics, solid mechanics and differential & integral calculus.

Recommended optional programme components:

The course supports advanced courses in structural engineering and engineering mechanics.

Recommended or required reading:

Lecture notes and other electronic material.

Assessment methods and criteria:

The course is passed by partial exams during the course or by a final exam. A project work is also required.

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Other information:

Substitutes the course 466108S Advanced topics on design of concrete structures in academic year 2020-21.

485115S: Advanced topics on concrete technology, 5 op

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466110S	Advanced topics on concrete technology	5.0 op
460156S-01	Advanced Course in Concrete Technology I, examination	0.0 op
460156S-02	Advanced Course in Concrete Technology I, laboratory exercises	0.0 op
460156S	Advanced Topics Concrete Technology I	4.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Autumn semester, periods 1-2

Learning outcomes:

After completing the course the student is able to manage the goal of the subject by broadening the knowledge to new concrete types and their design methods, testing and application conditions and also on concrete with special properties such as e.g. high-quality, high strength and self-compacting. He can also explain how to assess the structural condition of concrete

Contents:

Durability and defects of concrete structures, high-strength concrete, self-compacting concrete. Processing of secondary raw materials for the preparation of special concrete, utilization of fly ash, slag and dust

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, exercises, case studies, laboratory sessions and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466109S Concrete technology

Recommended optional programme components:

The material that is in English will be distributed at the lectures 1) Lecture notes (mainly in Finnish) 2) BY 42, betonijulkisivun kuntotutkimus 2002, Suomen Betoniyhdistys. 3) BY 41, betonirakenteiden korjausohjeet, 2007, Suomen Betoniyhdistys. 4) IVO-B-13/91. 1991. Korkealujuusbetoni, uusi materiaali voimalaitosrakentamiseen, A. Ipatti. Imataran Voima Oy. 5) Itsetiivistyvä betoni, 2004, Suomen Betonitieto Oy. 6) Suomen betoniyhdistys. Betoninormit 2004 : BY 50. Helsinki : Suomen betonitieto. 7) BY 51, betonirakenteiden käyttöikäsuunnittelu 2007. Suomen Betoniyhdistys

Assessment methods and criteria:

Passed laboratory exercises and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

485113S: Advanced topics on building physics, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Filip Fedorik

Opintokohteen kielet: English

Leikkaavuudet:

466112S Advanced topics on building physics 5.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

English

Timing:

Autumn, periods 1-2

Learning outcomes:

After completing the course the student can explain the different physical phenomena that affect the temperature and moisture behaviour of different structures. He can also study numerically the building-physical behaviour of structures and structural systems. He can use different software to simulate the behaviour and solve problems. He can assess the potential mould risk of structure based on temperature and relative humidity values measured on site

Contents:

Computational modelling and analysis methods of building-physical behavior of structures. Site measurements. Mould index.

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, exercises, case studies and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466101A Introduction to building construction, 466111S Building physics

Recommended or required reading:

The material that is in English will be distributed at the lectures

Assessment methods and criteria:

Exercises and homework

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

Filip Fedorik

466105S: Design of Steel Structures, 6 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Kangaspuoskari, Matti Johannes

Opintokohteen kielet: Finnish

Leikkaavuudet:

485118S	Design of Steel Structures	5.0 op
485108A	Design of Steel Structures and Steel Construction	5.0 op
ay466105S	Design of Steel Structures (OPEN UNI)	6.0 op
460127S-01	Design of Steel Structures, examination	0.0 op
460127S-02	Design of Steel Structures, exercise work	0.0 op
460125A	Introduction to Design of Steel Structures	4.0 op
460125A-01	Introduction to Design of Steel Structures, examination	0.0 op
460125A-02	Introduction to Design of Steel Structures, exercise work	0.0 op
460127S	Design of Steel Structures	4.0 op

ECTS Credits:

6 ECTS

Language of instruction:

Finnish

Timing:

Periods 1 and 2

Course 485108A replaces this course in academic year 2021-2022.

Learning outcomes:

After completing the course the student is able to explain the basic nature of the crystalline structure of steel and its elastomeric material model. He / she is able to evaluate the effect of alloys, heat treatment and welding on the mechanical properties of steel. He / she can explain what happens to steel in the event of a fire and the basics of fire design. The student is able to design the joints of a steel structure frame and can dimension the steel structure under different load combinations. He / she is able to analyze stability problems and can explain inaccuracies and second order effects.

Contents:

The following topics are covered during the course: Ferrous metals and their properties. Principles of Eurocodes. Design of simple steel structure under base loading cases and loading combinations. Corrosion. Design of joints in steel structures. Composite structures with steel member. Section classification. Effective cross-section. Cross-sections with stiffeners. Steel members in bending and axial compression. Buckling, lateral torsional buckling, and torsion.

Mode of delivery:

Face-to-face.

Learning activities and teaching methods:

Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:

Degree students who study steel structure design.

Prerequisites and co-requisites:

466102A Introduction to Structural Design. Key notes in courses Statics, Strength of Materials I, Strength of Materials II, Energy principles and Their Use in Beam Structures, and Plates and Shells and Mechanics of materials

Recommended or required reading:

Lecture notes (in Finnish). Eurocodes 1990-1999.

Assessment methods and criteria:

Three midterm exams or one final exam is required. One design exercise is required.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Matti Kangaspuoskari

466106S: Advanced topics on design of steel structures, 6 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Kangaspuoskari, Matti Johannes

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay466106S	Advanced topics on design of steel structures (OPEN UNI)	6.0 op
460128S-01	Advanced Course in Design of Steel Structures I, examination	0.0 op
460128S-02	Advanced Course in Design of Steel Structures I, exercise work	0.0 op
460128S	Advanced Topics on Design of Steel Structures I	4.0 op

ECTS Credits:

6 ECTS

Language of instruction:

Finnish

Timing:

Periods 3 and 4

Learning outcomes:

The student can explain the basics of fatigue design of a welded structure. The student is able to design sheet metal structures and welded plate beam structures. He / she is able to analyze and design steel structures and their joints. They are able to analyze dynamically loaded structures and to evaluate the effect of vibrations on the functionality and usability of structures.

Contents:

The following topics are covered during the course: Steel structure under fatigue load. Fracture toughness. Stability and bracing of a steel frame building. Fire design. Plated structural elements with stiffeners. Elements resistance to transverse forces. Cold-formed members. Mechanical vibrations. Seismic design. Chimneys. Crane supporting structures. Accidental design situations and progressive collapse.

Mode of delivery:

Face-to-face.

Learning activities and teaching methods:

Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:

Degree students who study steel structure design.

Prerequisites and co-requisites:

460117A Introduction to Structural Design and 466105S Design of Steel Structures. Key notes in courses Statics, Strength of Materials I, Strength of Materials II, Mechanics of materials and Mechanical Vibrations.

Recommended or required reading:

Lecture notes (in Finnish). Eurocodes 1990-1999.

Assessment methods and criteria:

Three midterm exams or one final exam is required. One design exercise is required.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Matti Kangaspuoskari

461112S: Mechanical vibrations, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Laukkanen, Jari Jussi

Opintokohteen kielet: Finnish

Leikkaavuudet:

461019S-01	Mechanical Vibrations, examination	0.0 op
461019S-02	Mechanical Vibrations, exercises	0.0 op
461019S	Mechanical Vibrations	6.0 op

ECTS Credits:

5 ects /135 hours of work

Language of instruction:

Finnish

Timing:

Lectures and exercises during the periods 3 - 4.

Learning outcomes:

The aim of this course is to familiarize students with the principles and phenomena of mechanical vibrations and show how different vibrations can be represented by a theoretical model and how detrimental vibrations can be avoided in structures and machines.

Learning outcomes: After the course, the student is capable of forming the equations of motion for a single and multi-degree-of-freedom systems and continuous models and is able to solve them using analytical, numerical and approximate methods. Moreover, the student is able to use finite element methods to solve basic vibration problems.

Contents:

Basic principles; Vibrations of single degree-of-freedom systems; Vibrations of multi-degree-of-freedom systems; Torsional vibration of a power drive chain; Longitudinal, transverse and torsional vibrations of a beam represented by a continuous model; Some approximation methods; Use of FEM in vibration analysis; Introduction to the theory of balancing; Experimental modal analysis.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

This course will be based on lectures 45 h and exercises 30 h and 45 h self-study during periods 3 – 4 and 15 h for a project work. Students are required to take a final exam or mid-term exams.

Prerequisites and co-requisites:

First year mathematics, Strength of Materials I & II and Dynamics.

Recommended or required reading:

Pramila, A.: Värähtelymekaniikka, Chap. 10: Koneenosien suunnittelu 4, WSOY, 1985. James, M.L. & al.: Vibration of Mechanical and Structural Systems: With Microcomputer Applications, Harper & Row, 1989.

Assessment methods and criteria:

The grade of the course is based on midterm exams or a final examination. The student must pass the exercises before taking the examination.

Grading:

Numerical grading scale 1-5.

Person responsible:

Jari Laukkanen

485307S: Cold Climate Engineering, 5 op

Voimassaolo: 01.08.2020 -

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Anssi Rauhala

Opintokohteen kielet: English

Leikkaavuudet:

488132S Cold Climate Engineering 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester, during period 3

Learning outcomes:

After the course the student knows how permafrost and seasonally frozen ground affect different aspects of construction. The student can perform frost heave calculations and evaluate the need for ground frost insulation. The student knows how winter conditions are considered in road and street design. Student knows the basics of geothermal energy and energy efficient structures.

Contents:

Permafrost and seasonally frozen ground. Frost heave and ground frost insulation. Winter conditions related road, street and water supply design criteria. Geothermal energy. Energy efficient structures.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures and exercises (28 h), independent study (107 h).

Target group:

Master's students in Civil Engineering

Prerequisites and co-requisites:

485301A Basics of Geotechnics, 485102A Introduction to structural design

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Examination and assignment(s)

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Ansi Rauhala

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Autumn semester, periods 1-2

Learning outcomes:

After completing the course the student is able to make 3D models of buildings and detail the connections between building elements and components. He can model different building materials and is familiar with one commercial software.

Contents:

Modeling concrete and steel structures. Connections. Macros, Drawings.

Mode of delivery:

Face-to-face

Learning activities and teaching methods:

Lectures, exercises and self directed learning

Target group:

Students studying structural engineering

Recommended or required reading:

The material that is in English will be distributed at the lectures

Assessment methods and criteria:

485002S: Advanced Practical Training, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Advanced Studies

Laji: Practical training

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

477005S Advanced Practical Training 5.0 op

460004S Practical Training II 5.0 op

ECTS Credits:

5 ECTS, 2 months working full-time

Language of instruction:

Finnish or English

Timing:

Student usually works in summer time.

Learning outcomes:

During the advanced practical training the student is exposed to his/her working environment from the point of view of his/her studies and becomes acquainted with another possible future job or to a different assignment already in a familiar working environment. The student can identify the problems of the working environment and can solve them. The student can apply theoretical knowledge in practical tasks. The student identifies the tasks appropriate for the Master of Science in Technology at his/her workplace.

Mode of delivery:

Working as employee

Target group:

Master's students in Civil Engineering

Assessment methods and criteria:

Student has to show original references and leave the application. In addition she/he has to participate to seminar where she/he reports own summer job. In reference must be training time period and duties.

Grading:

Verbal scale Passed/Failed

Person responsible:

Saara Luhtaanmäki

Working life cooperation:

Yes.

461107A: Finite Element Methods I, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Lumijärvi, Jouko Veikko Juhani

Opintokohteen kielet: Finnish

Leikkaavuudet:

461033A	Finite Element Methods I	3.5 op
461033A-01	Finite Element Methods I, examination	0.0 op
461033A-02	Finite Element Methods I, exercises	0.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Lectures and exercises, periods 1.-2.

Learning outcomes:

The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:

The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:

Face-to-face teaching.

Learning activities and teaching methods:

Lectures and exercises take place during periods 1.-2.

Target group:

Students of the bachelor's stage of the Mechanical Engineering Degree Programme.

Prerequisites and co-requisites:

Strength of Materials I and II and Fundamentals of mechanical computing and programming

Recommended or required reading:

Lecture notes (in Finnish), N. Ottosen & H. Petersson: Introduction to the Finite Element Method, NAFEMS: A Finite Element Primer, O. C. Zienkiewicz & R. L. Taylor: The Finite Element Method, 4th ed, Vol. 1: Basic Formulation and Linear Problems.

Assessment methods and criteria:

The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

Grading:

Numerical grading scale 1-5.

