Opasraportti

(2016 - 2017)

Tutkintorakenteet

Degree Programme in Information Processing Science, Bachelor Level Studies 2016-2017, LuK

Tutkintorakenteen tila: published
Lukuvuosi: 2016-17
Lukuvuoden alkamispäivämäärä: 01.08.2016

Generel Studies (2 op)

810020Y: Orientation Studies, 2 op

Language and Communication Studies (10 op)

902002Y: English 1 (Reading for Academic Purposes), 2 op
902004Y: English 2 (Scientific Communication), 2 op
900095Y: Oral Communication, 2 op
901049Y: Second Official Language (Swedish), Oral Skills, 1 op
901048Y: Second Official Language (Swedish), Written Skills, 1 op
900094Y: Written Communication, 2 op

Basic Studies (40 op)

810122P: Computer Architecture, 5 op
811120P: Discrete Structures, 5 op
811177P: Humans as Users and Developers of Information Technology, 5 op
811168P: Information Security, 5 op
810136P: Introduction to Information Processing Sciences, 5 op
811167P: Introduction to Information Systems Design, 5 op
811122P: Introduction to Programming, 5 op
811174P: Introduction to Software Business, 5 op

Intermediate Studies (97 op)

812339A: Advanced Object-Oriented Programming, 5 op
811383A: Bachelor Thesis, 7 op
811395A: Basics of Databases, 5 op
811379A: Basics of Human Computer Interaction, 5 op
811344A: Basics of Statistical Data Analysis for Information Processing Science, 5 op
2

813316A: Business Process Modeling, 5 op
811312A: Data Structures and Algorithms, 5 op
811394A: Database systems, 5 op
812332A: Information Systems Design, 5 op
812305A: Information Systems in Organisations, 5 op
521150A: Introduction to Internet, 5 op
811393A: Introduction to research work, 5 op
813307A: Maturity test, 0 op
812342A: Object Oriented Analysis and Design, 5 op
812341A: Object-Oriented Programming, 5 op
811366A: Project Work, 10 op
811391A: Requirements Engineering, 5 op
815345A: Software Architectures, 5 op
811346A: Software Engineering, 5 op
811375A: User Interface Programming, 5 op

Minor Studies (25 op)

Other Studies (1 op)

030005P: Information Skills, 1 op

Degree Programme in Information Processing Science, Master’s Level Studies (120 ECTS)

Tutkintorakenteen tila: published

Lukuvuosi: 2016-17

Lukuvuoden alkamispäivämäärä: 01.08.2016

Compulsory Studies for all Master's Level Students (vähintään 50 op)

813613S: Master's Thesis, 30 op
813627S: Master's Thesis Seminar, 2 op
813607S: Maturity test, 0 op
817609S: Project Seminar, 3 op
813621S: Research Methods, 5 op
817612S: Research and Development Project, 10 op

Specialization Studies (vähintään 40 op)

For the master's studies, a student should choose either information systems or software engineering as his/her study orientation. The choice will be made at the end of the bachelor studies or at the latest at the beginning of the master’s studies, by defining it explicitly as part of the personal study plan.

Software Engineering Oriented Module

815303A: Embedded Software Development Environments, 5 op
815657S: Open Source Software Development, 5 op
815305A: Real Time Distributed Software Development, 5 op
817602S: Software Development in Global Environment, 5 op
815662S: Software Engineering Management, Measurement and Improvement, 5 op
815663S: Software Engineering Research, 5 op
815312A: Software Production and Maintenance, 5 op
815311A: Software Quality and Testing, 5 op
Information Systems Oriented Module

813626S: Emerging Technologies and Issues, 5 op
812351A: Enterprise Systems, 5 op
817604S: ICT and Organizational Change, 5 op
812349A: IT Infrastructure, 5 op
813623S: Information Security Policy and Management in Organisations, 5 op
813625S: Information Systems Theory, 5 op
812331A: Interaction Design, 5 op
817603S: System Design Methods for Information Systems, 5 op

Optional Studies (vähintään 30 op)

Optional studies must be at least 30 ECTS credit points. Optional courses can be chosen either in the advanced (Advanced Module) supply or the second specialisation option compulsory courses, or both. Also a minor, or carried out elsewhere in higher education approved elective courses.

Optional Studies for IS Oriented Module Students

812649S: Advanced Research Methods, 5 op
812650S: Advanced Topics in Human-Centred Design, 5 op
811600S: Emerging Trends in Software Engineering, 5 op
811601S: Emerging Trends in Software Testing, 5 op
812651S: ICT and Behaviour Change, 5 op
811392A: Preparatory Course for MSc Studies, 5 op
813630S: Software Business Development, 5 op
813620S: Software Business Management, 5 op
812670S: The Next Generation of the Web, 5 op
812671S: User Experience (UX) and Usability Evaluation, 5 op
814601S: Work Experience in ICT responsibilities, 5 op

Optional Studies for SE Oriented Module Students

812649S: Advanced Research Methods, 5 op
812650S: Advanced Topics in Human-Centred Design, 5 op
811600S: Emerging Trends in Software Engineering, 5 op
811601S: Emerging Trends in Software Testing, 5 op
812651S: ICT and Behaviour Change, 5 op
811392A: Preparatory Course for MSc Studies, 5 op
813630S: Software Business Development, 5 op
813620S: Software Business Management, 5 op
812670S: The Next Generation of the Web, 5 op
812671S: User Experience (UX) and Usability Evaluation, 5 op
814601S: Work Experience in ICT responsibilities, 5 op

Minor or other studies

Masters Degree Programme in Software Systems and Service Development in the Global Environment (GS3D) 2016-2017 (120 op)

Tutkintorakenteen tila: published
Lukuvuosi: 2016-17
Lukuvuoden alkamispäivämäärä: 01.08.2016

Compulsory Studies (85 op)
Optional Studies (vähintään 25 op)

Optional studies must be at least 25 ECTS credit points. Optional courses can be chosen in the optional course pool (see below). Also a minor, or carried out elsewhere in higher education approved elective courses.

813625S: Information Systems Theory, 5 op
815663S: Software Engineering Research, 5 op

Compulsory Studies Optional Courses (5 op)

813630S: Software Business Development, 5 op
813620S: Software Business Management, 5 op

European Masters in Software Engineering (EMSE).

Tutkintorakenteen tila: published
Lukuvuosi: 2016-17
Lukuvuoden alkamispäivämäärä: 01.08.2016

First Year in Oulu (60 op)

815303A: Embedded Software Development Environments, 5 op
811600S: Emerging Trends in Software Engineering, 5 op
811601S: Emerging Trends in Software Testing, 5 op
812349A: IT Infrastructure, 5 op
521147S: Mobile and Social Computing, 5 op
815657S: Open Source Software Development, 5 op
521260S: Programmable Web Project, 5 op
815305A: Real Time Distributed Software Development, 5 op
817602S: Software Development in Global Environment, 5 op
815662S: Software Engineering Management, Measurement and Improvement, 5 op
815312A: Software Production and Maintenance, 5 op
815311A: Software Quality and Testing, 5 op

Second Year in Oulu (60 op)

812331A: Interaction Design, 5 op
813613S: Master's Thesis, 30 op
813627S: Master's Thesis Seminar, 2 op
813607S: Maturity test, 0 op
Optional courses, suggestions (12 op)

813627S: Master's Thesis Seminar, 2 op
813621S: Research Methods, 5 op
815663S: Software Engineering Research, 5 op

Tutkintorakenteisiin kuulumattomat opintokokonaisuudet ja -jaksot

814342A: , 5 - 15 op
811336A: Cooperation in information processing, 1 - 5 op
814311A: Internship in ICT-duties, 3 - 5 op
815338A: Principles of Programming Languages, 5 op
814340A: Small-Group Tutoring, 3 op
812315A: Software Construction, 10 op

Opintojaksojen kuvaukset

Tutkintorakenteisiin kuuluvien opintokohteiden kuvaukset

810020Y: Orientation Studies, 2 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: General Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits:
2 ECTS credits/53 hours of work.

Language of instruction:
finnish
Timing:
The course is held in the autumn semester, during periods 1 and 2. The course is taken at the beginning of the studies.

Learning outcomes:
After passing the course a student:

- Recognises from the viewpoint of his/her university studies the actions and services of the most important units, organisations and societies and his/her action possibilities in them;
- Recognises the characteristics of the university-level studies, own curriculum and the discipline of Information Processing Science from the viewpoint of his/her studies and their planning;
• Is able to discuss on the purpose of his/her studies and the upcoming study path;
• Is able to create and present his/her own Personal Study Plan (PSP);
• Knows the city of Oulu and its services.

Contents:

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Common occasions and lectures 16h, small-group activities (student tutoring) 15h, PSP process 4h, independent personal work 8h and teacher tutoring 10h.

Target group:
BSc students.

Recommended or required reading:
Lecture materials, www pages, study guides, brochures and forms.

Assessment methods and criteria:
Active participation in lectures, common occasions, small group activities (student tutoring) and teacher tutoring. Creating and returning PSP to WebOodi.

Grading:
Pass/fail

Person responsible:
Leena Ventä-Olkkonen

902002Y: English 1 (Reading for Academic Purposes), 2 op

Voimassaolo: 01.08.1995 -
Opiskelumuoto: Language and Communication Studies
Laji: Course
Vastuuysikkö: Languages and Communication
Arvostelu: 1 - 5, pass, fail  
Opintokohteen kielet: English

Proficiency level:  

Status:  
This course is mandatory for students of the following degree programmes:

**Faculty of Science**  
- Biology  
- Chemistry  
- Mathematical Sciences  
- Physics

**Oulu Mining School**  
- Geosciences degree programme

**Faculty of Information Technology and Electrical Engineering**  
- Department of Information Processing Science

Students in the Department of Geography take English 3.

Engineering students in the following programmes take their English courses in the Faculty of Technology:  
*Oulu Mining School:*  
- Mining Technology and Mineral Processing degree programme

Faculty of Information Technology and Electrical Engineering  
- Department of Electrical Engineering  
- Department of Communications Engineering  
- Department of Computer Science and Engineering

Please consult the Faculty Study Guide to establish the language requirements for your own degree program.

**Required proficiency level:**  
English must have been the A1 or A2 language at school or equivalent English skills should have been acquired otherwise.

**ECTS Credits:**  
2 ECTS credits (total work load 54 hours including classroom meetings.)

**Language of instruction:**  
English

**Timing:**  
Biology: 1st year spring term  
Chemistry: 1st year autumn term  
Geology: 1st year spring term  
Information Processing Science: 1st year spring term  
Mathematical Sciences (pedagogy): 1st year spring term  
Mathematical Sciences: 2nd year autumn term  
Physical Sciences: 1st year autumn term

**Learning outcomes:**  
By the end of the course, you are expected to be able to  
- have acquired effective vocabulary learning techniques  
- be able to distinguish parts of words to infer meanings  
- utilize your knowledge of text structure and cohesion markers to understand academic texts  
- extract information and learn content from English readings in scientific and professional contexts

**Contents:**  
The course will focus on reading strategies; these include recognizing how texts are organized, identifying key points in a text, and understanding words in context. Vocabulary work in the course will focus on a) academic vocabulary, as used in formal scientific writing, and b) using your knowledge of the meanings of parts of words (affixes) to infer meaning.

**Mode of delivery:**  
Contact teaching

**Learning activities and teaching methods:**  
The scope of the course is 2 op (54 hours student workload).

**Target group:**  
1st year students of Biology, Chemistry, Geology, Information Processing Science, Physics, and Mathematics (pedagogy); 2nd year students of Mathematics

**Prerequisites and co-requisites:**
Recommended optional programme components:
Students are also required to take 902004Y Scientific Communication, which is taken AFTER completion of this course.

Recommended or required reading:
Photocopies will be provided by the teacher and/or required texts will be accessible online or from the university library.

Assessment methods and criteria:
Student work is monitored by continuous assessment. You are required to participate regularly and actively in all contact teaching provided, and successfully complete all required coursework. There will be three monthly tests on material covered so far. Read more about assessment criteria at the University of Oulu webpage.

Grading:
Pass/Fail

Person responsible:
Karen Niskanen

Working life cooperation:

Other information:
N.B. Students with grades laudatur or eximia in their A1 English school-leaving examination can be exempted from this course and will be granted the credits by the Faculty of Science.

902004Y: English 2 (Scientific Communication), 2 op

Voimassaalo: 01.08.1995
Opiskelumuoto: Language and Communication Studies
Laji: Course
Vastuuysikkö: Languages and Communication
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English
Leikkaavuudet:
  ay902004Y English 2 (Scientific Communication) (OPEN UNI) 2.0 op

Proficiency level:
B2/C1 on the CEFR scales

Status:
This course is mandatory for all 2nd year students (except geographers) who will have English as their foreign language in their B.Sc. degree. This includes the students who were exempted from 'Reading for Academic Purposes'(902002Y). Please consult the faculty study guide to establish the language requirements on your own degree programme.

Required proficiency level:
Students taking this course must have had English as the A1 or A2 language at school or the equivalent English skills should have been acquired otherwise. The course 'Reading for Academic Purposes' (902002Y) is a pre-requisite, unless exempted.

ECTS Credits:
The student workload is 53 hrs work/ 2 ECTS credits.

Language of instruction:
English

Timing:
Biology: 2nd year autumn term
Chemistry: 2nd year spring term
Geology: 2nd year spring term
Information Processing Science : 2nd year autumn term
Mathematics: 2nd year spring term
Physics: 2nd year autumn term

Learning outcomes:
By the end of the course, you are expected:
1. to have demonstrated your use of appropriate strategies and techniques for communicating effectively in English in an academic context.
2. to have demonstrated the ability to prepare and present scientific subjects to your classmates, using appropriate field-related vocabulary.
Contents:
Skills in listening, speaking, and presenting academic topics are practised in the classroom, where there is an emphasis on working in pairs and small groups. Homework tasks include online lecture listening and reading, preparation for classroom discussions and written work to support the classroom learning.

Mode of delivery:
Contact teaching

Learning activities and teaching methods:
Contact teaching 28 hours, homework 28 hours

Target group:
2nd year students of Biology, Chemistry, Geology, Information Processing Science, Mathematics, Physics

Prerequisites and co-requisites:
-

Recommended optional programme components:
Also required: 902002Y Reading for Academic Purposes Englannin kieli 1

Recommended or required reading:
Course materials will be provided by the teacher.

Assessment methods and criteria:
Continuous assessment is based on regular attendance, active participation in all lessons and the successful completion of all homework tasks.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
Pass / fail.

900095Y: Oral Communication, 2 op

Voimassaolo: 01.08.2014 -
Opiskelumuoto: Language and Communication Studies
Laji: Course
Vastuuyksikkö: Languages and Communication
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Proficiency level:
-

Status:
This course unit together with the course unit 900094Y Written Communication I (TOL) are compulsory to students of Information Processing Science. The students can also opt to complete their studies by taking the course unit 900099Y Scientific Communication (TOL).

Required proficiency level:
-

ECTS Credits:
2 ECTS credits

Language of instruction:
Finnish

Timing:
3rd year of studies

Learning outcomes:
Upon completion of the course unit the student should be able to prepare and give an illustrative and understandable oral presentation on a topic related to his/her own field in a way that suits the audience and the situation. The student should be able to function purposefully in various situations where he/she is working by himself/herself or as a part of a group. He/she should be able to give, receive and process constructive criticism. The student should be able to critically evaluate his/her own oral communication skills and understand the significance of oral communication in university studies, scientific activity and as a part of his/her professional expertise.

Contents:
Presentation exercises, group work, communicator image and its significance, the speech communication situation and speech communication skills, structure of a speech, preparing a speech, goals and distinctive features of scientific interaction, communicating as an expert in scientific and professional contexts, procedures and practices in discussions, negotiations and meetings, observation and analysis of speech communication situations.

**Mode of delivery:**
multi-modal teaching

**Learning activities and teaching methods:**
Contact teaching 21 hrs, independent work 33 hrs.

**Target group:**
students of information processing science

**Prerequisites and co-requisites:**
-

**Recommended optional programme components:**
-

**Recommended or required reading:**
Material provided by teacher, subject to a charge

**Assessment methods and criteria:**
Participation to the contact teaching, independent work and completion of the given assignments
Read more about [assessment criteria](#) at the University of Oulu webpage.

**Opiskelumuoto:** Language and Communication Studies
This course together with the course unit 900095Y Speech Communication are compulsory to students of Information Processing Science. The students can also opt to complete their written communication studies by taking the course unit 900099Y Scientific Communication.

**Proficiency level:**

**Status:**

Upon completion of the course unit the student should be conversant with text analysis. The student should be able to write various work and study-related texts and act purposefully in different kinds of written communication situations. He/she should be able to give and receive constructive criticism. The student should be able to critically analyse his/her own writing process and the texts he/she produces. The student should understand the significance of writing skills as a part of his/her professional expertise.

**Contents:**

Notions about writing, writing as a process, group writing, critical and analytical reading, different kinds of work and study-related texts, formal style.

**Mode of delivery:**

online teaching

**Learning activities and teaching methods:**

Introductory meeting (1 hour) and online studying (approximately 54 hours).

**Target group:**

the students of information processing science

**Prerequisites and co-requisites:**

-

**Recommended optional programme components:**

-

**Recommended or required reading:**

the material in the Optima learning environment

**Assessment methods and criteria:**

Participation in the introductory meeting, independent study and completion of given assignments. Read more about assessment criteria at the University of Oulu webpage.

Opintokohteen kielet: Finnish

Leikkaavuudet:
521267A Computer Engineering 4.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
finnish

Timing:
The course is held in the spring semester, during period 3. It is recommended to complete the course in the 1st study year.

Learning outcomes:
After completing the course, students understand and manage platforms for software execution and performance of the structure and activities related to performance, resource needs, and error situations. Students master the basic vocabulary, which is enables to communicate and document the software development, particularly in the close to device level applications such as embedded software, mobile systems, multimedia and scientific computing.

Contents:
Basics of digital logic and components of a processor Formats of digital information The processor and its functions The processor instruction set Assembly language Memory management Input and output Interrupts, device drivers and BIOS Multimedia support Mobile processors Parallel computing.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40h, home exercises 15h, laboratory exercises 15h, examination either through 2 intermediate exams (preparation 65h) or through final exam (preparation 65h).

Target group:
BSc students.

Recommended or required reading:

Assessment methods and criteria:
Exam and assignments.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Markku Oivo.