Person responsible:

Jouko Lumijärvi

461104A: Strength of materials II, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Laukkanen, Jari Jussi

Opintokohteen kielet: Finnish

Leikkaavuudet:

461011A-01	Strength of Materials II, examination	0.0 op
461011A-02	Strength of Materials II, exercises	0.0 op
461011A	Strength of Materials II	7.0 op

ECTS Credits:

5 ECTS

Language of instruction:

Finnish

Timing:

Periods 1-2.

Learning outcomes:

The student can apply fatigue design principles in structural analysis and use fracture mechanics to evaluate the life of simple structures. He / she is also able to solve stability, buckling and buckling bending of rod and beam structures. The student is able to solve curve beam bending state and free and prevented torque situations.

After completing the course, the student will have a general understanding of the different areas of strength and will be able to discuss the potential of strength design with experts in the field.

Contents:

Dimensioning of structures for fatigue. Elements of fracture mechanics. Stability, buckling and buckling of rod and beam structures. Curve bar bending. Free and prevented torsion.

Mode of delivery:

Contact teaching

Learning activities and teaching methods:

Lectures 45 h, exercises 45 h and independent learning 45 h. Homework.

Target group:

Compulsory for Mechanical Engineering Degree students.

Prerequisites and co-requisites:

Statics and Strength of Materials I.

Recommended or required reading:

Pennala, E.: Lujuusopin perusteet, Moniste 407, Otatiето, 1998; Outinen, H., Koski, J., Salmi, T.: Lujuusopin perusteet, Pressus Oy, Tampere, 2000 ;Salmi, T., Virtanen, S.: Materiaalien mekaniikka, Pressus Oy, Tampere, 2008; Ylinen, A.: Kimmo- ja lujuusoppi I ja II. WSOY, 1976;. Bära brista, grundkurs i hållfasthetslära, AWE/Gebers, Stockholm 1979.

Assessment methods and criteria:

The course can be completed with an intermediate exam or a final exam. You can take the exam only after you have successfully completed your homework.

Grading:

The course uses 1-5 numerical grading scale. On a numerical scale, zero indicates a failed performance.

Person responsible:

University Teacher Jari Laukkanen.

30 ects

Language of instruction:

Finnish/English

Timing:

Recommended timing the spring term of the 2nd year of the master level.

Learning outcomes:

Upon completion of the thesis the student recognizes practical problems, she/he be able to create a research plan and research questions. She/He is able to plan the project and manage her/his own work according to the timetable. Student controls different kind of research methods and be able to apply skills learned during master's studies to solving asked research questions. She/he understand practical meanings of solutions, limited and know if there is some useful outputs. The student can also utilize different information sources and critically evaluate the information obtained. The student is able to produce clear and finalized text, in line with technical and scientific writing practices.

Contents:

The student defines the contents of his / her work, consulting the supervisor of the Master's thesis. The responsible person of degree programme accepts the contents, the subject and the topic of the thesis work.

Mode of delivery:

Individual work. The diploma thesis completes the master's degree studies.

Learning activities and teaching methods:

The Master's thesis work is supervised by a staff member of the Faculty and doing with industrial company.

Target group:

Civil Engineering Master's students

Prerequisites and co-requisites:

Master's level studies of Degree programme.

Assessment methods and criteria:

The thesis work is made independently by the student as planned. The thesis work is saved digitally and reviewed through the University of Oulu Laturi electronic thesis (E-thesis) submission system. Final written report will evaluate.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Thesis' supervisor

Working life cooperation:

Working in or with the industrial company.

485990S: Maturity Test, Civil Engineering, 0 op**Voimassaolo:** 01.08.2017 -**Opiskelumuoto:** Advanced Studies**Laji:** Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

ECTS Credits:

0 ects

Language of instruction:

Finnish, Swedish or English.

Timing:

After completion of the master's thesis.

Learning outcomes:

The student can produce text in popular form of the research field and thus show ones familiarity to the field.

Contents:

Depends on the topic of the thesis.

Mode of delivery:

Literary work.

Learning activities and teaching methods:

Exam

Target group:

Master Students of Civil Engineering

Recommended optional programme components:

Will be written after the Master's Thesis has been submitted for review.

Assessment methods and criteria:

Student writes an essay about the topic of the Master's thesis to show a good command of the content of the thesis.

Grading:

Pass or fail

Person responsible:

Supervisor of Thesis

Opettajat: Lahtinen, Hannu Tapio

Opintokohteen kielet: Finnish

Leikkaavuudet:

461035A Heat and Mass Transfer I 3.5 op

ECTS Credits:

5 ETCS / 120 hours of work

Language of instruction:

Lectures in Finnish, foreign students follow the course by reading independently the books in English and taking part to the exercises and exams where all material is given in English.

Timing:

The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:

After the course, the student can explain the principal laws of thermodynamics and their impact on energy conversions. Student can apply the energy balance equations for closed and open systems in the calculation of properties and path functions of different processes. The student can explain the theoretical foundations of combustion engines, gas and vapor power plants, and refrigerators and heat pumps. In addition, student can solve problems regarding fluid flow in pipes and heat and moisture transfer. The course gives fundamental information of thermodynamics and its applications.

Contents:

Heat and moisture transfer and fluid flow in pipes; Principal laws in thermodynamics and basic concepts involved; Applications in production, transformation, transfer and use of energy.

Mode of delivery:

Implemented as Face-to-face -teaching.

Learning activities and teaching methods:

Lectures 30 h / exercises 30 h / independent work of solving homework problems 60 h.

Target group:

Compulsory for candidate degree students of mechanical engineering programme.

Prerequisites and co-requisites:

Now prerequisites required.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Cengel, Y.A. & Boles, M.A., Thermodynamics; An Engineering Approach, Fifth edition in SI-units, 2006;
Cengel, Y.A., Heat Transfer; A Practical Approach, Second edition, 2003.

Assessment methods and criteria:

The course is passed by midterm exams or by a final exam. During the course two midterm exams are arranged. Every week exercises are organized, and part of the exercise problems are left for independent work.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Hannu Lahtinen

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

English

Timing:

Autumn, Periods 1-2

Learning outcomes:

After completing the course the student can explain basic phenomenon of building physics. The student can analyse and describe heat, air and moisture transfer in buildings and also explain main causes of typical moisture damages. The student can explain factors affecting energy efficiency and can calculate the energy efficiency number. The student knows the calculation methods in acoustics.

Contents:

Thermal isolation design. Determination of structure temperature. Moisture transfer and moisture exiting. Airflows in structures. Energy efficiency in buildings. Acoustic design.

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, excercises, case studies, and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466101A Introduction to building construction

Recommended or required reading:

The material that is in English will be distributed at the lectures

- 1) Lecture notes (mainly in Finnish)
- 2) Suomen rakentamismääräyskokoelman osat C1, C2, C3, C4 ja D3.
- 3) Introduction to Building Physics, Hagentoft, C.-E. (2001), ISBN 91-44-01896-7, (As specified in lectures).

Assessment methods and criteria:

Excercises and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

university lecturer Raimo Hannila

Other information:

This course will replace course 466111S Building Physics in Academic year 2020-21.

485022A: Fundamentals of built environment, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Liedes, Hannu Tapani

Opintokohteen kielet: Finnish

Leikkaavuudet:

454541A Built Environment 5.0 op

488142A Environmental legislation and EIA 5.0 op

ECTS Credits:

5 ECTS

Language of instruction:

Finnish

Timing:

Period 4

Learning outcomes:

Having completed the course, the student masters the basics of contemporary environmental legislation. He / she will be familiar with the main features and content of the land use planning process, building legislation and regulations, and environmental legislation as well as related decrees and regulations. The student will be able to identify the steering effects of environmental laws in different environmental projects and to understand the basics of different planning processes and permit procedures and their impact assessment. He / she will be able to search for information and guidance related to environmental legislation and can apply it in a planning and research project.

Contents:

Finnish legal system, environmental legislation (including Land Use and Building Act, Environmental protection Act, Mining Act), international agreements and EU guidance where applicable, land-use planning hierarchy and processes, legal effects, environmental impact assessment (EIA), permit procedures.

Mode of delivery:

The course consists of contact teaching, lectures, project work guidance and presentation of group work. The course is a joint course of the Faculty of Technology in the degree programs of Construction and Civil Engineering, Oulu School of Architecture and Water Resources and Environmental Engineering. The lectures in the course are common to all. The students will make a group work, which will take into account the Learning Objectives of different degree programs. The student chooses the assignment according to his/ her own degree program.

Learning activities and teaching methods:

16 h lectures + 16 h seminars, independent studying. Total 133 h.

Target group:

Students of Construction and Civil Engineering, students of Oulu School of Architecture and students of Water Resources and Environmental Engineering.

Prerequisites and co-requisites:

Students of architecture: 454523A Neighborhood Design. Other units: -.

Recommended optional programme components:

-

Recommended or required reading:

Internet service on legal information Finlex Data Bank where applicable. (<http://finlex.fi>).

Ympäristöoikeuden pääpiirteet (Ekroos, Kumpula 2010, ISBN: 9789510361283) where applicable.

Maankäyttö- ja rakennuslaki 2000. Opas 10 (ISBN 951-731-249-0 (PDF), URN:ISBN:9513739767) where

applicable. Maankäyttö- ja rakennuslaki 2000. Opas 11 (ISBN 951-731-250-4 (PDF), URN:ISBN:9513739775) where applicable. Maankäyttö- ja rakennuslaki 2000. Opas 12. (ISBN 951-731-251-2 (PDF), URN:ISBN:9513739783) where applicable. Lectures.

Assessment methods and criteria:

Assignment (40%), seminars (40 %) and learning diary (20%).

Grading:

Grades 1-5 where 0 is failed.

Person responsible:

University teacher Hannu Liedes, University lecturer Anna-Kaisa Ronkanen and Professor Tarja Outila

Working life cooperation:

The course will be organized in co-operation with different degree programs in the Faculty of Technology and the content of the course will be delivered with experts in different fields. The assignments will be made in interdisciplinary groups. The assignments are problem-based and imitate real-life projects.

Other information:

The student will receive the ECTS credits according to his/ her degree program requirements and/or by his /her own choice, however, the credits will always be recorded for the course for which the assignment was made. In principle the students of Construction and Civil Engineering will get credits for 4855022A Rakennetun ympäristön perusteet, the students of Oulu School of Architecture will get credits for 485022A Rakennettu ympäristö and the students of Water Resources and Environmental Engineering will get credits for 488142A Environmental legislation and EIA. The credits can only be recorded once.

485301A: Basics of Geotechnics, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

488115A Geomechanics 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during period 1

Learning outcomes:

Upon completion this course, the student will understand the fundamentals of Soil mechanics, foundation engineering and soil freezing and thawing.

Contents:

Origins and composition of soils, classification of soils, stress and strains in soils, mechanical properties of soils, bearing capacity of foundations, seepage analyses, freezing and thawing of soils, site investigations and in situ testing.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (30 h) and calculation exercises (10 h) also independent work (95 h)

Target group:

Students in Bachelor programs of civil engineering and environmental engineering

Prerequisites and co-requisites:

No

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures, Principles of Geotechnical Engineering by Das B. M.

Assessment methods and criteria:

Examination

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Anne Tuomela

Working life cooperation:

No

Other information:

This course will replace course 488115A Geomechanics in Academic year 2020-21.

485302A: Foundation Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay485302A	Foundation Engineering (OPEN UNI)	5.0 op
488129S	Foundation Engineering	5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester during period 2

Learning outcomes:

After completing the course, students know the basics of base construction plan, can identify geotechnical dimensioning limit states and use partial factor method. Student can describe different foundation methods, types and principles of typical foundation piles, excavation types, risks and principles of risk management, radon. Student knows the principles of foundation drainage and frost protection. Student knows the basics of how to design piled foundation. Student knows ultimate bearing capacity formula for shallow foundation (Eurocode).

Contents:

The basis of geotechnical design of foundations. Most common foundation types. Dimensioning of piled foundation. Ground improvement. Drainage. Filling and compression. Frost protection. Radon.

Mode of delivery:

Face-to-face teaching.

Learning activities and teaching methods:

Lectures and exercises (28 h), self-study (107 h)

Target group:

Students in bachelor's program of civil engineering

Prerequisites and co-requisites:

485301A basics of Geotechnics

Recommended optional programme components:

-

Recommended or required reading:

Materials delivered in lectures

Assessment methods and criteria:

Exam and assignment(s)

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Veikko Pekkala

Working life cooperation:

No

Other information:

This course will replace course 488129S Foundation Engineering.

485201A: Building information modeling and CAD, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Antti Niemi

Opintokohteen kielet: Finnish

ECTS Credits:

5 ETCS / 135 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the spring semester, during period 4.

Learning outcomes:

Upon completion of the course, student will know the basics of computer-aided modeling and design. The course enables application and development of modeling and design applications and further development as an independent user of various modeling systems and platforms.