811120P: Discrete Structures, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuyskikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Ari Vesanen

Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits / 133 hours of work
Language of instruction:
finnish

Timing:
The course is held in the autumn semester, during period 1. It is a recommended to complete the course at the 1st autumn semester.

Learning outcomes:
The student is able to interpret simple mathematical notation and write it by himself/herself. He/she can define the most important concepts that appear in the basic theoretical structures (see Contents) accurately and describe the idea of the definitions. The student also masters the most essential results and (algorithmic) methods of the basic structures and is capable of applying them in easy examples. He/she is able to evaluate certain kinds of simple practical problems in computer science, to choose appropriate theoretical methods to solve the problems, and finally to apply the chosen methods.

Contents:
1. The concept of algorithm;
2. Number systems and the conversion of bases;
3. Logic (proposition calculus, predicate calculus basics);
4. Set theory, relations and functions (finiteness/infinity, induction);
5. Basic number theory (divisibility and the respective algorithms);
6. Combinatory (principles of counting);
7. Graph theory.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 40h, exercises 30h, autonomous work about 64h.

Target group:
BSc students

Recommended or required reading:

Assessment methods and criteria:
Lectures by final exam; mandatory exercises by self-contained work.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Ari Vesanen

811177P: Humans as Users and Developers of Information Technology, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:
ay811177P Humans as Users and Developers of Information Technology (OPEN UNI) 5.0 op

ECTS Credits:
5 ECTS credits/133 hours of work

Language of instruction:
Finnish.

Timing:
The course is held in the autumn semester, during period 2. It is a recommended to complete the course at the 1st autumn semester.

Learning outcomes:
After completing the course, students will be able to examine humans as both users and developers of information technology. The student learns core concepts of the phenomenon, and understands their meaning in relation to practice. Students are also familiar with the background of usability research and some of its scientific theories. Students are able to observe and specify a variety of use situations and user experiences of information technologies. Students also understand the challenges of the information technology developers when targeting to create pleasant use experiences for the users of these technologies. After completing the course, students also realize they have started their own journey to become an expert in information technology development.

Contents:
The key themes and concepts of the course are the diversity of information technology, humans as users and developers of information technology, usability, use and user experience, user-centred design.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures (24h), home assignments and written task based on required reading (about 106h).

Target group:
BSc students.

Recommended or required reading:
Antti Oulasvirta (ed.): “Ihmisen ja tietokoneen vuorovaikutus” (2011), parts I and II. In addition, the material during lectures and other supplementary material.

Assessment methods and criteria:
Course assessment is mainly based on the pre-assignment, home assignments, and individual essay based on the required reading. In addition, one may improve one’s own grade by optional advanced assignment. Assessment criteria will be available in the web-based learning environment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Minna Isomursu

811168P: Information Security, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettaja: Mari Karjalainen
Opintokohteen kielet: Finnish
Leikkaavuudet:
    ay811168P    Information Security (OPEN UNI)    5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course in the 2nd spring semester.

Learning outcomes:
After completing the course a student is able to define essential information security concepts, is aware of the common types of security risks, and their managerial and technical protection mechanisms. She/he recognizes the different phases of secure systems development and can describe the fundamental characteristics of risk management. The student gets familiar with basics of technical information security methods.
Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Contact teaching (lectures and group exercises) 30 h, technical exercises 12 h, home exercises 26 h, exam preparation 64 h

Target group:

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
Individual and group exercised pass/fail, exam 0-5

Grading:
Numerical scale 1-5 or fail.

Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet: 

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1. It is recommended to complete the course at the 1st autumn semester.

Learning outcomes:
Student is able to discuss and report on course subject areas using terms, concepts and models presented in the course. Student can search information about course topics, selecting and judging the relevance of found information, and write short reports based on the information, including referencing to sources.

Contents:
The course gives an overview of the whole bachelor/master curriculum and to various disciplines behind the curriculum. This is connected with lectures on how practical IT work is conducted in various organizations. Additionally the course discusses about information seeking, source criticism, and report writing.

Mode of delivery:
Face-to-face teaching, self-study.

Learning activities and teaching methods:
Lectures 20 h, tutored exercise work sessions 20 h, self-study 95 h.

Target group:
BSc students

Recommended optional programme components:
Recommended or required reading:
Lectures, additional material in Optima, material searched by students themselves.

Assessment methods and criteria:
1. Participatory way: 5 weekly assignments (a 10%) + final essay (50%) -- 2. self-study way: essay (50%) + final exam (50%)

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Kari Kuutti

811167P: Introduction to Information Systems Design, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mikko Rajanen
Opintokohteen kielet: Finnish

The course is held in the spring semester, during period 3. It is recommended to complete the course in the 2nd spring semester.

Learning outcomes:
After completing the course, the student will be able to Explain the main areas of the information system design on technical level, main design process models for the information system design, basics of the requirement gathering, basics of the information system initialization, and basics of how to evaluate information systems.; Produce use-case descriptions, use-case diagrams and other types of diagrams and descriptions needed to model the operational environment of the information system.
Contents:

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 27 h, exercises 21 h, assignment 85 h, exam 3 h.

Target group:
BSc students.

Recommended or required reading:

Assessment methods and criteria:
Exam and mandatory assignment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Mikko Rajanen

811122P: Introduction to Programming, 5 op

Opiskelumuoto: Basic Studies
Laji: Course
Vastuuyksikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Ilkka Räsänen
Opintokohteen kielet: Finnish
Leikkaavuudet:
ay811122P Introduction to Programming (OPEN UNI) 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1. It is recommended to complete the course at the 1st autumn semester.

Learning outcomes:
After completing the course the student is able to design a programme by splitting main problem into solvable sub problems. The outcome of design process is modules which she/he is able to write by using chosen programming language. Student is able to use selection and loop structures to control execution of a module and control execution between modules. Student is able to use basic data types for saving and processing data and she/he is able to use right operations to this data. Student is able to use arrays to handle large amounts of same type of data and is able to use control structures to flexibly manipulate the data of arrays. Student is able to use pointers for example to enhance passing large amount of data between modules and at the same time taking care of the risks of using pointers. Student is able to use structured data types that contain fields of different data types and is able to manipulate the fields of these data structures. Student is able to programmatically use files to save permanently large amount of data she/he is able programmatically read data from files for further processing.

Contents:

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40h, home programming assignment 24h, self-study 70h.

Target group:
BSc students

Recommended or required reading:
Course book: Deitel, Deitel: C HOW TO PROGRAM; Pearson Education Inc. 2007

Assessment methods and criteria:
1. Final exam and exercise points and programming assignment. OR 2. Weekly exams and exercise points and home programming assignment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Ilkka Räsänen

811174P: Introduction to Software Business, 5 op

Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Marianne Kinnula
Opintokohteen kielet: Finnish

Leikkaavuudet:
811178P Technology Business and Innovations 5.0 op
ay811174P Introduction to Software Business (OPEN UNI) 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 1st spring semester.

Learning outcomes:
After completing the course, a student can:
• Explain how the industry is structured;
• Describe the software industry's business logic as typically used in business models and the reasoning behind
their use;
- Describe the important areas of the software business.

Contents:
This course provides an overview of software business from three different viewpoints: software industry, business logic, and functions of a software company. The course topics include history of software business, structuring and clusters of software industry, business models in software industry, networking and outsourcing, growth and development of a software company, software marketing and sales, and internalization of a software company.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 26-30h, exercises 20h, independent work 54-58h, take home examination 30h.

Target group:
BSc students.

Recommended optional programme components:
-

Recommended or required reading:
Course material and related literature.

Assessment methods and criteria:
Assignments, take home examination.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Marianne Kinnula

812339A: Advanced Object-Oriented Programming, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Antti Siirtola
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits/133 hours of work.

Language of instruction:
finnish

Timing:
The course is held in the spring semester, during period 3. It is recommended to complete the course in the 2nd spring semester.

Learning outcomes:
After completing the course, the student can construct programs that apply inheritance, composition, polymorphism, generics, and library routines. The student also can construct programs corresponding to given UML diagrams and vice versa. Furthermore, the student is able to describe most common design patterns and to design and construct programs that contain the design patterns presented in the course. Finally, the student has the basics of version control, can apply the principles of unit testing to an object-oriented program, is able to document a program, and can exploit program analysis tools.

Contents:
Software development tools, the basics of object oriented programming, documenting, unit testing, composition, inheritance, polymorphism, UML charts and code, generics, libraries, containers, and design patterns.
Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 32h, laboratory exercises 24h, weekly assignments and independent work 72h.

Target group:
BSc students.

Prerequisites and co-requisites:
Compulsory prerequisites: 811222P Introduction to Programming or a corresponding course and 812341A Object-oriented Programming.
Recommended prerequisites: 812342A Object Oriented Analysis and Design 811312A Data Structures and Algorithms.

Recommended or required reading:
Bruce Eckel: Thinking in C++ Volume 1, 2nd edition Bruce Eckel: Thinking in C++ Volume 2 The manuals of the tools used throughout the course
Other material announced during the course 45.

Assessment methods and criteria:
Weekly assignments (preferred) or final exam + programming assignment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Antti Siirtola

Working life cooperation:
no

811383A: Bachelor Thesis, 7 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits:
7 ECTS credits/187 hours of work

Language of instruction:

Timing:
3rd year, timing is free

Learning outcomes:
After completing the course, a student is able to:

• Produce their own research work, stage a concrete plan and refine it as the work progresses;
• Find the source materials as well as the library electronic databases;
• Analyse scientific texts and make them a source of criticism;
• Produce well-structured scientific text;
• Identify their work against future problems;
• Ask for advice and the counsellor will use the guidance in favour of work-testing plan.