Contents:

Principles of geometric and data modeling. Representation of curves and surfaces. Properties of CAD and modelling applications and exercises. Basic algorithms related to geometric and data modelling.

Mode of delivery:

Face-to-face and independent study.

Learning activities and teaching methods:

Lectures and exercises 30 h, independent study and project work 105 h.

Target group:

Bachelor level students in the degree program of civil engineering.

Prerequisites and co-requisites:

Basic course in mathematics.

Recommended optional programme components:

The course supports advanced courses in civil engineering.

Recommended or required reading:

Lecture and exercise material.

Assessment methods and criteria:

Continuous assessment of exercise work and home work.

Grading:

Passed/fail

Person responsible:

Antti H. Niemi and Pekka Rossi

Working life cooperation:

-

Other information:

-

485023A: GIs and geoinformatics, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

494302A GIS and spatial data 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during period 2

Learning outcomes:

After completion the student understands the basics of spatial data and geographical information systems (GIS) including especially the most important coordinate systems, map projections, Finnish map coordinates and satellite positioning, and knows how to visualize spatial data in various ways.

Contents:

The course provides basic information about the presentation and handling of spatially dependent geoscientific data and geographic information systems (GIS). The course considers the basics of spatial data, coordinate systems, map projections and map coordinates, satellite positioning, processing and visualization of spatial data. Computer exercises demonstrate preparation and visualization of geoscientific data in practice.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures and exercises totaling 40 h plus independent study 95 h

Target group:

Bachelor students in civil engineering

Prerequisites and co-requisites:

No specific prerequisites

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures

Assessment methods and criteria:

Examination and computer test

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Anssi Rauhala

Working life cooperation:

No

Other information:

-

485102A: Introduction to structural design, 5 op**Voimassaolo:** 01.08.2019 -**Opiskelumuoto:** Intermediate Studies**Laji:** Course**Vastuuyksikkö:** Civil Engineering field**Arvostelu:** 1 - 5, pass, fail**Opettajat:** Liedes, Hannu Tapani**Opintokohteen kielet:** Finnish**Leikkaavuudet:**

466102A	Introduction to structural design	3.0 op
460117A-01	Introduction to Structural Design, examination	0.0 op
460117A-02	Introduction to Structural Design, exercise work	0.0 op
460117A	Introduction to Structural Design	6.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Autumn semester, periods 1-2

Learning outcomes:

After completing the course the student is able to name technical regulations and instructions, which guide construction. After completing the course students can explicate principle of verifications and plastic theory on structure design and also different loads on structure. Student estimate design loads by calculation and design load effect in structures. Student can describe different structure and bracing systems.

Contents:

Regulations and supervising. The principle of design verification. The loads and effect. The principle of using of eurocode. The principle of plastic theory on on structure design. Structure systems. The joints of structures.

Mode of delivery:

Lecture room teaching

Learning activities and teaching methods:

Lectures and exercises

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

461016A Statics and 460101A Strength of Materials I

Recommended or required reading:

Lecture notes (mainly in Finnish), Finnish law and legislation, National building code of Finland, Eurocode standards

Assessment methods and criteria:

Passed practical works and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

University teacher Hannu Liedes

Other information:

This course will replace course 466102A Rakennesuunnittelun perusteet in Academic year 2020-21.

485105A: Concrete technology, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466109S Concrete technology 5.0 op

460155S-01 Concrete Technology, examination 0.0 op

460155S-02 Concrete Technology, laboratory exercise 0.0 op

460155S Concrete Technology 4.5 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Spring semester, periods 3-4

Learning outcomes:

After completing the course the student is able to specify concrete and the materials from which it is made. They can design normal concrete mixes and identify, describe and carry out the main laboratory tests relevant to the use of concrete on site.

Contents:

Cements and cementitious materials, aggregates for concrete, concrete mix design, properties of fresh and hardened concrete, laboratory tests, specification testing and compliance, environmental exposure classes.

Mode of delivery:

Face-to-face and distance learning

Learning activities and teaching methods:

Lectures, exercises, case studies, laboratory sessions and self directed learning

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

466101A Introduction to building construction

Recommended optional programme components:

466101A Introduction to building construction

Recommended or required reading:

The material that is in English will be distributed at the lectures.

- 1) Lecture notes (mainly in Finnish),
- 2) Järvinen, Maarit. 2004. Betonitekniikan oppikirja : BY 201. Helsinki : Suomen Betonitieto.;
- 3) Suomen betoniyhdistys. Betoninormit 2004: BY 50. Helsinki : Suomen betonitieto;
- 4) Suomen Standardisoimisliitto ry. SFS-Standardisointi:
- 5) SFS-EN Standards

Assessment methods and criteria:

Passed laboratory exercises and exam

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

Jorma Hopia

Other information:

This course will replace course 466109S in Academic year 2020-21.

485106A: Design of concrete structures, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466107S	Design of concrete structures	6.0 op
460147A	Introduction to Design of Concrete Technology	4.0 op
460147A-01	Introduction to Design of Concrete Technology, examination	0.0 op
460147A-02	Introduction to Design of Concrete Technology, exercise work	0.0 op
460148S	Design of Concrete Structures	4.0 op
460148S-01	Design of Concrete Structures I, examination	0.0 op
460148S-02	Design of Concrete Structures I, exercises	0.0 op

ECTS Credits:

5 ects

Language of instruction:

Finnish

Timing:

Lectures and exercising on periods 3 and 4.

Learning outcomes:

Upon completion of the course, the student will be able to design typical reinforced concrete structures to EN-standards.

Contents:

Strength and strain properties of concrete and reinforcing bars, time dependent properties. Limit state design of concrete beams and columns to EN standards. Service life design. Fire design. Anchoring and joints of reinforcing bars. Design of flanged cross sections, walls and wall like beams, and foundations carrying walls and columns.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures and exercises 48 h, project work 24 h and independent work 63 h

Target group:

Bachelor level students in the degree program of civil engineering

Prerequisites and co-requisites:

Basic knowledge of statics, solid mechanics, concrete technology and structural engineering

Recommended or required reading:

Nykyri: by 211 Betonirakenteiden suunnittelun oppikirja, osa 1, 2013 ja osa 2, 2014; Leskelä: by 210 Betonirakenteiden suunnittelu ja mitoitus 2008; EN 1992-1-1, EN 1992-1-2 ja muut EN-standardit soveltuvien osin; by 51 Betonirakenteiden käyttöikäsuunnittelu 2007; by 47 Betonirakentamisen laatuohjeet 2007; RIL 229-2-2006 Rakennesuunnittelun asiakirjaohje, Mallipiirustukset ja -laskelmat; RIL 202-2011/BY 61-2011 Betonirakenteiden suunnitteluohje; Martin, Purkiss: Concrete Design to EN 1992, Elsevier, 2nd ed. 2006. Materials from lectures and exercises.

Assessment methods and criteria:

The course is passed by partial exams during the course or by a final exam. A project work is also required.

Grading:

The course utilises a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Senior research fellow Antti H. Niemi

Other information:

This course will replace course 466107S Design of concrete structures in Academic year 2020-21.

485001A: Practical Training, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Practical training

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS, 3 months working full-time

Language of instruction:

Finnish or English

Timing:

Student usually works in summer time.

Learning outcomes:

During the practical training the student is exposed to his/her working environment from the point of view of his/her studies and becomes acquainted with one of a possible future job. The student can identify the problems associated with the working environment and can propose improvements to them. The student will experience points of contact between working life and studies.

Target group:

Bachelor students of Civil Engineering

Assessment methods and criteria:

Student has to show original references and leave the application and report to tutor teacher. In reference must be training time period and duties.

Grading:

Verbal scale Passed/Failed

Person responsible:

Saara Luhtaanmäki

Working life cooperation:

Yes

1 ECTS /28 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the autumn semester, during periods 1 and 2.

Learning outcomes:

The aim of the course is to introduce new students to the university, academic studies, the department and the studies of his/her degree programme in the faculty of Technology.

Contents:

Issues related to the beginning of the studies. Goals, structure and contents of the studies in the Faculty of Technology. Preparing a personal study plan. Study technique and the library.

Mode of delivery:

Face-to-face teaching.

Learning activities and teaching methods:

Tutorials, information days organized by the faculty and by the degree programmes, independent studying.

Target group:

All first year students in degree programme in Civil Engineering

Prerequisites and co-requisites:

-

Recommended optional programme components:

-

Recommended or required reading:

-

Assessment methods and criteria:

Participation to the tutorials and information sessions and doing the personal study plan. Student have to participate 2 times in Master's Thesis Seminars (485991S) and some exercises topics of Study skills and competences.

031010P: Calculus I, 5 op

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Pauliina Uusitalo

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031010P Calculus I (OPEN UNI) 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish. The course will be lectured also in English.

Timing:

Fall, period 1

Learning outcomes:

Upon completion of the course, the student

- knows how to solve inequalities and equations with absolute value
- identifies the concepts of vector algebra
- can use vector algebra for solving the problems of analytic geometry
- can explain basic characteristics of elementary functions
- is able to analyse the limit and the continuity of the real valued functions of one variable
- can analyse the local minima and maxima of a function
- knows how to find the derivative for a function given with parametric representation
- is able to evaluate the basic calculation of the complex numbers and can rewrite a complex number in its exponential form
- knows the connection between the integral and area
- knows integral techniques such as integration by parts, a substitution method and a partial fraction composition
- can solve problems associated with the differential and integral calculus of the real valued functions of one variable.

Contents:

- Inequalities and absolute value
- Vector algebra and analytic geometry
- Concept of the function and elementary functions
- Monotonicity of the function, the inverse function
- Limit values
- Derivative as limit value of the difference quotient. Derivatives of elementary functions
- The extreme values of a function
- Parameter presentation of the curve, polar coordinates, complex numbers
- Integral function and definite integral, applications
- Integration by parts, substitution method and integration of rational functions

Mode of delivery:

Blended learning, course material is in Moodle learning environment

Learning activities and teaching methods:

Lectures 28 h / Group work 22 h / Self-study 85 h

Target group:

1. year students of technical sciences, mathematics and physics

Prerequisites and co-requisites:

-

Recommended optional programme components:

-

Recommended or required reading:

Grossman, S.I.: Calculus of One Variable; Grossman, S.I.: Multivariable Calculus, Linear Algebra, and Differential Equations (partly); Adams, R.A.: A Complete Course Calculus (partly)

Assessment methods and criteria:

The course is completed with mid-term exams or a final exam. When completed with mid-term exams, exercise assignments are part of the continuous assessment. The assessment of the course is based on the learning outcomes of the course. Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

Person responsible:

Pauliina Uusitalo

Working life cooperation:

The course does not contain working live cooperation.

Other information:

-

031075P: Calculus II, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Pauliina Uusitalo

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031075P Calculus II (OPEN UNI) 5.0 op

031011P Calculus II 6.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish. The course can be completed in English by intermediate exams or by a final exam.

Timing:

Spring semester, period 3

Learning outcomes:

Upon completion of the course, the student is able to examine the convergence of series and power series of real terms, can explain the use of power series e.g. in calculating limits, is able to solve problems related to differential and integral calculus of real and vector valued functions of several variables.

Contents:

Sequences, series, power series and Fourier series of real terms. Differential and integral calculus of real and vector valued functions of several variables.

Mode of delivery:

Online teaching

Learning activities and teaching methods:

Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:

-

Prerequisites and co-requisites:

The recommended prerequisite is the completion of the course 031010P Calculus I.

Recommended optional programme components:

-

Recommended or required reading:

Kreyszig, E: Advanced Engineering Mathematics; Grossman S.I.: Multivariable Calculus, Linear Algebra, and Differential Equations; Adams, R.A.: A Complete Course Calculus.

Assessment methods and criteria:

Intermediate exams or a final exam. The exams are remote exams. It is possible to take exams also at the university.

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

031076P: Differential Equations, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Ruotsalainen Keijo

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031076P	Differential Equations (OPEN UNI)	5.0 op
800320A	Differential equations	5.0 op
031017P	Differential Equations	4.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the spring, during period 4. It is recommended to complete the course at the 1st spring semester.

Learning outcomes:

The students can apply differential equations as a mathematical model. They can identify and solve various differential equations and they have knowledge on basic solvability of differential equations. The student can use the Laplace transform as a solution method.

Contents:

Ordinary differential equations of first and higher order.
Laplace transform with applications to differential equations.

Mode of delivery:

Online teaching, Stack/Moodle digital learning environment

Learning activities and teaching methods:

Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:

1. year students of engineering, mathematics and physics.

Prerequisites and co-requisites:

The recommended prerequisite is the completion of the course Calculus I.