Contents:
Each student will be guided based on the research literature.

Mode of delivery:
Guided self-motivated work

Learning activities and teaching methods:
Students prepare calendars of work as part of the research plan. The student has personal meetings with the supervisor or instructor to discuss topic selection and scoping, the research plan, the final review of the literature and a thesis draft. The director, depending on the thesis, may also be associated with other students via meetings for interaction.

**Target group:**
Bachelor level students.

**Prerequisites and co-requisites:**
Compulsory basic studies in the major subject (about 60 credits) completed, in particular an introduction to research work-study modules to prepare the thesis for BSc. During the course or immediately after, the course is part of the pre-Master’s thesis. Written final test conducted on the research topic.

**Recommended optional programme components:**

**Recommended or required reading:**
The student's self-written material, institution and the instructor advice and scientific research and support material. Written work must be in compliance with the institution's formal guidelines.

**Assessment methods and criteria:**
Course requires a Bachelor's thesis preparation. In addition, the course may be included in the pilot, as determined by scientific research-related tasks.
Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
Approved / failed

**Person responsible:**
Raija Halonen

**Working life cooperation:**
No

811395A: Basics of Databases, 5 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** lisakka, Juha Veikko

**Opintokohteen kielet:** Finnish

**ECTS Credits:**
5 ECTS credits / 133 hours of work.

**Language of instruction:**
Finnish. If at least four non-Finnish students take the course, an English exercise group will be organised.

**Timing:**
The course is held in the spring semester, during period 3. It is recommended to complete the course in the 1st spring semester.

**Learning outcomes:**
In addition, they have knowledge of modern non-relational database solutions (such as data warehouses and NoSQL-databases) and they have commanding knowledge of making use of those non-relational databases (such as data mining and Big data techniques).

**Contents:**
Conceptual modelling (ER- and EER-diagrams), relational model (theory, databases, query techniques and normalization), transactions.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 45 h, compulsory exercises 24 h, reading 20 h, exams 21 h and self-studying 23 h.

**Target group:**
Bachelor students
Prerequisites and co-requisites: 
The student knows basics of programming.

Recommended or required reading: 

Assessment methods and criteria: 
The course is divided to five parts. All parts must be passed in a year. Students must show they achieve at least half of required knowledge of each part.

Grading: 
fail, 1-5

Person responsible: 
Jua Iisakka

811379A: Basics of Human Computer Interaction, 5 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:
  ay811379A Basics of Human Computer Interaction (OPEN UNI) 5.0 op
  812327A Introduction to HCI design 4.0 op

ECTS Credits: 
5 ECTS credits/133 hours of student’s work

Language of instruction: 
Finnish

Timing: 
2nd year, period 3, bachelor level.

Learning outcomes: 
Upon completion of the course, the student will be able to define basic concepts of user interface design, introduce basic design process with design and evaluation methods and tasks, and apply graphical user interface design from the viewpoint of a certain user group and system.

Contents: 
Basic concepts of user interface design and usability evaluation; user-centred design process; gathering of user data, analysis, expert evaluation and design by prototyping, user-based evaluation; universal design and user support; user interface description.

Mode of delivery: 
Face-to-face teaching, self-study.

Learning activities and teaching methods: 
Lectures (20 h), guided group assignment tasks in exercises (21 h) and without guidance in assignment groups (58 h); seminar (3h) individual tasks (31 h).

Target group: 
2nd year, bachelor level students.

Prerequisites and co-requisites: 
Humans as Users and Developers of Information Technology (811177P) -course or related knowledge.

Recommended optional programme components: 

Recommended or required reading: 
Dix et al. (2004, third or later edition) Human-Computer Interaction and lecture and assignment materials.

Assessment methods and criteria: 
During the course, the students will be compiling the group assignments and integration tasks on their implementation. These will be assessed based on the learning outcomes of the course. The assessment criteria and the requirements will be explained in detail during the opening lecture of the course.
811344A: Basics of Statistical Data Analysis for Information Processing Science, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouni Markkula
Opintokohteen kielet: Finnish

ECTS Credits: 5 ECTS credits / 133 hours of work
Language of instruction: finnish

Timing: The course is held in the spring semester, during period 3. It is recommended to complete the course in the 3rd spring semester.

Learning outcomes: After completion of the course, the student can identify and describe the basic properties and types of statistical data and is able to apply them in tasks related to information processing sciences. The student is able to specify metrics and handle statistical variables. She or he is also able to describe and analyse statistical data with basic methods and report the results. The student knows also basics of R-language and is able to use it for conducting statistical analysis.

Contents: Types of statistical data, measurement and variables, data collection methods, sampling, management of statistical data, descriptive statistics, hypothesis testing, basics of data analysis, graphical presentation of statistical data, reporting of statistical analyses, basics of R.

Mode of delivery: Face-to-face teaching.

Learning activities and teaching methods: Lectures 36 h, exercises 18 h, independent work 80 h.

Target group: BSc students.

Recommended or required reading: Lecture slides, given literature and exercise tasks. Literature: Blaikie (2003), Analyzing Quantitative Data; Wild & Seber (2000), Chance Encounters; Venables, Smith & the R Core Team (2014), An Introduction to R; Other literature specified in the course.

Assessment methods and criteria: The course is evaluated based on passed exam and acceptable exercise tasks.

Grading: Numerical scale 1-5 or fail.

Person responsible: Jouni Markkula

813316A: Business Process Modeling, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.
Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:
After completing the course, students are able to model and develop business processes, as well as use a computer-based process modeling tool. The students are able to distinguish between business process change on the enterprise level, business process level and the implementation level, and to and evaluate these business process changes.

Contents:
Process architecture and how it can be fitted to the organisation, process modelling, process performance measurement, understanding process-related problems, process development, software tools for modelling and analysing processes, exercises.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 26h (or exam), exercises 12h, individual assignments (lecture assignments, small process model, etc.) 25h, case study assignment (group work) 30h, large process model (group work) 40h.

Target group:
BSc students.

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
This course unit utilizes continuous assessment. Students can either participate in the lectures (min. 85% attendance required) or take the exam. All students will write lecture assignments, a case study report, and will create a process models with a software tool. The assessment of the course unit is based on the learning outcomes of the course unit.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Karin Väyrynen (on leave, substitute Jukka Kontula)

Working life cooperation:
No

811312A: Data Structures and Algorithms, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Ari Vesanen
Opintokohteen kielet: Finnish
Leikkaavuudet: 521144A Algorithms and Data Structures 6.0 op

ECTS Credits: 5 ECTS credits / 133 hours of work.

Language of instruction: Finnish. One English exercise group will be arranged.

Timing: The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 2nd study year.

Learning outcomes: After completing the course, the student can describe the concept of algorithm and explain what correctness and time complexity of algorithms mean. Furthermore, the student is able to explain the design paradigms presented in the course and to describe the complexity classes of relevant sorting algorithms. The student can analyse simple algorithms, i.e. to prove their correctness and evaluate their time complexity. Moreover, the student is able to describe the basic data structures and apply essential graph algorithms. Finally, the student can construct suitable data structures and algorithms for given problems; the student can also justify the choice of a data structure or an algorithm for an application.

Contents: The concept and analysis of algorithms, sorting and searching algorithms and their complexity, algorithm design paradigms, the concept of data structure and basic data structures, hash tables, binary search trees, graphs and their algorithms.

Mode of delivery: Face-to-face teaching.

Learning activities and teaching methods: Lectures 48h, exercises 21h, assignment (27), independent work 39h.

Target group: BSc students.

Prerequisites and co-requisites: Mastery of subject matter of the course “Discrete Structures” is required.

Recommended optional programme components:

Recommended or required reading: Cormen, Leiserson, Rivest, Stein: Introduction to algorithms, 2nd edition, MIT Press 2001 (or later). From this edition chapters 1–4, 6–13, 15–16, 22–24, Appendix A and B are covered.

Assessment methods and criteria: Exam and assignment. Exam will be graded 1-5 if accepted. Assignment graded accepted/failed. Final grade will be the same as exam's grade.

Grading: Numerical scale 1-5 or fail.

Person responsible: Ari Vesanen

Working life cooperation: No

811394A: Database systems, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: lisakka, Juha Veikko
Opintokohteen kielet: Finnish
ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
Finnish, no possibility for non-Finnish to pass the course.

Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course in the 2nd study year.

Learning outcomes:
After completing the course, students have constructed a small database application. They are able to build simple XML database and they can use object-relational database with object-oriented program.

Contents:
Relational database application, Object- and XML extensions in relational databases. Modern database solutions and the use of them.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and seminars 41h, computer exercises 54, self-study 32h.

Target group:
Bachelor students.

Prerequisites and co-requisites:
Basics of database course (such as 811380A) and Object-oriented analysis and design course (such as 812346A) are compulsory prerequisites.

Recommended or required reading:
Will be announced in lectures.

Assessment methods and criteria:
Will be announced in lectures.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Juha Isakka.

812332A: Information Systems Design, 5 op

Voice: 01.08.2015 -
Opiskelumoto: Intermediate Studies
Laji: Course

Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Pasi Karppinen
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits / 133 hours of work.

Timing:
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 3rd autumn semester.