Recommended optional programme components:

-

Recommended or required reading:

Recommended literature: Kreyszig, E: Advanced Engineering Mathematics;

Assessment methods and criteria:

The course can be completed by intermediate exams (2 exams) or by a final exam.
Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

Person responsible:

Keijo Ruotsalainen

031021P: Probability and Mathematical Statistics, 5 op

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Jukka Kemppainen

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031021P Probability and Mathematical Statistics (OPEN UNI) 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

Spring semester, period 3

Learning outcomes:

After completing the course the student

1. knows the key concepts of probability and the most important random variables,
2. will be able to use them in calculating probabilities and parameters of probability distributions,
3. is capable of analyzing statistical data by calculating interval and point estimates for the parameters,

4. will be able to formulate statistical hypotheses and test them,
5. knows the basics of linear regression.

Contents:

The key concepts of probability, random variable, parameters of probability distributions, estimation of parameters, hypothesis testing, regression analysis.

Mode of delivery:

Online teaching

Learning activities and teaching methods:

Lectures 28 h/Exercises 20 h/Self study 87 h.

Target group:

The students in the engineering sciences. Other students are welcome, too.

Prerequisites and co-requisites:

The recommended prerequisites are the course 031010P Calculus I and some parts of the course 031075P Calculus II.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Milton, J.S., Arnold, J.C. (1992): Introduction to Probability and Statistics.

Assessment methods and criteria:

Intermediate exams or a final exam. The exams are remote exams. It is possible to take exams also at the university.

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

Vastuuyksikkö: Applied Mathematics and Computational Mathematics

Arvostelu: 1 - 5, pass, fail

Opettajat: Matti Peltola

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay031078P Matrix Algebra (OPEN UNI) 5.0 op

031019P Matrix Algebra 3.5 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the autumn, during period 2. It is recommended to complete the course at the 1st autumn semester.

Learning outcomes:

The student is able to apply arithmetic operations of matrices and can solve system of linear equations by matrix methods and can apply matrix factorizations to find the solution of the system of linear equations. The student is able to recognize the vector space and understands the concepts of basis and dimension of a vector space and can analyse matrices by the parameters, vectors and vector spaces of matrices. He /She knows how to calculate determinant, eigenvalues and eigenvectors of a square matrix, and is able to diagonalize matrices and apply diagonalization to the simple problems.

Contents:

1. Vectors and matrices 2. Systems of linear equations. 3. Matrix factorizations. 4. Vector spaces. 5. The rank, nullity, row space and the column space of a matrix. 6. The determinant of a matrix. 7. Eigenvalues and eigenvectors of a matrix. 8. The diagonalization with applications.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:

1. year students of technical sciences, mathematics and physics.

Prerequisites and co-requisites:

-

Recommended optional programme components:

-

Recommended or required reading:

Recommended literature: Grossman, S.I: Elementary Linear Algebra; David C. Lay: Linear Algebra and Its Applications.

Assessment methods and criteria:

The course can be completed by intermediate exams (2 exams) or by a final exam. Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail

780109P Basic Principles in Chemistry 4.0 op

ECTS Credits:

5 ECTS credits / 134 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the autumn semester, during period 1

Learning outcomes:

Upon completion of the course, the student will be able to display an understanding of basic chemistry phenomenon; equilibrium of acids and bases, chemical equilibrium, redox reactions and stoichiometry.

Contents:

Introduction to chemistry, stoichiometry, redox reactions, chemical equilibrium, the equilibrium of acid and bases, buffer solutions, titration, thermodynamics.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

40 hours of lectures and 94 hours of self-study

Target group:

Biology, Geology, Process Engineering, Environmental Engineering compulsory.
Geography, optional.

Prerequisites and co-requisites:

The compulsory course in upper secondary school chemistry (1st course)

Recommended optional programme components:

The course is not included in the 25 ECTS credits entity of chemistry!

Recommended or required reading:

Tro, N.J., Principles of Chemistry. A Molecular Approach, Pearson, 3. edition, 2016

Assessment methods and criteria:

Final examination.

Grading:

The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

761119P: Electromagnetism 1, 5 op

Voimassaolo: 01.08.2017 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Field of Physics

Arvostelu: 1 - 5, pass, fail

Opettajat: Timo Asikainen

Opintokohteen kielet: Finnish

Leikkaavuudet:

761113P-01 Electricity and magnetism, lectures and exam 0.0 op

761113P-02 Electricity and magnetism, lab. exercises 0.0 op

761113P Electricity and magnetism 5.0 op

766319A Electromagnetism 7.0 op

761103P Electricity and Magnetism 4.0 op

ECTS Credits:

5 ECTS credits / 133 hours of work

- 761119P-01, Lectures and exam (4 cr)

- 761119P-02, Lab. exercises (1 cr)

Language of instruction:

Finnish

Timing:

Second fall term

Learning outcomes:

The student will be able to understand the basic concepts of electromagnetism and can apply this understanding to solve problems related to electromagnetism.

Contents:

Basic principles of electromagnetic phenomena and their physical and geometric interpretation. More detailed contents will be presented later.

Mode of delivery:

face-to-face teaching

Learning activities and teaching methods:

Lectures 32 h, 7 exercises (14 h), 2 laboratory exercises (3 hours/exercise), self-study 83 h

Target group:

For the students of the University of Oulu.

Prerequisites and co-requisites:

Knowledge of vector calculus and basics of differential and integral calculus.

Recommended optional programme components:

No alternative course units or course units that should be completed simultaneously.

Recommended or required reading:

Text book: H.D. Young and R.A. Freedman: University physics, Addison-Wesley, 13. ed., chapters 21-31. Also other editions can be used. Lecture material in Finnish.

Assessment methods and criteria:

Both parts (761119P-01 and 761119P-02) will be graded separately. The final grade of the course is the weighted average of the grades of part 1 (4 cr) and part 2 (1 cr).

761119P-01: Three small midterm exams or final examination

761119P-02: Two laboratory exercises

461102A: Statics, 5 op**Voimassaolo:** 01.08.2015 -**Opiskelumuoto:** Intermediate Studies**Laji:** Course**Vastuuyksikkö:** Field of Mechanical Engineering**Arvostelu:** 1 - 5, pass, fail**Opettajat:** Lahtinen, Hannu Tapio**Opintokohteen kielet:** Finnish**Leikkaavuudet:**

ay461102A	Statics (OPEN UNI)	5.0 op
461016A-01	Statics, examination	0.0 op
461016A-02	Statics, exercises	0.0 op
461016A	Statics	5.0 op

ECTS Credits:

5 ETCS / 149 hours of work

Language of instruction:

Lectures in Finnish, foreign students follow the course by reading independently the books in English and taking part to the exercises and exams where all material is given in English.

Timing:

The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 1st autumn semester.

Learning outcomes:

After the course, the student can calculate forces and moments of loaded structures using equations of vector algebra and trigonometry. He/she can draw a free body diagram of the force system and then solve the unknown forces by using equations of equilibrium. He/she can determine resultants from uniformly distributed loads and apply Coulomb's law of friction in the problem equilibrium. The student can solve problems of internal and external forces of particle systems and rigid body systems in case of static equilibrium. Especially, he/she can draw shear force and bending moment diagrams for beam structures.

Contents:

Fundamental laws and concepts in statics. Force systems and their treatment. Equilibrium of particles and rigid bodies. Static forces in isostatic structures such as beams, frames, cables and trusses. Friction.

Mode of delivery:

Implemented as Face-to-face -teaching.

Learning activities and teaching methods:

Lectures 55 h / exercises 42 h / independent work of solving homework problems 52 h.

Target group:

Compulsory for candidate degree students of mechanical engineering programme.

Prerequisites and co-requisites:

Now prerequisites required.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Salmi, T.: Statiikka, Pressus Oy, Tampere 2005; Beer, F., Johnston, R.: Vector Mechanics for Engineers, Statics, McGraw-Hill Book Company, 1996.

Assessment methods and criteria:

In the course acceptable homework and midterm exams / final exam are required. This course utilizes continuous assessment. There are four midterm exams, of which the last one is at the same time a final exam. Homework contain every week three problems that are marked. The student is allowed to participate to a final exam, when the homework is accepted.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Hannu Lahtinen

Other information:

The course gives ability for understanding static equilibrium, ability for determining force balance in structures and readiness for later studies.

461103A: Strength of materials I, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Lahtinen, Hannu Tapio

Opintokohteen kielet: Finnish

Leikkaavuudet:

461010A-01	Strength of Materials I, examination	0.0 op
461010A-02	Strength of Materials I, exercises	0.0 op
461010A	Strength of Materials I	7.0 op

ECTS Credits:

5 ETCS / 149 hours of work

Language of instruction:

Lectures in Finnish, foreign students follow the course by reading independently the books in English and taking part to the exercises and exams where all material is given in English.

Timing:

The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 1st spring semester.

Learning outcomes:

After the course, the student can determine stresses and strains of structures under loading. He/she can change the general stress and strain states from one coordinate system to another and can also apply constitutive equations in calculations. The student can dimension typical structures such as tension and compression bars, torsion bars and straight beams.

Contents:

Purpose and goals of strength of materials. Experimental elastic properties and strength of steel. Tension and compression of straight bars. Round torsion bar under shear force and torsion loads. Stresses and deflection curves in straight beams under bending moments. Stress state, strain state and constitutive equations, principal stresses, Mohr's circle. Stress hypotheses.

Mode of delivery:

Implemented as Face-to-face -teaching.

Learning activities and teaching methods:

Lectures 55 h / exercises 42 h / independent work of solving homework problems 52 h.

Target group:

Compulsory for Bachelor's degree students of mechanical engineering programme.

Prerequisites and co-requisites:

The recommended preceding course is 461102A Statics.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Salmi, T., Pajunen, S.: Lujuusoppi, Pressus Oy, Tampere, 2010, Pennala, E.: Lujuusopin perusteet, Moniste 407, Otatiето 2002; Karhunen, J. & al.: Lujuusoppi, Otatiето 2004; Beer, F., Johnston, E., Mechanics of materials, McGraw-Hill, 2011; Gere, J.M., Timoshenko, S.P., Mechanics of Materials, Chapman&Hall, 1991.

Assessment methods and criteria:

In the course acceptable homework and midterm exams / final exam are required. This course utilizes continuous assessment. There are four midterm exams, of which the last one is at the same time a final exam. Homework contain every week three problems that are marked. The student is allowed to participate to a final exam, when the homework is accepted.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University teacher Hannu Lahtinen

Other information:

The course looks into the most important principal concepts of strength of materials and gives ability for dimensioning of simple structures such as straight bars in tension, compression or torsion loads and straight beams under bending moments.

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Field of Industrial Engineering and Management

Arvostelu: 1 - 5, pass, fail

Opettajat: Henri Jounila

Opintokohteen kielet: Finnish

555263A Technology, Society and Work 2.0 op

555260P Basic Course in Occupational Safety and Wellbeing at Work 3.0 op

ECTS Credits:

5 ECTS credits.

Language of instruction:

Finnish. English material is also used.

Timing:

Periods 3-4.

Learning outcomes:

Upon completion of the course, the student will be able to:

- explain the basic terms of occupational safety and health
- assess the importance of occupational safety, health and well-being at work
- assess the significance of occupational safety in the improving of productivity and quality
- apply different safety analysis
- explain core issues of occupational safety and health management

Contents:

Occupational safety and health, safety management, safety culture, laws and standards, hazards and risks, occupational diseases and work accidents, safety analysis, occupational safety at shared industrial work sites, occupational safety card, HSEQ-assessment procedure, other current issues.

Mode of delivery:

The tuition will be implemented as face-to-face teaching.

Learning activities and teaching methods:

Lectures and assignments 26 h / group work 40 h / tasks and self-study 68 h.

Target group:

Industrial Engineering and Management, Mechanical Engineering, Process Engineering and Environmental Engineering students.

Prerequisites and co-requisites:

-

Recommended optional programme components:

-

Recommended or required reading:

Mertanen V. 2015. Työturvallisuuden perusteet. Helsinki: Työterveyslaitos. Lecture materials. Other materials will be defined during the course.

Assessment methods and criteria:

Group work 0-5, the assessment of the tasks will be informed at the beginning of the course.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

MSc Henri Jounila

Working life cooperation:

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

555288A	Project Management	5.0 op
ay555285A	Project management (OPEN UNI)	5.0 op
555282A	Project Management	4.0 op
555280P	Basic Course of Project Management	2.0 op

ECTS Credits:

5 ECTS credits.

Language of instruction:

Finnish. Check the course in English 555288A Project Management.

Timing:

Period 2.

Learning outcomes:

Upon completion of the course, the student will be able to:

- describe explain the essential concepts and methods related to project management
- apply project management methods to create a schedule for a project and calculate critical path
- understand essential concepts related to project cost management and able to apply earned value method and three point estimate to manage project costs
- recognises the essential tasks of project risk management

Contents:

Defining project management, project goals and objectives, project phases and project life-cycle management, project planning, organising and scope management, schedule management, cost management, earned value calculation and project risk management, project stakeholder management, project communications management, the role of project manager, new modes of project delivery

Mode of delivery:

The tuition will be implemented as web-based teaching.

Learning activities and teaching methods:

Web-based lectures 16h, self-study 118h

Target group:

Industrial Engineering and Management students and other students taking Industrial Engineering and Management as minor.

Prerequisites and co-requisites:

No prerequisites exist.

Recommended optional programme components:

This course is part of the 25 ECTS module of Industrial engineering and management that also includes 555225P Basics of industrial engineering and management, 555242A Product development, 555264P Managing well-being and quality of working life, and 555286A Process and quality management.

Recommended or required reading:

Lecture material, exercise book, Arto, Martinsuo & Kujala 2006. Projekttiliiketoiminta. WSOY

Assessment methods and criteria:

Weekly assignments and final online exam

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Assistant professor Kirsi Aaltonen

Working life cooperation:

Videos from the industry's projects

Other information:

Substitutes courses 555280P Basic Course of Project Management + 555282A Project Management.

Vastuuyksikkö: Faculty of Technology

Arvostelu: 1 - 5, pass, fail

Opettajat: Ursula Heinikoski

Opintokohteen kielet: Finnish

Leikkaavuudet:

030004P Introduction to Information Retrieval 0.0 op

ECTS Credits:

1 ECTS credit / 27 hours of work

Language of instruction:

Finnish

Timing:

Architecture 3. spring semester, period III;
 biochemistry 3. autumn semester;
 biology 3. autumn semester, period I;
 chemistry 3. autumn semester, period I;
 civil engineering 2. spring semester, period IV;
 computer science and engineering 2. spring semester, period IV;
 electronics and communications engineering 3. spring semester;
 geosciences 2. spring semester, period IV;
 geography 3. semester, periods I and III;
 industrial engineering and management 3. year;
 information processing sciences 1. or 3. year;
 mathematics and physics 1. spring semester, period III;
 mechanical engineering 3. year;
 mining engineering and mineral processing 3. year;
 process and environmental engineering 2. year, period II;
 Master's degree students in industrial engineering and management 1st year.

Learning outcomes:

Upon completion of the course, the students:

- can search scientific information,
- can use the most important databases of their discipline,
- know how to evaluate search results and information sources,
- can use the reference management tool.

Contents:

Scientific information retrieval process, the most important databases and publication channels of the discipline, evaluation of the reliability of information sources and reference management tool.

Mode of delivery:

Blended teaching: classroom training, web-based learning material and exercises, a group assignment.

Learning activities and teaching methods:

Training sessions 8 h, group working 7 h, self-study 12 h

Target group:

Compulsory for all bachelor degree students of Faculty of information technology and electrical engineering, Faculty of Technology and Faculty of science. Compulsory also for those Master's degree students in Industrial Engineering and Management who have no earlier studies in the information skills. Optional for the students of biochemistry.

Recommended optional programme components:

In biochemistry the course is completed as a part of 740376A Bachelor's Thesis.

Recommended or required reading:

Web learning material [Tieteellisen tiedonhankinnan opas](#)

Assessment methods and criteria:

Passing the course requires participation in the training sessions and successful completion of the course assignments.

Grading:

pass/fail

Person responsible:

*Choose language studies***902150Y: Professional English for Technology, 2 op****Voimassaolo:** 01.08.2014 -**Opiskelumuoto:** Language and Communication Studies**Laji:** Course**Vastuuyksikkö:** Languages and Communication**Arvostelu:** 1 - 5, pass, fail**Opintokohteen kielet:** English**Leikkaavuudet:**

902011P-05 TE3/ Professional English for Technology 2.0 op

Proficiency level:[CEFR B2 - C1](#)**Status:**

This course is the first English course for students in the engineering programmes in the Faculty of Technology (TTK) and Faculty of Information Technology and Electrical Engineering (TST).

Required proficiency level:

English must have been the A1 or A2 language at school or equivalent English skills acquired otherwise. If you need to take English, but lack this background, please get in touch with the [Languages and Communication contact teacher](#) for your department to discuss individual solutions.

ECTS Credits:

2 credits. The workload is 53 hours.

Language of instruction:

English

Timing:

The course takes place in the autumn semester (periods 1 and 2).

Learning outcomes:

By the end of the course, you can

- create and deliver effective presentations of a product, a company and company processes,
- apply appropriate cultural, linguistic and technical knowledge when presenting a product or company,
- evaluate your own strengths and weaknesses in English-language communication, with a view to developing appropriate skills in future.

Contents:

Scheduled as the first course of your English studies, Professional English for Technology (PET) has a strong focus on developing speaking skills necessary for working life. During PET, you will explore a product or service from your own field, and give a variety of short presentations in connection with your product or service. In addition, PET helps you to develop an awareness of your own language skills, encouraging you to develop strategies and techniques for effective learning.

Mode of delivery:

Contact teaching and independent study

Learning activities and teaching methods:

Lessons 24 hours / independent work 29 hours. Lessons include regular pair and group work in class. Independent homework activities include team work for the preparation of four short presentations, vocabulary study and other small assignments. Active participation is essential.

Target group:

Students in the engineering programmes: TTK (PO1, YMP1, KO1, TuTa1, RaKy), TST (ST2, CSE2).

Prerequisites and co-requisites:

-

Recommended optional programme components:

This course is offered as the first course of your English studies.

Recommended or required reading:

Course materials will be provided by the teacher in electronic form.

Assessment methods and criteria:

The course utilises continuous assessment that is based on the learning outcomes of the course, including full and active participation in class, and the successful completion of module assignments and class presentations.

Opintokohteen kielet: English

Proficiency level:

[CEFR B2 - C1](#) (All Levels)

Status:

This course can be chosen in partial completion of the English language requirement for students in the engineering programmes in the Faculty of Technology (TTK) and Faculty of Information Technology and Electrical Engineering (TST).

Required proficiency level:

English must have been the A1 or A2 language at school or equivalent English skills acquired otherwise. If you need to take English, but lack this background, please get in touch with the [Languages and Communication contact teacher](#) for your department to discuss individual solutions.

ECTS Credits:

2 credits. The workload is 53 hours

Language of instruction:

English

Timing:

The course takes place in both autumn (periods 1 and 2) and spring (periods 3 and 4) semesters. Check the study guide for availability in your department.

Learning outcomes:

By the end of the course, you are expected to have demonstrated:

- the ability to write clear and effective business letters conveying information and details accurately,
- the ability to use an appropriate level of formality and style for business communications,

- mastery of the conventional formats and layouts of different types of business letters.

Contents:

The aim of this course is to introduce different types of business correspondence and the format used when communicating in writing. Types of correspondence include communication in business-to-business scenarios and between a business and the public.

Mode of delivery:

Self-access: the course operates within an online workspace, with online support from the teacher.

Learning activities and teaching methods:

Introductory session 2 hours / independent learning 51 hrs / optional text clinics. Assignments, instructions and course resources are available in the online course workspace. Completed assignments are submitted electronically to the teacher. The teacher provides feedback and any problems are discussed either by written electronic communication or at one of the optional text clinics.

Target group:

Students in the engineering programmes (TTK and TST)

Prerequisites and co-requisites:

-

Recommended optional programme components:

This is an elective course which can be taken after [902150Y PET](#) by students in the engineering programmes (TTK and TST).

Recommended or required reading:

Course materials are provided in an electronic form that can be downloaded.

Assessment methods and criteria:

All assignments must be completed to a standard of effective business correspondence based on the learning outcomes of the course. In addition, there is a test at the end of the course.

Timing:

The course takes place in both autumn (periods 1 and 2) and spring (periods 3 and 4) semesters. Check the study guide for availability in your department.

Learning outcomes:

By the end of the course, you are expected to

1. have demonstrated a good basic vocabulary related to job applications, meetings and negotiations,
2. have demonstrated an ability to create an effective CV and cover letter for a job application,
3. be able to communicate effectively and with a reasonable degree of fluency at job interviews and in meeting and negotiation contexts.

Contents:

The aim of this course is to help you to develop the English language skills needed to deal with situations related to everyday working life. The course focuses on four basic areas:

- i) business communication
- ii) social and cultural aspects of English in working life situations,
- iii) applying for a job,
- iv) a general introduction to the language of meetings and negotiations.

Mode of delivery:

Contact teaching and independent study

Learning activities and teaching methods:

Lessons 26 hours / independent work 27 hours. Active participation is essential. The course includes regular pair and group work in class and independent homework activities.

Required proficiency level:

English must have been the A1 or A2 language at school or equivalent English skills acquired otherwise. If you need to take English, but lack this background, please get in touch with the [Languages and Communication contact teacher](#) for your department to discuss individual solutions.

ECTS Credits:

2 ECTS credits. The workload is 53 hours.

Language of instruction:

English

Timing:

The course takes place in both autumn (periods 1 and 2) and spring (periods 3 and 4) semesters. Check the study guide for availability in your department.

Learning outcomes:

By the end of the course, you are expected to

- 1) explain and apply general academic / scientific vocabulary from Coxhead's Academic Word List (AWL)
- 2) differentiate between informal (non-academic) and formal / academic language,
- 3) demonstrate use of academic vocabulary in a variety of writing and communication contexts.

Contents:

The general aim of this course is to activate and broaden your basic scientific vocabulary, i.e. the core vocabulary of scientific texts, which is principally the same regardless of the field (AWL). During this process, you will become aware of the strategies which best promote your skills to learn and memorise vocabulary. The ultimate aim is to help you gain the skills to read and write academic / scientific text and to discuss related topics. To help you achieve the learning outcomes, you will work on various written and oral activities which focus primarily on practicing vocabulary learning strategies, word formation, and the use of the most frequent academic vocabulary (AWL sublists).

Mode of delivery:

Contact teaching and independent study

Learning activities and teaching methods:

Lessons 26 hours / independent work 27 hours. The independent work includes a written academic essay or report; vocabulary tests; presentations, which will be given in class to small groups of students; and other homework assignments. Active participation is essential.

Target group:

Students in the engineering programmes (TTK and TST)

Prerequisites and co-requisites:

-

Recommended optional programme components:

This is an elective course which can be taken after [902150Y PET](#) by students in the engineering programmes (TTK and TST).

Recommended or required reading:

Course materials will be provided by the teacher in electronic form.

Assessment methods and criteria:

Regular and active participation in the weekly sessions will be observed in continuous assessment that is based on the learning outcomes of the course. Satisfactory completion of the in-class/ homework assignments and the vocabulary tests is required.

See more about assessment criteria, <https://www oulu.fi/forstudents/assessment-criteria>.

Grading:

Pass/Fail

Person responsible:

Susan McAnsh. See contact teachers, <https://www oulu.fi/kielikoulutus/node/56574>.

485980A: Bachelor's Thesis, 8 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

ECTS Credits:

8 ects

Language of instruction:

Finnish, can be written in English if needed.

Timing:

The end of Bachelor's studies

Learning outcomes:

Upon completion of the thesis the student can create a research plan, and define a research problem and research questions. She/He is able to manage her/his own work according to the project plan. The student can also utilize different information sources and critically evaluate the information obtained. The student is able to produce clear and finalized text, in line with technical and scientific writing practices.

Contents:

The student chooses the theme for the thesis in cooperation with his/her supervisor.

Mode of delivery:

The thesis is written towards the end of the BSc studies, typically during the third year.

Learning activities and teaching methods:

Independent work.

Target group:

Bachelor Students of Civil Engineering.

Prerequisites and co-requisites:

Basic and intermediate studies.

Recommended optional programme components:

Information Skills and Technical communication

Assessment methods and criteria:

BSc thesis and related maturity test.

Grading:

pass/fail

Person responsible:

The supervisor of Thesis

Working life cooperation:

Thesis' theme is often selected from the real research project or it is possible to do with industrial company.

Voimassaolo: 01.08.2005 - 31.07.2021

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Languages and Communication

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay900060A Technical Communication (OPEN UNI) 2.0 op

470218P Written and Oral Communication 3.0 op

Proficiency level:

This course is not offered in English. It is only Finnish-speaking students.

Status:

This course unit is compulsory for students of Electrical Engineering, Computer Science, Communications Technologies and Engineering Mechanical Engineering, Process and Environmental Engineering.

Required proficiency level:

-

ECTS Credits:

2 credits

Language of instruction:

Finnish

Timing:

1st year: Process and Environmental Engineering

2nd year: Communications Technologies

3rd year: Geoscience; Mechanical Engineering; Electrical Engineering, Computer Science and Engineering Technologies

Mode of delivery:

Multimodal teaching

Learning activities and teaching methods:

Contact hours ca. 20 h and independent group work or self-study ca. 34 h.