Learning outcomes:
After completing the course, the student is able to understand the link between information system design and organizational development, and to apply such a system design method in an organizational context.

Contents:
During the course the students complete a group exercise (typically in groups of 4 persons) using Contextual Design method and its design stages that lead to actual information systems implementation.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 24 h, exercises 18 h, seminar 12 h.

**Target group:**
BSc students

**Prerequisites and co-requisites:**
Prerequisites are 811169P Introduction to Information Systems Design and 812346A Object Oriented Analysis and Design.

**Recommended or required reading:**

**Assessment methods and criteria:**
The course is normally completed as group work, and the output is presented in a course seminar. The work follows the stages of Contextual Design method and the exercise assignments support the completion of the course work. Course work reports are presented and reviewed in a final seminar. In special circumstances the course can also be completed as individual work.

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Pasi Karppinen

---

**812305A: Information Systems in Organisations, 5 op**

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikko:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opintokohteen kiele:** Finnish

**ECTS Credits:**
5 ECTS credits / 133 hours of work.

**Language of instruction:**
finnish

**Timing:**
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 1st study year.

**Learning outcomes:**
After completing the course, the student: Is able to explain the importance of information systems in organizations, is able to define the conditions for the successful operation of the information in the organization, is able to explain the main features of the development of information systems.

**Contents:**
The basics issues of organization, structure, and operation, the basics of a digital organization, information types and roles of the organizations, interaction between information and organization, the role of information systems in the management of organizations and decision-making, formation of organizational knowledge and management, enterprise resource planning (ERP) systems, organizational reform of information systems and the economic importance of information systems.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 20h, independent study of the course literature, weekly tasks and scientific essay 110h.
Target group: BSc students.

Recommended or required reading:

Assessment methods and criteria:
Weekly tasks and scientific essay.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Seppo Pahnila

521150A: Introduction to Internet, 5 op

Voimassaolo: 01.08.2012 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Electrical Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Timo Koskela
Opintokohteen kielet: Finnish

ECTS Credits:
5

Language of instruction:
All materials are in English, lectures are given in Finnish.

Timing:
Spring, period 4.

Learning outcomes:
1. is able to explain the design principles, architecture, functionality and challenges of the public internet
2. understands data link layer's role and most important access network technologies
3. is able to explain the structure and most important protocols of the TCP/IP protocol stack
4. knows most important internet applications and their protocols
5. understands the principles of internet security and multimedia applications
6. is able to solve simple internet related problems
7. is able to program a small internet application

Contents:
Internet's design principles and architecture, data link layer and most important access network technologies, TCP/IP protocol stack and its most important protocols, most important Internet applications, principles of Internet security and multimedia, internet's challenges and Future Internet.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 32 h / problem solving exercises 14 h / laboratory exercises 12 h / course work 25 h / self-study 52 h.
Problem solving exercises, laboratory exercises and course work are completed as group work.

Target group:
Computer Science and Engineering students, Information Processing Science students, other students of the University of Oulu.

Prerequisites and co-requisites:
None.

Recommended optional programme components:
-

Recommended or required reading:
Announced at the beginning of the course.

Assessment methods and criteria:
The course uses continuous assessment so that there are 3 intermediate exams. Alternatively, the course can also be passed with a final exam. The course includes a mandatory course work.

Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
The course uses numerical grading scale 1-5.

**Person responsible:**
Dr. Timo Koskela.

811393A: Introduction to research work, 5 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Halonen, Raija Helena

**Opintokohteen kielet:** Finnish

**ECTS Credits:**
5 ECTS credits/133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

**Learning outcomes:**
After completing the course, the student is able to understand the role of research in the society and university, and he or she knows how the study carried out at the department is located in the discipline. The student can name the basic phases of research process and how they are related to each other. The student knows the importance of scientific publishing for the research; identifies different channels for publications; and can use at least two different ways to evaluate quality – the quality of the publication forum and the number of citations. The student understands scientific argumentation and its role in research; knows the parts of an argument; and can analyse simple arguments. The student knows the role of empirical material in research and knows some key means to collect and analyse research material. The student knows why certain methods are chosen. The student is able to seek articles from databases and use searches.

**Contents:**
Research in general, scientific argumentation, collecting and analysing empirical material, information search, understanding research process, scientific publishing.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 18 h, exercises 36h, independent work 80 h.

**Target group:**
BSc students.

**Recommended optional programme components:**
Tiedonhankintakurssi (030005P), Kirjallinen ja suullinen viestintä (900050Y), LuK-tutkielma (811383A)

**Recommended or required reading:**

**Assessment methods and criteria:**
Participation in lectures and exercises, and a written exercise.

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Raija Halonen

The course is held in the autumn semester, during period 1. It is recommended to complete the course in the 2nd autumn semester.
Learning outcomes:
After completing the course, the students know possibilities of UML-language family to describe different views. They can picture a task using Use cases and scenarios. Moreover they can produce detailed descriptions using activity-, class-, interaction- and state diagrams. They know principles of object-orientedness and can use abstract as well interface classes. Additionally they can model user interface by state diagrams. They understand what design patterns are and how they are described and categorised.
Contents:
Principles of object orientation and object-oriented programming; quality criteria of object orientation; design patterns; case use; activity, class, interaction and state machine diagrams; class realisation.
Mode of delivery:
Face-to-face teaching.
Learning activities and teaching methods:
Lectures 30h, compulsory exercises and assignments 28h, independent work 85 h.

Target group:
Bachelor students.
Prerequisites and co-requisites:
Course of elementary object-oriented programming is a compulsory prerequisite. Basic knowledge of object programming and information systems analysis and design are assumed.
Recommended or required reading:
Bennet, McRobb & Farmer: Object-oriented systems analysis and design, Using UML.

Assessment methods and criteria:
Examination. At least 50% on points needed for passing the course.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Juha Iisakka

812341A: Object-Oriented Programming, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Ilkka Räsänen
Opintokohteen kielet: Finnish
Leikkaavuudet:
ay812341A Object-oriented Programming (OPEN UNI) 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
finnish
Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course in the 1st study year.

Learning outcomes:
After completing the course, the student is able to explain the general objectives and techniques of object-oriented programming paradigm. Furthermore, the student can describe the practical meaning of concepts of object-oriented programming. The student can construct Java programs that apply inheritance, composition, and polymorphism.

Contents:
Introduction to object-orientation, Basics of programming in Java language, Composition, inheritance and polymorphism, Java collections and exception handling.

Mode of delivery:
Face-to-face teaching.
Learning activities and teaching methods:
Lectures 32h, laboratory exercises 21h, weekly assignments and independent work 82h.

Target group:
BSc students.
Prerequisites and co-requisites:
Course Introduction to Programming or similar knowledge.
Recommended or required reading:
Timothy Budd: Introduction to object-oriented programming, 3rd edition.
Bruce Eckel: Thinking in Java 3rd edition or later.
Assessment methods and criteria:
Weekly assignments (preferred) or final exam + programming assignment.

Grading:
Numerical scale 1-5 or fail.
Person responsible:
Ilkka Räsänen

811366A: Project Work, 10 op
Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Antti Siirtola
Opintokohteen kielet: Finnish
Leikkaavuudet:
811311A  Project Management Principles  3.0 op
811365A  Project I  7.0 op
811108P  Basics of Project Work and Management  3.0 op
811308A  Principles of Project Work  4.0 op

ECTS Credits:
10 ECTS credits / 267 hours of work.

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course in the 3rd spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to (*) tell about concepts and methods related to project work, (*) explain the prerequisites of a successful software project, (*) collect information and based on it, make project related decisions, (*) apply theory on project work and management in practice, (*) recognise risks of software projects and prepare for them, (*) work as a member of a project team, (*) communicate with stakeholders by using both written and spoken language and (*) apply his/her experience on design, implementation and testing to forthcoming software and/or academic research projects.

Contents:
Project as a working method, project planning, implementation of a project, concluding a project, practical work in a software or academic research project.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Info lecture 1h, lectures 20h, assignments 20h, practical project work 220h.

Target group:
BSc students.

Prerequisites and co-requisites:
The compulsory prerequisites are Introduction to Programming, Object-Oriented Programming (812347A), Advanced Object-Oriented Programming, Object-Oriented Analysis and Design (812346A), Data Structures and Algorithms (811312A), Introduction to Information Systems Design (811169P), Basics of Databases (811380A) and Software Engineering (811335A). The prerequisites do not apply to students who have already completed a Bachelor's degree, a higher degree or another equivalent degree. The recommended prerequisites are User Interface Programming (811375A) and Database systems (811384A).

Recommended optional programme components:
The recommended prerequisites are User Interface Programming (811375A) and Database systems (811384A).

Recommended or required reading:

Assessment methods and criteria:
The assessment of the course unit is based on the learning outcomes of the course unit. The student must complete all assignments and work toward the completion of the project tasks for the required amount of time. The more detailed assessment criteria are available on the Noppa page of the course unit.

Grading:
Pass/fail

Person responsible:
Antti Siirtola

Working life cooperation:
Yes, the students will work in projects ordered by customer organisations while simulating software development as authentically as possible in a real working environment.

**Other information:**
Enrollment by the end of November. Enrollment is binding. There will be a info lecture in December before the course starts.

**811391A: Requirements Engineering, 5 op**

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- ay811391A  Requirements Engineering (OPEN UNI)  5.0 op

**ECTS Credits:**
5 ECTS credits/133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 3rd autumn semester.

**Learning outcomes:**
After completing this course, the student can analyse the requirements from the problem-domain and solution-domain viewpoints, and understands the special issues associated with these viewpoints. The student can distinguish the roles of problem-domain and solution-domain requirements for the customer and developer; he/she is able to identify various project types and knows which requirement style fits best to each project type. The student will be familiar with various requirement definition styles together with their pros and cons, and is able to use some of the most important definition styles. Several requirements of elicitation techniques will be added to the student’s toolbox with the skills of mastering some of them. The principles of requirements management, validation and verification during the product life cycle will be familiar to the student at the end of this course.

**Contents:**

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 32h, weekly assignments and project assignment about 102h.

**Target group:**
BSc students

**Prerequisites and co-requisites:**
We assume the basic skills from the following courses: 811169P Introduction to Information System Design, 812346A Object-Oriented Analysis and Design, 811380A Basics of Databases, 811335A Software Engineering and 812334A Information Systems Planning.

**Recommended optional programme components:**

**Recommended or required reading:**

**Assessment methods and criteria:**
Two ways of passing: 1) Active participation: weekly assignments and project assignment (only for Finnish-speaking students); 2) Conventional exam

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Piaastiina Tikka

Working life cooperation:
No

815345A: Software Architectures, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Juustila, Antti Juhani
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits/133 hours of work

Language of instruction:
Finnish

Timing:
3 rd year, periods 3-4

Learning outcomes:
The goal of the course is to give the students an overview of the concepts and techniques related to software architectures. The focus of the architectural solutions is in the objec oriented systems, but the course addresses also generic architectural models and techniques supporting architectures. After the course, the student is able to identify and analyse different architectural solutions and understands the pros and cons of these, from the perspective of building and running software, as well as from the viewpoint of quality and maintainability. The student is able to describe architectural solutions and elements of these, as well as different interfaces, using the modeling techniques of UML. The student is able to create alternative architectural solutions based on functional and non-functional requirements, using different design methods and techniques of architectural design, as well as evaluate the solutions' fit to use. The student is able to differentiate the design of product and product family architectures from the design of more usual software architectures.

Contents:

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 24 h, exercises 20 h, exercise work as group work 90 h.

Target group:
BSc students.

Prerequisites and co-requisites:
The knowledge of the software development process in general, the basics of UML in modelling, introductory experience in object oriented programming (e.g. courses 811335A 34 of 104 15.08.2016 11:37 Ohjelmistotekniikka, 812346A Oliosuuntautunut analyysi ja suunnittelu, 812347A Olio-ohjelmointi). Recommended previous course is the Olio-ohjelmoinnin jatkokurssi.

Recommended optional programme components:
Advanced Object-oriented Programming is a recommended prerequisite.

**Recommended or required reading:**

**Assessment methods and criteria:**
The evaluation of the course is based on the learning outcomes of the course. The course is passed by participating in the course assignments as well as by evaluation of the exercise work. Detailed evaluation principles are announced in the Noppa page of the course.

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Antti Juustila

**Working life cooperation:**
No

**Other information:**
Course is potentially implemented in cooperation with the Tampere university of technology.

---

**811346A: Software Engineering, 5 op**

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Lappalainen, Jouni Esko Antero

**Opintokohteen kielet:** Finnish

**ECTS Credits:**
5 ECTS credits / 133 hours of work.

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 2nd study year.

**Learning outcomes:**
After completing the course, a student is able to explain various aspects of software engineering areas such as process models, requirement specification, analysis and design methods, quality management and project management, their importance and know how to use them for small-scale task solving. A student is familiar with software engineering practices and activities (review, testing, software product management, risk management, project management) and knows how to use them in software development at different levels. A student can explain the maintenance and redesign of software evolution and its importance.

**Contents:**
Software process, software requirements, software design methods, software engineering practices, software quality management, software project management.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Implementation methods of the course vary: a) Lectures 32h, exercises 24h, study group working 40h, and self-study 24h; b) Lectures 32h, exercises 24h, essay 64h, and self-study 24h (Lectures in Finnish, exercises can be completed also in English).

**Target group:**
BSc students.

**Prerequisites and co-requisites:**
Course “Introduction to Information Systems Design” and “Object Oriented Analysis and Design” or similar knowledge.
Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
Essay and assignment, or study group work and assignment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Jouni Lappalainen

811375A: User Interface Programming, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Lappalainen, Jouni Esko Antero
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits/133 hours of work

Language of instruction:
Finnish
Timing:
3rd year, autumn semester, periods 1 + 2

Learning outcomes:
After completing the course, the student can implement a software application that utilises a database for storage and has a graphical user interface. The GUI (as well as the entire application) must be developed by implementing usability design principles from the beginning of the development process.

Contents:
The course deals with the following: UI elements, foundations of the Swing library, UI design principles, layout managers, MVC-paradigm, event-driven programming, web-usability, JSP, programmatically utilising databases, JDBC, web-programming.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Exercise 33h, coursework 75h, independent study 26h.

Target group:
BSc students

Prerequisites and co-requisites:
Knowledge and skills of the course “811380A Basics of Databases” and fundamentals of user interface design. In addition, the knowledge and skills of object-oriented programming are needed.

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
The student must submit coursework that fulfils the given requirements (defined during the course). Read more about assessment criteria at the University of Oulu webpage.

Grading:
Numerical scale 1-5 or fail.
030005P: Information Skills, 1 op

Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Faculty of Technology
Arvostelu: 1 - 5, pass, fail
Opettajat: Ursula Heinikoski, Sassali, Jani Henrik
Opintokohteen kielet: Finnish
Leikkaavuudet: 030004P Introduction to Information Retrieval 0.0 op

ECTS Credits:
1 ECTS credit

Language of instruction:
Finnish

Timing:
2nd or 3rd year

Learning outcomes:
Students know the different phases of information retrieval process and basic techniques of scientific information retrieval. They will find the most important reference databases of their discipline and know how to evaluate information sources and retrieval results.

Contents:
Retrieval of scientific information, the retrieval process, key databases of the discipline, and evaluation of information retrieval and information sources.

Mode of delivery:
Blended teaching: classroom training, web-based learning material and exercises in Optima environment, a final assignment on a topic of the student’s own choice

Learning activities and teaching methods:
Training sessions 8h, group working 7h, self-study 12h

Target group:
Compulsory for all students of the Faculty of Technology, the Faculty of Information Technology and Electrical Engineering and the Faculty of Architecture. In the Faculty of Science compulsory for students of biology, physics, geosciences, chemistry and geography. Optional for students of biochemistry and mathematics.

Prerequisites and co-requisites:

Recommended optional programme components:
-

Recommended or required reading:

Assessment methods and criteria:
Passing the course requires participation in the training sessions and successful completion of the course assignments.

Grading:
pass/fail

Person responsible:
Science and Technology Library Tellus, tellustieto (at) oulu.fi

Working life cooperation:
-

Other information:
-

813613S: Master's Thesis, 30 op
**ECTS Credits:**
30 ECTS credits/800 hours of work.

**Language of instruction:**
Finnish/English.

**Timing:**
Timing is free; execution can be allocated over several semesters. Obligatory for Master’s degree. During 1st and 2nd year of Master’s studies.

**Learning outcomes:**
After completing the thesis the student can:

- Define a relevant focused problem in the field of information processing science;
- Apply a scientific method as a tool in solving the stated research problem;
- Synthesise research results and evaluate their validity;
- Write a scientific thesis based on the accomplished research according to the department’s guidelines;
- Participate in the evolution of ICT and postgraduate studies after completing the thesis.

**Mode of delivery:**
Face-to-face meetings and electronic communication with the supervisor.

**Learning activities and teaching methods:**
Conducting and reporting research under supervision of personal advisor.

**Prerequisites and co-requisites:**
The research plan and the final draft of the thesis will be presented in the “Master’s Thesis Seminar” (813602S).

**Assessment methods and criteria:**
Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
The supervisor and a second independent reviewer will evaluate the thesis using the scale 1–5.

**Person responsible:**
Kari Kuutti

**Working life cooperation:**
Especially empirical Master’s theses are often done in cooperation with private or public sector.

**813627S: Master’s Thesis Seminar, 2 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Information Processing Science DP
**Arvostelu:** 1 - 5, pass, fail

**Opintokohteen kielet:** English

**Required proficiency level:**

**ECTS Credits:**
Language of instruction:
Finnish / English

Timing:
The course is held throughout the study year, in all periods.

Learning outcomes:
By completing this course the students can plan a scientific study, is capable of presenting own research plan and final draft of own Master’s thesis, and understands the approach the reviewers use to evaluate the thesis.

Contents:
See “assessment methods”.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Planning and presenting the student’s own research. Listening to peers’ research plans and research reports.

Target group:
MSc students

Recommended optional programme components:
813613S Master’s Thesis course.

Recommended or required reading:
Guidelines to producing a Master’s thesis.

Assessment methods and criteria:
Active participation in at least seven seminar sessions. One session lasts about 2 hours and they are arranged during the semesters according to the plan published on the website. The students will present their own research plan and the research before official evaluation. During the presentation the research will be discussed critically by an opponent.

Grading:
Pass or fail.

Person responsible:
Jouni Similä

Working life cooperation:

813607S: Maturity test, 0 op

Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

817609S: Project Seminar, 3 op

Voimassaolo: 01.08.2013 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Tonja Molin-Juustila
Opintokohteen kielet: English
ECTS Credits:
3 ECTS credits / 80 hours of work.