Target group:

Bachelors students of Electrical Engineering, Computer Science, Communications Technologies and Engineering Mechanical Engineering, Process and Environmental Engineering.

Prerequisites and co-requisites:

-

Recommended optional programme components:

-

Recommended or required reading:

Kauppinen, Anneli & Nummi, Jyrki & Savola, Tea: Tekniikan viestintä: kirjoittamisen ja puhumisen käsikirja (EDITA); Nykänen, Olli: Toimivaa tekstiä: Opas tekniikasta kirjoittaville (TEK) and material in Moodle study environment.

Assessment methods and criteria:

Active participation in contact teaching, independent study and completion of given assignments.

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

Pass / fail

Person responsible:

Kaija Oikarainen

Working life cooperation:

-

Other information:

All students are required to attend the first meeting of the course unit so the work groups can be formed and work started in a timely and efficient manner. When signing up for the course unit, you should keep in mind that completing it requires a responsible attitude and a strong commitment to the work because the teamwork-based exercises rely heavily on the participation and activity of the students.

If the student is involved in the University's student associations or functions in a position of trust in university government, student union administration or Oulun Teekkariyhdistys ry (or in its subordinate guilds), he/she may be relieved of some of the group communication exercises. These compensatory actions must always be agreed upon separately with the course unit's teacher. The student must present an official statement from a person in charge of the governing body or association, which details the student's tasks and involvement with that body or association. Participation that took place over five years ago does not entitle the student to any compensation.

485981A: The Maturity Test for Bachelor's Degree, 0 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

ECTS Credits:

0 ects

Language of instruction:

Finnish or Swedish.

Timing:

After completion of the bachelor's thesis.

Learning outcomes:

The student can produce mature text in popular form of the research field and thus show ones familiarity to the field.

Contents:

Depends on the topic of the thesis.

Mode of delivery:

Literary work

Learning activities and teaching methods:

Exam

Target group:

Bachelor Students of Civil Engineering

Recommended optional programme components:

Will be written after the Bachelor's Thesis has been submitted for review.

Assessment methods and criteria:

Student writes an essay in his/her native language about the topic of the Bachelor's thesis to show a good command of the language and the content of the thesis

Grading:

Pass or fail. Both the contents and language are assessed.

Person responsible:

Supervisor of Thesis

A485122: Civil Engineering, Module preparing for the Option / Structural Engineering, 40 op

Voimassaolo: 01.08.2018 -

Opiskelumuoto: Intermediate Studies

Laji: Study module

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

Structural Engineering

461104A: Strength of materials II, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Laukkanen, Jari Jussi

Opintokohteen kielet: Finnish

Leikkaavuudet:

461011A-01 Strength of Materials II, examination 0.0 op

461011A-02 Strength of Materials II, exercises 0.0 op

461011A Strength of Materials II 7.0 op

ECTS Credits:

5 ECTS

Language of instruction:

Finnish

Timing:

Periods 1-2.

Learning outcomes:

The student can apply fatigue design principles in structural analysis and use fracture mechanics to evaluate the life of simple structures. He / she is also able to solve stability, buckling and buckling bending of rod and beam structures. The student is able to solve curve beam bending state and free and prevented torque situations.

After completing the course, the student will have a general understanding of the different areas of strength and will be able to discuss the potential of strength design with experts in the field.

Contents:

Dimensioning of structures for fatigue. Elements of fracture mechanics. Stability, buckling and buckling of rod and beam structures. Curve bar bending. Free and prevented torsion.

Mode of delivery:

Contact teaching

Learning activities and teaching methods:

Lectures 45 h, exercises 45 h and independent learning 45 h. Homework.

Target group:

Compulsory for Mechanical Engineering Degree students.

Prerequisites and co-requisites:

Statics and Strength of Materials I.

Recommended or required reading:

Pennala, E.: Lujusopin perusteet, Moniste 407, Otatiето, 1998; Outinen, H., Koski, J., Salmi, T.: Lujusopin perusteet, Pressus Oy, Tampere, 2000 ;Salmi, T., Virtanen, S.: Materiaalien mekaniikka, Pressus Oy, Tampere, 2008; Ylinen, A.: Kimmo- ja lujusoppi I ja II. WSOY, 1976;. Bära brista, grundkurs i hållfasthetslära, AWE/Gebers, Stockholm 1979.

Assessment methods and criteria:

The course can be completed with an intermediate exam or a final exam. You can take the exam only after you have successfully completed your homework.

Grading:

The course uses 1-5 numerical grading scale. On a numerical scale, zero indicates a failed performance.

Person responsible:

University Teacher Jari Laukkanen.

461106A: Dynamics, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Koivurova Hannu

Opintokohteen kielet: Finnish

Leikkaavuudet:

461018A-01 Dynamics, examination 0.0 op

461018A-02 Dynamics, exercises 0.0 op

461018A Dynamics 4.0 op

ECTS Credits:

5 ECTS credits / 120 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 2st spring semester.

Learning outcomes:

The aim of this course is to provide students with the ability to examine the relationship between the forces on a solid body and the resulting motion, position, speed and acceleration of the body. Learning outcomes: Upon completing the required coursework, the student knows and is able to explain the fundamental quantities and the base laws of the classical mechanics. He/she is able to choose an appropriate coordinate system and analyze the motion - position, velocity, and acceleration - of the parts of a device. The student is able to draw a free body diagram of a moving system, and compose and derive the equations of motion for a system using the direct momentum method, the work-energy method, and the impulse-momentum method.

Contents:

Introduction; Kinematics of a particle; Plane kinematics of a rigid body; Kinetics of a particle;. Basics of mechanical vibrations; Kinetics of a system of particles; Plane kinetics of a rigid body.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 45 h / Exercise 30 h / Self-study 45 h.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Salmi T., Virtanen S. (2006) Dynamiikka, Pressus; Salmi, T. (2003) Dynamiikka 1, kinematiikka, Pressus; Salmi, T. (2002) Dynamiikka 2, kinetiikka, 2. p., Pressus. Oheiskirjallisuus: Salonen, E.M. (2000) Dynamiikka I, 8. korj. p., Otatieto; Salonen, E.M. (1999) Dynamiikka II, 8. korj. p., Otatieto; Beer, F., Johnston, E.(2007) Vector Mechanics for Dynamics, 9.ed., McGraw-Hill

Assessment methods and criteria:

This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Moodle Study Portal.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

University Lecturer Hannu Koivurova

461108A: Mechanics of materials, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Koivurova Hannu

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS credits / 90 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the Autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:

Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to apply the theory of the strength of materials to different kind of design problems needed in engineering mechanics. He/she understand the fundamental concepts of mechanics of deformable solids; including static equilibrium, geometry of deformation, and material constitutive behavior. He/she can discuss the basic mechanical principles underlying modern approaches for modelling of various types of materials under a different type of loadings. This provide students with exposure to the systematic methods for solving engineering problems in solid mechanics. He/she can also build the necessary theoretical background for further structural analysis and design courses.

Contents:

The general equations of mechanics. The stress and strain state. Different material models; Linear elastic material, isotropic, transverse-isotropic and orthotropic material models. The concept of strain energy. Theory of plasticity. Yield criterion, plastic flow rule and hardening. Limit state design. Introduction to visco elastic material and creep teory.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 30 h / Exercise 30 h / Self-study 30 h.

Target group:

Students of the Bachelor Stage of the Mechanical Engineering Degree Programme

Prerequisites and co-requisites:

Recommended: Strength of Materials I and II and the knowledge of vector and matrix calculations.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Salmi, T., Virtanen, S. (2008) Materiaalien Mekaniikka. Pressus Oy.

Assessment methods and criteria:

This course utilizes continuous assessment. During the course, there are 2 intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Moodle Study Portal.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

461107A: Finite Element Methods I, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Lumijärvi, Jouko Veikko Juhani

Opintokohteen kielet: Finnish

Leikkaavuudet:

461033A	Finite Element Methods I	3.5 op
461033A-01	Finite Element Methods I, examination	0.0 op
461033A-02	Finite Element Methods I, exercises	0.0 op

ECTS Credits:

5 ECTS credits / 132 hours of work

Language of instruction:

Finnish

Timing:

Lectures and exercises, periods 1.-2.

Learning outcomes:

The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:

The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:

Face-to-face teaching.

Learning activities and teaching methods:

Lectures and exercises take place during periods 1.-2.

Target group:

Students of the bachelor's stage of the Mechanical Engineering Degree Programme.

Prerequisites and co-requisites:

Strength of Materials I and II and Fundamentals of mechanical computing and programming

Recommended or required reading:

Lecture notes (in Finnish), N. Ottosen & H. Petersson: Introduction to the Finite Element Method, NAFEMS: A Finite Element Primer, O. C. Zienkiewicz & R. L. Taylor: The Finite Element Method, 4th ed, Vol. 1: Basic Formulation and Linear Problems.

Assessment methods and criteria:

The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

Grading:

Numerical grading scale 1-5.

Person responsible:

Jouko Lumijärvi

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

ECTS Credits:

5 ETCS / 135 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the spring semester, during periods 3 and 4.

Learning outcomes:

Ability to design and dimension conventional load-bearing structures made of wood according to the requirements of the EN standard.

Contents:

Mechanical properties of wooden materials. Design of columns and beams. Stability. Phenomena in joints and connections. Design of connections.

Mode of delivery:

Face-to-face and independent study.

Learning activities and teaching methods:

Lectures and exercises 48 h, project work 24 h and independent work 63 h.

Target group:

Bachelor level students in the degree program of civil engineering.

Prerequisites and co-requisites:

Basic knowledge of statics, solid mechanics, timber construction and product technology as well as structural engineering.

Recommended optional programme components:

The course supports advanced courses in civil and structural engineering and timber structures.

Recommended or required reading:

RIL 201; RIL 205 + Puurakenteiden lyhennetty suunnitteluohje; EN 1995-1-1, EN 1995-1-2, EN 1995-2. Material from Puuinfo.

Assessment methods and criteria:

The course is passed by partial exams during the course or by a final exam. A project work is also required.

Grading:

Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:

Senior research fellow Antti H. Niemi

485108A: Desing of Steel Structures and Steel Construction, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466105S Design of Steel Structures 6.0 op

ECTS Credits:

5 ects

Language of instruction:

Finnish

Timing:

Periods 1 and 2

Learning outcomes:

After completing the course the student is capable of explaining the crystalline structure of steel material and he understands elasto-plastic material model. He is able to explain the effect of inclusions, heat treatment and welding process to the mechanical properties of a steel material. The student is familiar with fire design of steel structures. He is able to explain common types of corrosion. The student is able to design the most typical joints in a steel frame and he can analyze simple steel structures. He is also able to analyze stability problems and explain the effects of imperfections and second order effects on frame behavior and member forces.

Contents:

The following topics are covered during the course: Ferrous metals and their properties. Principles of Eurocodes. Design of simple steel structure under base loading cases and loading combinations. Corrosion. Design of joints in steel structures. Composite structures with steel member. Section classification. Effective cross-section. Cross-sections with stiffeners. Steel members in bending and axial compression. Buckling, lateral torsional buckling, and torsion.

Mode of delivery:

Face-to-face

Learning activities and teaching methods:

Lectures, exercises and self-study.

Target group:

Major students in Structural Engineering and Construction Technology, Machine design, and Engineering Mechanics.

Prerequisites and co-requisites:

466102A Introduction to Structural Design. Key notes in courses Statics, Strength of Materials I, Strength of Materials II, Energy principles and Their Use in Beam Structures, and Plates and Shells and Mechanics of materials

Recommended or required reading:

Lecture notes (in Finnish). Eurocodes 1990-1999.

Assessment methods and criteria:

Three midterm exams or one final exam is required. One design exercise is required.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Matti Kangaspuoskari

Other information:

This course will replace course 466105S Design of Steel Structures in Academic year 2020-21.

485104A: Structural renovation of buildings, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

Leikkaavuudet:

466117S Structural renovation of buildings 5.0 op

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

Autumn, Period 2

Learning outcomes:

After completing the course students can describe different structural materials and structural systems used in residential buildings in 1900-2000. They are able to identify and explain the typical risk structures and defects in those buildings. They can also explain the old design codes and recommendation used in Finland.

Contents:

Finnish house construction and typical details during 1900-2000. Standards, design recommendations and design methods used in Finland.

Mode of delivery:

Lecture room teaching

Learning activities and teaching methods:

Lectures and exercises

Target group:

Students studying structural engineering

Prerequisites and co-requisites:

Fundamentals of building construction and building physics

Recommended optional programme components:

-

Recommended or required reading:

Lecture material

Assessment methods and criteria:

Passed practical works and exam

Grading:

The course utilizes a numerical grading scale 1-5. Numerical scale zero stands for a fail.