Language of instruction:
English.

Timing:
The timing of the course is dependent on the “Research and Development Project (817612S)” course and will
immediately follow the project in
the next semester. It is recommended to complete the course at the 2nd spring semester, period 3.

Learning outcomes:
After completing the course, the students should demonstrate their abilities to work as academic experts in
challenging ICT projects. Students will learn to acquire and apply research articles and other new knowledge like an
academic expert in a selected topic of their project ("Research and Development Project" course). Students will also
learn to analyse and report their experience-based new knowledge on the topic to peer students. By completing this
course, students are able to act as reflective, independent academic experts in ICT projects and have learnt
expertise in some topic area of their project. As an expert in the selected topic area, the student is able to: search
research articles and literature on the topic (review); report practical experiences gained during the project on the
topic; evaluate the results of the project and reflect the practical experiences against previous literature and research
on the topic; disseminate the (increased) expertise in the topic in a credible
way to peers both by a written report and orally.

Contents:
Starting lecture, independent analysis and reporting of the expertise on the selected project topic and an expert
seminar (1-2 days) with the presentations of each topic.

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Attendance at the starting lecture (4h) and the expert seminar (1-2 full days) is mandatory. Independently writing the
seminar paper and
preparing the seminar presentation (n. 50h).

Target group:
MSc students.

Prerequisites and co-requisites:
Mandatory: Research and Development Project (817612S) during autumn semester, periods 1&2. This course will
immediately follow the project
course on the project topics. For the students of the Master’s degree programme on Software, Systems, and Service
Development (GS3D), Software Factory Project Course (817611S) is mandatory before this course.

Recommended or required reading:
Research articles and materials are to be independently collected and studied by the students.

Assessment methods and criteria:
Expertise in the topic area will be reported on the seminar paper. Seminar presentation will also be evaluated.
Assessment criteria in detail will be
given at the starting lecture and in the web-based learning environment of the course.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Tonja Molin-Juustila

Working life cooperation:
No

813621S: Research Methods, 5 op

Opiskelumuoto: Advanced Studies

Laji: Course

Vastuuysikkö: Information Processing Science DP

Arvostelu: 1 - 5, pass, fail

Opettajat: Arto Lanamäki

Opintokohteen kielet: English

Leikkaavuudet:

521146S Research Methods in Computer Science 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
Having completed the course, the student is able to explain the general principles of scientific research and the practices of scientific methodology. The student is also able to generate research problems in information systems and software engineering. The student is able to identify and describe the main research approaches and methods in information systems and software engineering and choose the appropriate approach and method for a research problem. The student is also able to evaluate the methodological quality of a research publication. After the course the student is able to choose and apply the proper approach and method for his or her Master's thesis and find more information on the method from scientific literature.

Contents:
Introduction to general scientific principles, scientific research practices and quality of scientific publications, qualitative research approaches and selected research methods, quantitative research approaches and selected research methods, design science research and selected methods, requirements and examples of Master’s theses, evaluation of research.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40h, exercises 30h and individual work 65h. Learning diary is written about the lectures and exercises. Exercises include group work.

Target group:
MSc students

Prerequisites and co-requisites:
Completion of Bachelor’s studies

Recommended optional programme components:

Recommended or required reading:
Lecture slides and specified literature

Assessment methods and criteria:
Accepted learning diary.
Grading:
Pass or fail.

817612S: Research and Development Project, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Tonja Molin-Juustila
Opintokohteen kielet: English

ECTS Credits:
10 ECTS credits / 260 hours of work.
Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 2nd autumn semester.

Learning outcomes:
After completing the course, the students should demonstrate their abilities to work on a challenging ICT project. Students will learn to acquire and apply professional expertise in the topic of the project. Students will also demonstrate their skills to conduct an ICT project in a professional way. By completing this course, students are able to act as independent professional members of an ICT project and have advanced professionalism in project work and management. The topics for the course can be anything from the ICT field. As a professional expert conducting a successful project in a managed way, the student is able to: collectively produce, monitor and update the plan of the project (project with fixed time and human resources); search up to date information on the subject matter of the project in order to build professional expertise on the topic and apply this in the project work; build professional working knowledge and skills focused in the subject area of the project (e.g. software development, user experience evaluation); develop analytical and creative skills for successful completion of the project; monitor and communicate the status (time & human resources used) of the project in real time within the project team (weekly/daily meetings); use systematic means (e.g. ICT tools) to enable communication and transparency of the project work; develop skills to communicate with the customer in a professional context; manage a successful project review with the steering group/project team organization; report and explain the status (progress, results and future estimations of the project) to the steering group to support the decision making and problem resolution concerning the project's future; work as responsible project team member; as an expert and/or project manager; work as a project team member with people from different technical and/or cultural backgrounds; produce a realistic outcome in relation to the project time and human resources (ok, good, excellent); reflect the relationship between the process model(s) selected for the project (waterfall, evolutionary, agile etc.) and the management practices followed in the project. Management practices followed in the project.

Contents:
Starting lecture, where the steps of carrying out the course will be described together with other important information. Allocation of the project teams will immediately follow the starting lecture. The project work will take two periods (one semester).

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Project work 260h per student. Working hours reported during the project. Attendance at the starting lecture (4h) is mandatory. Preparing a project portfolio in the end (3h).

Target group:
Master's level students.

Prerequisites and co-requisites:
Mandatory: B.Sc. degree or other equivalent degree. Students enrolling directly to the Master's programme should take the “Preparatory course for MSc studies (811392A)” course first (see the timetable for the autumn semester, period 1) or otherwise master the basics of project work and management as in Pressman, R.S. Software Engineering: A Practitioner’s Approach, the chapters related to project management. The expertise gained during this project course will be further elaborated during the “Project Seminar (817609S)” course, which will immediately follow this course during spring semester, period 3.

Recommended or required reading:
Unique project material provided by the customer of the project and/or material to be collected and studied by the project team.

Assessment methods and criteria:
Skills will be reported by a project portfolio. Detailed assessment criteria will be given at the starting lecture and they will also be available in the web-based learning environment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Tonja Molin-Juustila

Working life cooperation:
Yes. Learning by doing, i.e. managing authentic, resource-limited project work and integrating the practices of an academic expert into the unique project assignment.

Other information:
Enrollment for the course is well beforehand, i.e. until the end of July between 1st and 2nd study year.
815303A: Embedded Software Development Environments, 5 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Juustila, Antti Juhani

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Timing:**
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 1st spring semester.

**Learning outcomes:**
After completing the course, a student is able to work with the essential software development tools of a selected embedded platform. The student is able to implement memory and power efficient applications by exploiting existing libraries and knowledge of the programming interfaces provided by the platform.

**Contents:**
The focus of the course is in the software development environments and tools for mobile and embedded platforms, such as Android, iOS, and Windows Phone. In addition, the course covers memory and power management, core services of the platform, and the utilisation of existing libraries. One platform will be selected for deeper study, and the course introduces its essential software development tools and libraries. The emphasis is on application development for the platform as an exercise.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures and exercises about 40 h, exercises and exercise work 93 h

**Target group:**
MSc students

**Prerequisites and co-requisites:**
Course “815309A Real-time Distributed Software Development”, C/C++ and/or Java programming skills or similar knowledge obtained from other courses.

**Recommended or required reading:**
Course material, the documentation of selected technologies, and other related literature

**Assessment methods and criteria:**
Exercise work

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Antti Juustila

815657S: Open Source Software Development, 5 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Henrik Hedberg

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
English
Timing:
The course is held in the autumn semester, during periods 1 and 2.

Learning outcomes:
After passing the course, a student will be able to

- define the historical background and the ideology of Open Source Software (OSS),
- participate in OSS development project,
- evaluate the impact of the usage of OSS and OSS licenses on software development and exploitation, and
- view the phenomenon through the essential scientific research.

Contents:
The course introduces OSS development paradigm and current topics in OSS research. OSS affects both the way to produce software and the decisions of user organizations. It can be understood, for example, from different social, legal, economical, software engineering and data security viewpoints. The aim is to study from different perspectives, for example, what OSS is and what it is not, the history and organisation of OSS projects, methods of OSS development and usage, as well as licensing models and possible risks. The emphasis is on research work.

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Lectures and seminars about 40 h, exercises and peer reviews about 20 h, seminar article and presentation about 70 h

Target group:
MSc students

Prerequisites and co-requisites:
Compulsory prerequisites are Bachelor degree or other equivalent degree and basic knowledge on software engineering and research work. The course allows passing Project following the OSS development principles, or writing Master's thesis on a OSS topic.

Recommended or required reading:

Assessment methods and criteria:
Active participation, seminar article and other assignments

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Henrik Hedberg

815305A: Real Time Distributed Software Development, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettaja: Petri Pulli
Opintokohteen kiele: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After completing the course, the student:

- is able to analyse the characteristics of real-time distributed systems;
• Is able to acquire an object-oriented, model-based approach to solve the design problems found in real-time systems;
• Is able to detect and derive specific problems facing the real-time software designer, and to suggest design patterns to solve those problems.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 40h, design exercises 15h, student project 80h.

Target group:
MSc students

Prerequisites and co-requisites:
Computer architecture, object-oriented analysis and design (UML), programming language C and/or Java.