Person responsible:

Senior research fellow Antti H. Niemi

Working life cooperation:

-

Other information:

This course will replace the course 466117S in academic year 2020-21.

Leikkaavuudet:

477301A Momentum Transfer 3.0 op

ECTS Credits:

5 ECTS / 133 hours of work.

Language of instruction:

Finnish, can be completed in English as a book examination.

Timing:

Implementation in spring semester during 3rd period. It is recommended to complete the course at the second (Bachelor's) spring semester.

Learning outcomes:

After the course the student is able to determine the viscosity of pure substances and mixtures and to estimate the effect of temperature and pressure on viscosity. The student is able to recognise the interactions between a solid body and flowing fluid and to distinguish the forces, their directions and to calculate their magnitudes. The student is able to formulate momentum balance equations and to solve these in order to calculate velocity distribution, flow rate and pressure drop. The student is able to distinguish laminar and turbulent flow regimes from others and is able to use the correct equations according to flow regime. After the course the student is able to design pipelines and other simple flow mechanical process equipment.

Contents:

Viscosity. Mechanism of momentum transfer. Creating and solving differential momentum balances. Friction factor. Flow in pipes and open-channels.

Mode of delivery:

Face-to-face teaching in Finnish. Book examination in English.

Learning activities and teaching methods:

Lectures 45 h, homework 15 h and self-study 73 h. For foreign students written examination based on given literature.

Target group:

Bachelor's degree students of process and environmental engineering.

Prerequisites and co-requisites:

Knowledge of solving differential equations.

Recommended optional programme components:

The course is part of a stream that aims at skills needed in the phenomenon-based modelling and planning of industrial processes.

Recommended or required reading:

Munson, B.R., Okiishi, T.H., Huebsch W.W. & Rothmayer A.P. Fluid Mechanics, 7. painos, Wiley 2013. ISBN 978-1-118-318676

or

Gerhart, Gerhart, Hochstein 2017. Munson's Fluid Mechanics. ISBN 978-1-119-24898-9.

Assessment methods and criteria:

This course utilizes continuous assessment. During the course there are 3 intermediate exams in Finnish.

The course can also be completed by final examination

Read more about the course assessment and grading systems of the University of Oulu at www.oulu.fi/english/studying/assessment.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Finnish, but also option to complete the course in English.

Timing:

The course is held in the autumn semester during the period 1. It is recommended to complete the course at the 1st autumn semester of the international master program of environmental engineering.

Learning outcomes:

After the course, the student understands and can describe the main hydrological processes, water movements and hydraulics phenomenon quantitatively through mathematical methods. The student also understands and quantifies the relation between state and flow with relation to snowmelt, evaporation, infiltration and groundwater flow.

Contents:

Hydrological cycle, physical properties of water, distribution of water resources, water balance, precipitation, evapotranspiration, soil and ground water, infiltration, runoff, snow hydrology, hydrometry, water quality of rivers and lakes.

Mode of delivery:

Face-to-face teaching and independent work with two assignment reports.

Learning activities and teaching methods:

Lectures 24 h, exercises 16 h and independent work 93 h. Totally 133 h.

Target group:

Students in international master programs of environmental engineering

Prerequisites and co-requisites:

The recommended prerequisite is the completion of the following course or having corresponding knowledge prior to enrolling for the course unit: 477201A Material and Energy Balances and 477052A Fluid mechanics.

Recommended optional programme components:

The course is a prerequisite for most of master level studies.

Recommended or required reading:

Physical Hydrology (Dingman SL, 2002, 2nd Edition, ISBN 978-1-57766-561-8), Fluid Mechanics and Hydraulics (Giles, Evett and Liu, 3rd Edition, ISBN 0-07-020509-4)

Assessment methods and criteria:

The assignments must be returned and passed with threshold of 50% in order to get final examination. The final grade of the course is weighted average of assignment reports (80%) and examination (20%).

Grading:

The assignments must be returned and passed with threshold of 50% in order to get final examination. The final grade of the course is weighted average of assignment reports (80%) and examination (20%).

Person responsible:

University Lecturer Anna-Kaisa Ronkanen

Working life cooperation:

Examples solved in the lectures based on real problems

Other information:

The English version of the course is organized parallel to Finnish version of the course.

488144A: Water distribution and sewage networks, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Pekka Rossi

Opintokohteen kielet: English

Leikkaavuudet:

488135S Water distribution and sewage networks 5.0 op

ECTS Credits:

5 ECTS credits / 133 hours of work

Language of instruction:

English

Timing:

The course unit is held in the autumn semester, in period 2.

Learning outcomes:

Student knows and understands the systems and dynamics needed for water distribution and waste water networks. Student is able to do basic dimensioning for water distribution network and sewer system of an urban area.

Contents:

Water distribution and waste water network design and dimensioning, Pumping and storage tanks needed in distribution of water and collection of sewage waters, renovation of pipelines, special circumstances in water distribution, effects of cold climate and harmful hydraulic conditions.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (30 h), homework (45 h) and a design exercise (58 h).

Target group:

Students in master program of environmental engineering and in master program of civil engineering.

Prerequisites and co-requisites:

477052A Virtaustekniikka, Use of AutoCAD-program (488051A AutoCAD ja Matlab prosessi- ja ympäristötekniikan työkaluna or similar).

Recommended optional programme components:

The recommended prerequisite is the completion of the following course prior to enrolling for the course unit: 477052A Virtaustekniikka, 477312A Lämmön- ja aineensiirto 488102A Hydrological Processes and 488051A AutoCAD ja Matlab prosessi- ja ympäristötekniikan työkaluna or at least equivalent information about water management.

Recommended or required reading:

Lecture handout and other materials delivered in lectures. To the appropriate extent: RIL 237-1-2010 Vesihuoltoverkkojen suunnittelu, RIL 237-2-2010 Vesihuoltoverkkojen suunnittelu, RIL 124-2 Vesihuolto II, Mays Water distribution systems handbook

Assessment methods and criteria:

Exam and a design exercise.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Postdoctoral Researcher Pekka Rossi

Working life cooperation:

Visit to a site of water distribution network building site, pumping station or water supply/sewerage company.

Other information:

Replaces the course 488135S Water distribution and sewage networks, 5 ect.

492300A: Rock mechanics, 5 op**Voimassaolo:** 01.08.2016 -**Opiskelumuoto:** Intermediate Studies**Laji:** Course**Vastuuyksikkö:** Oulu Mining School**Arvostelu:** 1 - 5, pass, fail**Opettajat:** Zongxian Zhang**Opintokohteen kielet:** Finnish**ECTS Credits:**

5 ECTS cr /133 hours of work

Language of instruction:

English

Timing:

Spring, period 3

Learning outcomes:

Upon completion of the course students should: (1) know the basic properties of rock; (2) be able to make stress or strain analysis to a rock sample and a rock structure; (3) be able to analyse rock failure under compression, shear and tension loads; (4) know which factors influence rock failure or fracture and know how those affect rock fracture; (5) know the basic principles and methods in rock support; (6) be able to do rock support design; (7) be able to apply rock mechanics theory to tunnelling, mining planning, rock drilling, rock excavation, slope engineering, and other rock-related engineering.

Contents:

The course will: (1) introduce basic properties and characteristics of rock and rock mass; (2) introduce stress analysis method; (3) present basic theory on rock failure or fracture; (4) introduce basic methods for measuring rock strengths (compressive, shear and tensile) in laboratory; (5) present methods for measuring in-situ stresses; (6) introduce methods for rock support; (7) give knowledge on how to apply rock mechanics to mining engineering and other types of rock engineering.

Mode of delivery:

Face to face teaching

Learning activities and teaching methods:

Lectures, seminars, written reports, and assignments (mine visit if available).

Target group:

Students from mining and mineral processing, geophysics and geology

Recommended or required reading:

Brady BHG and Brown ET. Rock Mechanics for underground mining, third edition. New York: Kluwer Academic Publishers, 2004.

Goodman RE. Introduction to rock mechanics, second edition. New York: John Wiley & Sons, 1989.

Zhang ZX. Rock fracture and blasting: theory and applications. Oxford: Elsevier, 2016 (Chapters 1, 3-7, 10, 17-19, 21-24).

Assessment methods and criteria:

Assessment methods include oral presentations, written reports, seminars, assignments and written examination. The total points gained from the above determine the final grade of the course, and it is given on the scale Fail-1-5.

- For grade 1, the student must be able to know and understand the basic knowledge in this course.
- For grade 2, the student must know how to make stress analysis and rock failure analysis.
- For grade 3 the student must be able to make a plan for rock support.
- For grade 4, the student must be able to make a plan for rock support and evaluate such a plan.
- For grade 5, the student must be able to apply the acquired knowledge to make a very good plan for mining and rock engineering operation by using rock mechanics. He or she must do an outstanding design in at least one aspect, e.g. he/she can find a problem related rock mechanics or rock fracture and know how to solve the problem or how to make improvement.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Zongxian Zhang

485401A: Basics of Traffic Engineering, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Arvostelu: 1 - 5, pass, fail

Opettajat: Virve Merisalo

Opintokohteen kielet: Finnish

Leikkaavuudet:

488151A Basics of Traffic Engineering 5.0 op

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

Period 1

Learning outcomes:

By completing the course the student knows the basics of modes of transport, the significance of traffic and transportation to society, traffic planning and research methods, transport economics and the external effects of transport.

Contents:

Modes of transport, Need for traffic and transportation, Transport planning and research, Economical and environmental impacts of traffic, Traffic safety.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 22 h, self-study 85 h

Target group:

Students in the Bachelor's Programme of Civil Engineering

Prerequisites and co-requisites:

-

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Examination and exercises

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Arvostelu: 1 - 5, pass, fail

Opettajat: Veikko Pekkala

Opintokohteen kielet: Finnish

Leikkaavuudet:

488153A Basics of Road Engineering 5.0 op

ECTS Credits:

5 ECTS / 135 h of work

Language of instruction:

Finnish

Timing:

Period 3

Learning outcomes:

By completing the course student understands the basics of road design and construction, is able to calculate structure layers of road and is familiar with the maintenance of roads

Contents:

Road and street planning and design, lining, roads structure, maintenance of roads, basics of earthworks

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 28 h, exercises 22 h, self-study 85 h

Target group:

Students in bachelor's programmes of environmental engineering

Prerequisites and co-requisites:

-

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Materials delivered during the lectures

Assessment methods and criteria:

Exam, assignment and seminar work

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

488505A: Waste management and recycling, 5 op

Voimassaolo: 01.09.2018 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Process and Environmental Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Eva Pongracz, Jenni Ylä-Mella

Opintokohteen kielet: Finnish

Leikkaavuudet:

488130A Waste management and resources recovery 5.0 op

ECTS Credits:

5 cr/133 hours of work

Language of instruction:

English

Timing:

Spring, period 3-4.

Learning outcomes:

After completing the course, the student will be familiar with the waste legislation and other policy instruments and is able to use the waste-related terminology. The student understands the responsibilities of the different actors and stakeholders in the municipal waste management system and knows the key waste minimization and recycling requirements. The student will also be familiar with the municipal waste collection system for households and able to calculate the recycling and recovery rates of recyclables. The student knows the key recycling technologies for the main waste fractions and can calculate treatment costs for the major streams.

Contents:

Waste legislation in the EU and Finland. Waste Act and Regulations, waste hierarchy. Sorting of household waste: waste containers, collection points, transport and reception, responsibilities. Waste recycling and energy recovery technologies, recycling rates, producer responsibility schemes, utilization of bio-waste and energy recovery technologies. Waste Center operations, safe disposal of waste. Consumer habits, consumers responsibilities and future challenges in waste management.

Mode of delivery:

Distance learning, starting 22.1.2021 in zoom. More detailed instructions for those who registered by e-mail on 21.1.2021. Lectures, lecture assignments and an exercise in Moodle. The course has compulsory assignment requirements and the course evaluation will be based on the grades of intermediate tasks. No exam.

Learning activities and teaching methods:

Online and video lectures; lecture assignments and an exercise as a personal work.

Target group:

Master's students of process and environmental engineering; Bachelor's students of environmental engineering; Minor subject students.

Recommended or required reading:

Video lectures and information on recommended reading material will be provided during the course.

Assessment methods and criteria:

Continuous evaluation. Completion of all personal lecture assignments and the exercise during the course are mandatory.

Grading:

The evaluation is based on personal lecture assignments and an exercise during the course. Each intermediate task must be passed, and the scores obtained from assignments forms the final grade. The course uses a numerical grading scale 1-5. In the numerical scale, zero stands for a fail.

Person responsible:

D.Sc.(Tech.) Jenni Ylä-Mella

Other information:

This course replaces the course 488130A Waste management and resources recovery.
The course can also be taken in Finnish in autumn term period 1. (See the course description in Finnish.)

485303A: Soil Mechanics, 5 op

Voimassaolo: 01.08.2019 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Civil Engineering field

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS credits / 135 hours of work

Language of instruction:

Finnish

Timing:

The course unit is held in the spring semester, during period 4

Learning outcomes:

Upon completion this course, the student will understand 1) the fundamentals of consolidation theory, 2) calculation of settlement, 3) stability of slopes, 4) lateral earth pressures and calculations, 5) braced excavation, 6) bearing capacity of soils.

Contents:

Settlement calculation, consolidation settlement, shear strength of soils, stresses in soil from surface load, slope stability, bearing capacity, earth retaining structures.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures (24 h) and calculation exercises (16 h) also independent work (95 h)

Target group:

Students in Bachelor program of civil engineering

Prerequisites and co-requisites:

No

Recommended optional programme components:

-

Recommended or required reading:

Lecture handout and other materials delivered in lectures, Principles of Geotechnical Engineering by Das B. M and Craig's Soil Mechanics by Craig R.F.

Assessment methods and criteria:

Examination

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

771113P: Introduction to Geology I, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Oulu Mining School

Arvostelu: 1 - 5, pass, fail

Opettajat: Kari Strand

Opintokohteen kielet: Finnish

Leikkaavuudet:

ay771113P Introduction to Geology I (OPEN UNI) 5.0 op

ECTS Credits:

5 credits

Language of instruction:

Finnish

Timing:

1st year autumn

Learning outcomes:

Students have an understanding of the basic concepts of the Earth, from its composition and internal *structure* to the geological *processes* that has led to its evolution the present Earth as part of the solar system. They can tell how endogenic processes in the mantle and crust produce magmas and how magmas produce different igneous rock type upon emplacement below and on the Earth's surface. Students are able to recognise and classify common igneous rocks based on their mineral composition and are familiar with common metamorphic rocks and know the metamorphic facies concepts. They can relate deformation and metamorphism of the rocks to plate tectonic processes.

Contents:

Evolution of the Earth as part of the solar system, structure and composition of the Earth. Classification of igneous rocks, magmatism, origin and crystallisation of magmas, volcanism, metamorphism and formation of metamorphic rocks, plate tectonics and deformation structures.

Mode of delivery:

Face to face

Learning activities and teaching methods:

36 h lectures, 6 h exercises

Target group:

1st year geoscience students. The course is a good minor subject course for others.

Prerequisites and co-requisites:

Basic course in mineralogy (771102P) is parallel to this course.

Recommended optional programme components:

This course is intended as an introduction to the scope and methods of igneous and metamorphic petrology.

Recommended or required reading:

Martti Lehtinen, Pekka Nurminen and Tapani Rämö (1998) Suomen kallioperä – 3000 vuosimiljoonaa. Suomen Geologinen Seura, Gummerus Jyväskylä, ISBN 952-90-9260-1, Chapters 2-3. John Grotzinger & Thomas H. Jordan (2010 or 2014) Understanding Earth, 6th or 7th edition, Chapters 1-4, 6-7, 9-10, 12.

Assessment methods and criteria:

Written examination and identification test of rock types.

Grading:

ECTS Credits:

5 ECTS / 133 hours of work

Language of instruction:

Finnish

Timing:

1st year autumn

Learning outcomes:

Upon completion of the course, students should have acquired basic knowledge on the concepts and processes of surficial geology. Students should also be able to identify basic sediment types and soils.

Contents:

Basic concepts of surficial physical geology, weathering, erosion, sedimentation, and sediment types, soils and geological processes forming sedimentary deposits.

Mode of delivery:

Face to face teaching

Learning activities and teaching methods:

16 h lectures, 8 h exercises

Target group:

1st year Geoscience students. The course is a good minor subject course for others.

Prerequisites and co-requisites:

No

Recommended or required reading:

Handouts and John Grotzinger & Thomas H. Jordan (2010 or 2014) Understanding Earth, 6th or 7th edition, Chapters 5, 8, 15-21.

The availability of the literature can be checked from [this link](#).

Opintokohteen kielet: Finnish

Leikkaavuudet:

461104A Strength of materials II 5.0 op

ECTS Credits:

5 ect /135 hous of work

Language of instruction:

Finnish

Timing:

Lectures and exercises take place during the periods 1 - 2.

Learning outcomes:

The aim of this course is to provide students with a general view of the different areas concerning the strength of materials. Learning outcomes: Upon completion of the course, the student should be able to use the basic methods of fatigue strength estimation and fracture mechanics to estimate the life of simple structures. He/she is also able to solve the problem concerning the buckling of columns and beam columns. Moreover, the student is able to solve the problem of the bending of curved beams and free and warping torsion of beams.

Contents:

Basic methods of fatigue strength estimation; Basics of fracture mechanics; Buckling of columns and beam columns; Bending of curved beams; Free and warping torsion;

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

This course will be based on lectures 45 h and exercises 45 h and 45 h self-study during periods 1 - 2 and will have a final exam or mid-term exams.

Prerequisites and co-requisites:

Statics and Strength of Materials I

Recommended or required reading:

Pennala, E.: Lujuusopin perusteet, Moniste 407, Otatiето, 1998; Outinen, H., Koski, J., Salmi, T.: Lujuusopin perusteet, Pressus Oy, Tampere, 2000 ;Salmi, T., Virtanen, S.: Materiaalien mekaniikka, Pressus Oy, Tampere, 2008; Ylinen, A.:Kimmo- ja lujuusoppi I ja II. WSOY, 1976;. Bära brista, grundkurs i hållfasthetslära, AWE/Gebers, Stockholm 1979.

Assessment methods and criteria:

Midterm exams or one final exam is required. After the passed exercises a student is allowed to take part in an exam.

Grading:

Numerical grading scale 1-5.

Person responsible:

University Teacher Jari Laukkanen

461106A: Dynamics, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

461018A-02	Dynamics, exercises	0.0 op
461018A	Dynamics	4.0 op

ECTS Credits:

5 ECTS credits / 120 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 2st spring semester.

Learning outcomes:

The aim of this course is to provide students with the ability to examine the relationship between the forces on a solid body and the resulting motion, position, speed and acceleration of the body. Learning outcomes: Upon completing the required coursework, the student knows and is able to explain the fundamental quantities and the base laws of the classical mechanics. He/she is able to choose an appropriate coordinate system and analyze the motion - position, velocity, and acceleration - of the parts of a device. The student is able to draw a free body diagram of a moving system, and compose and derive the equations of motion for a system using the direct momentum method, the work-energy method, and the impulse-momentum method.

Contents:

Introduction; Kinematics of a particle; Plane kinematics of a rigid body; Kinetics of a particle; Basics of mechanical vibrations; Kinetics of a system of particles; Plane kinetics of a rigid body.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 45 h / Exercise 30 h / Self-study 45 h.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Salmi T., Virtanen S. (2006) *Dynamiikka*, Pressus; Salmi, T. (2003) *Dynamiikka 1, kinematiikka*, Pressus; Salmi, T. (2002) *Dynamiikka 2, kinetiikka*, 2. p., Pressus. Oheiskirjallisuus: Salonen, E.M. (2000) *Dynamiikka I*, 8. korj. p., Otatieto; Salonen, E.M. (1999) *Dynamiikka II*, 8. korj. p., Otatieto; Beer, F., Johnston, E. (2007) *Vector Mechanics for Dynamics*, 9.ed., McGraw-Hill

Assessment methods and criteria:

This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Moodle Study Portal.

Grading:

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuyksikkö: Field of Mechanical Engineering

Arvostelu: 1 - 5, pass, fail

Opettajat: Koivurova Hannu

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS credits / 90 hours of work

Language of instruction:

Finnish

Timing:

The course is held in the Autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:

Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to apply the theory of the strength of materials to different kind of design problems needed in engineering mechanics. He/she understand the fundamental concepts of mechanics of deformable solids; including static equilibrium, geometry of deformation, and material constitutive behavior. He/she can discuss the basic mechanical principles underlying modern approaches for modelling of various types of materials under a different type of loadings. This provide students with exposure to the systematic methods for solving engineering problems in solid mechanics. He/she can also build the necessary theoretical background for further structural analysis and design courses.

Contents:

The general equations of mechanics. The stress and strain state. Different material models; Linear elastic material, isotropic, transverse-isotropic and orthotropic material models. The concept of strain energy.

Theory of plasticity. Yield criterion, plastic flow rule and hardening. Limit state design. Introduction to visco elastic material and creep theory.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

Lectures 30 h / Exercise 30 h / Self-study 30 h.

Target group:

Students of the Bachelor Stage of the Mechanical Engineering Degree Programme

Prerequisites and co-requisites:

Recommended: Strength of Materials I and II and the knowledge of vector and matrix calculations.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Salmi, T., Virtanen, S. (2008) Materiaalien Mekaniikka. Pressus Oy.

Assessment methods and criteria:

This course utilizes continuous assessment. During the course, there are 2 intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Moodle Study Portal.

491102P: Introduction to solid earth geophysics, 5 op

Voimassaolo: 01.08.2017 -

Opiskelumuoto: Basic Studies

Laji: Course

Vastuuyksikkö: Oulu Mining School

Arvostelu: 1 - 5, pass, fail

Opettajat: Moisio, Kari Juhani

Opintokohteen kielet: Finnish

Timing:

Spring semester, period 3. Recommended at 1st or 2nd year of the Bachelor studies.

Learning outcomes:

Upon the completion of the course, a student can describe the position and role of geophysics in the field of the Earth system sciences, can describe the structure of the Earth and its neighbouring environment in space (spheres), their internal geophysical properties and the interactions between different spheres, can describe large scale transfer (movement) of rock material inside the Earth and on its surface (convection, plate tectonics) and can name most common geophysical research methods.

Contents:

An overview of geophysics. Solid Earth geo-physics and Earth Sciences. Properties, structure and dynamics of the Earth. Earth as a planet: shape, size, rotation, revolution. Earth's gravitational field. Isostasy. Deformation and rheology. Seismology: seismic waves and the internal structure of the Earth. Earth's geomagnetic field. Geothermics. Electric and electromagnetic methods.

Learning activities and teaching methods:

A specific target group is written in this field.

Prerequisites and co-requisites:

No specific prerequisites.

Recommended or required reading:

Lecture materials. U. Borén, E. Hjelt, S.-E., Karjalainen, T. ja Sirviö, J., 20014. Geofysiikka, Tunne maapallosi. WSOY, 191 p. Spring, period 3

Learning outcomes:

Upon completion of the course students should: (1) know the basic properties of rock; (2) be able to make stress or strain analysis to a rock sample and a rock structure; (3) be able to analyse rock failure under compression, shear and tension loads; (4) know which factors influence rock failure or fracture and know how those affect rock fracture; (5) know the basic principles and methods in rock support; (6) be able to do rock support design; (7) be able to apply rock mechanics theory to tunnelling, mining planning, rock drilling, rock excavation, slope engineering, and other rock-related engineering.

Contents:

The course will: (1) introduce basic properties and characteristics of rock and rock mass; (2) introduce stress analysis method; (3) present basic theory on rock failure or fracture; (4) introduce basic methods for measuring rock strengths (compressive, shear and tensile) in laboratory; (5) present methods for measuring in-situ stresses; (6) introduce methods for rock support; (7) give knowledge on how to apply rock mechanics to mining engineering and other types of rock engineering.

Mode of delivery:

Face to face teaching

Learning activities and teaching methods:

Lectures, seminars, written reports, and assignments (mine visit if available).

Target group:

Students from mining and mineral processing, geophysics and geology

Recommended or required reading:

Brady BHG and Brown ET. Rock Mechanics for underground mining, third edition. New York: Kluwer Academic Publishers, 2004.

Goodman RE. Introduction to rock mechanics, second edition. New York: John Wiley & Sons, 1989.
Zhang ZX. Rock fracture and blasting: theory and applications. Oxford: Elsevier, 2016 (Chapters 1, 3-7, 10, 17-19, 21-24).

Assessment methods and criteria:

Assessment methods include oral presentations, written reports, seminars, assignments and written examination. The total points gained from the above determine the final grade of the course, and it is given on the scale Fail-1-5.

- For grade 1, the student must be able to know and understand the basic knowledge in this course.
- For grade 2, the student must know how to make stress analysis and rock failure analysis.
- For grade 3 the student must be able to make a plan for rock support.
- For grade 4, the student must be able to make a plan for rock support and evaluate such a plan.
- For grade 5, the student must be able to apply the acquired knowledge to make a very good plan for mining and rock engineering operation by using rock mechanics. He or she must do an outstanding design in at least one aspect, e.g. he/she can find a problem related rock mechanics or rock fracture and know how to solve the problem or how to make improvement.

Grading:

The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.