Recommended or required reading:

Assessment methods and criteria:
Exam and project evaluation

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Petri Pulli

817602S: Software Development in Global Environment, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After completing the course, the student

• Can define the key success factors of Global Software Design (GSD) and the potential problems in coordination of projects where teams are separated by physical and/or temporal distance;
• Can define and evaluate the collaborative technologies, which in the best way support distributed software development;
• Can choose the methods and tools for distributed software development;
• Can apply the practices of GSD in a student project and use the supporting tools throughout the project life cycle.

Contents:
Some of the topics covered are strategic issues in distributed development (off-shoring, near-shoring, outsourcing, OSS); cost-benefit-risk analysis; the triad of coordination, control and communication; team building (e.g. virtual teams); software process paradigms in the global environment (planned, agile); methods and tools for distributed software development; issues related to allocation of tasks; communication issues that arise due to distance and time zone differences; infrastructure support; geographical dispersion; lack of information communication; coordination complexity; cultural issues; technical issues related to information and artefact sharing; architectural design; and finally knowledge management issues. The lectures and seminars also review current research aspects of the GSD and related case studies from industry. The exercises demonstrate distributed software development as a virtual team with the support of appropriate methods and tools.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures and seminars involving all the students as well as lecture assignments (reading articles and writing analyses) 70h (20h lecture attendances, 30h lecture assignments, 20h additional reading), and exercises 65h. For lecture assignments each student will read, summarize and analyse selected academic articles. The exercises include laboratory demonstrations of different supporting tools for distributed software development. The students train in project software development and planning practices in a distributed environment. The student project groups are organised into virtual (distributed) teams of 4 students.

**Target group:**
MSc students.

**Prerequisites and co-requisites:**
Basic knowledge of academic writing technique is needed. Basic understanding of software business is an advantage.

**Recommended or required reading:**
To be announced during the course implementation.

**Assessment methods and criteria:**
By active participation or alternatively exam, based on the course study materials.

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Jouni Similä

**Working life cooperation:**
No

**Other information:**
Participation: The course is obligatory for GS 3D students and software engineering students; the total number of students is limited according to the departmental selection rule (valintasääntö, kts. Opinto-opas). 80% attendance is required. Web page: [https://noppa.oulu.fi/noppa/kurssi/817602s/etusivu](https://noppa.oulu.fi/noppa/kurssi/817602s/etusivu)

815662S: Software Engineering Management, Measurement and Improvement, 5 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Oivo, Markku Tapani

**Opintokokeen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work.

**Timing:**
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 2nd autumn semester.
Learning outcomes:
After completing the course the student understands the fundamental principles of software processes and their
development in professional
software engineering. The course extends the quality understanding based on individual techniques (e.g. reviews) so
that after completing
the course the student is able to: - Evaluate different methods and techniques; - Select from them appropriate ones
for different software
engineering environments; - Have capabilities to participate in systematic efforts for improvement in software
companies.

Contents:
The course covers the most fundamental process centred software quality improvement and management
approaches, methods and latest research results, as well as approaches to software measurement. The topics of the
course include: traditional waterfall, agile (extreme programming, scrum, rational unified process, crystal, feature
driven development, adaptive software development, dynamic systems development method) and lean methods,
process improvement approaches, software process and product measurement, agile and lean practices, process
improvement at the enterprise level and practical examples from software industry.

Target group:
MSc students

Prerequisites and co-requisites:
B.Sc. or other equivalent degree and basic knowledge of software engineering

Recommended or required reading:
- CMMI: Guidelines for Process Integration and Product Improvement. Mary Beth Chrissis, Mike Konrad, Sandy
- Dingsøyr T., Dybå T., Moe N.B., Agile Software Development: Current Research and Future Directions,
  Springer, 2010
  Osborne Media, 2008.
- Craig Larman and Bas Vodde, Scaling Lean & Agile Development: Thinking and Organizational Tools for
  Large-Scale Scrum, Addison-Wesley, 2009

Assessment methods and criteria:
Active and regular participation to lectures and seminars AND report evaluation AND seminar presentations

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Markku Oivo

815663S: Software Engineering Research, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumoto: Advanced Studies
Laji: Course
Vastuuyksikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the
2nd autumn semester.

Learning outcomes:
After completing the course the student will know the current research areas in software engineering and the most
important software engineering research methods. The student understands academic research and publishing in
software engineering, and is able to critically analyse scientific articles from the viewpoint of the content and research
methods used in the article. The student is able to present academic research and actively participate in an academic
discussion of research papers and research results.
Contents:
State of the art research methods and topics in software engineering.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and seminars 28h, exercises/ assignments 78h, weekly study 42h.

Target group:
MSc students

Prerequisites and co-requisites:
B.Sc. or other equivalent degree

Recommended or required reading:

Assessment methods and criteria:
Active Participation to lectures and attendance. Final grade is composed of attendance, assignments and term paper. No remote participation or distance learning.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Burak Turhan

Other information:
It is not possible to complete the course remotely or with self-study options.

815312A: Software Production and Maintenance, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies

Laji: Course

Vastuuysikkö: Information Processing Science DP

Arvostelu: 1 - 5, pass, fail

Opettajat: Mika Mäntylä

Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits/133 hours of work

Timing:
The course is held in the spring semester, during period 3. It is recommended to complete the course in the 1st spring semester.

Learning outcomes:
After completing the course, the student:

- Can apply the framework of product line engineering in large scale software production;
- Can apply the maintenance process and techniques in software production.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24h, exercises/ assignments 18h, weekly study and learning diary 42h, term project 45h.

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge of software engineering and software architectures.

Recommended or required reading:
Assessment methods and criteria:
Active Participation to lectures and attendance. Final grade is composed of attendance, learning diary, assignments and term project.

Grading:
Numerical scale 1-5 or fail.

Leikkaavuudet:
ay815311A Software Quality and Testing (OPEN UNI) 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
The student understands different views on software quality and the role of testing as a part of software engineering validation and verification activities, and defect identification/removal techniques. The student knows testing levels, strategies and techniques, can create test cases and conduct unit testing with appropriate testing tools. The student knows the basics of test driven development and test automation.

Contents:
Software quality and quality assurance. Software quality management and metrics. Fundamental concepts of software testing. Functional and structural testing. Unit, integration, system, acceptance and regression testing. Hands on test-driven development. Test automation

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24 h, exercises/ assignments 24 h, weekly study 42 h, term project 42 h

Target group:
MSc students

Prerequisites and co-requisites:
Working knowledge of Java programming language is required. Basic knowledge of software engineering.

Recommended optional programme components:

Recommended or required reading:

813626S: Emerging Technologies and Issues, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Piiaistiina Tikka
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course at the 1st autumn semester.

Learning outcomes:
After completing the course, the student is able to:

- Analyse the on-going changes in online and consumer behaviour, customer requirements, ICT markets and technological development;
- Evaluate key enabling web technologies and become an effective participant in web-enabled business endeavours and initiatives;
- Design ways for leveraging information and communication technologies to improve intra- and inter-organisational processes and enhance a firm’s competitive position;
- Plan ways for searching innovations; and
- Develop his/her skills for building careers and taking advantage of entrepreneurial opportunities through emerging technologies, in particular related to the web.

Contents:
1. A shift in thinking about the web and emerging technologies
2. How to social web is transforming businesses, software design, our perception of people as well as skills required of us
3. How to accelerate innovation creation through web-based and other emerging technologies: Ecosystem thinking, strategies, core business values
4. Transformation of the social web into humanized web

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24h, exercises 8h, reflective personal exercises 19h, independent work and exam (required reading) 83h.

Target group:
MSc students

Prerequisites and co-requisites:
None

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
Exam.

Grading:
Numerical scale 1-5 or fail.

**812351A: Enterprise Systems, 5 op**

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Li Zhao

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work.

**Language of instruction:**
English

**Timing:**
The course is held in the spring semester, during period 3. It is a recommended to complete the course at the 1st autumn semester.

**Learning outcomes:**
After completing the course, the student understands Enterprise Resource Planning (ERP), Supply Chain Management (SCM), Inventory Management, CRM, Knowledge Management, Online Business systems, Marketing systems, etc., and also understands the intellectual capital and organizational competitive advantage. The student should be able to describe how processes integrate the internal functions of the firm and allow the firm to interact with its environment, and be able to recognize, model, and improve processes to help the firm achieve efficiency and effectiveness.

**Contents:**
1. Principles of enterprise systems, and business processes that integrate the internal functions of the enterprise and connect the enterprise with its business environment;
2. Manage enterprises’ intellectual capital to achieve competitive advantage;
3. Enterprise resource planning (ERP);
4. Supply chain management (SCM);
5. Global supply chain & inventory management systems
6. Knowledge management systems;
7. Customer relationship management (CRM);
8. Internet-based Business and Marketing Systems;
9. Enterprise application integration (EAI)

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 20h, exercises 18h, homework 25h, essays 35 h, examination 36h.

**Target group:**
MSc students

**Prerequisites and co-requisites:**
Understanding of the business process modeling helps.

**Recommended optional programme components:**

**Recommended or required reading:**
Refer to the course webpages

**Assessment methods and criteria:**
Exercises, assignments, essay, and examination.

Grading:
Numerical scale 1-5 or fail.

817604S: ICT and Organizational Change, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:
After completing the course the student is able to distinguish various roles of information and communication technology (ICT) in change of organization and its context, and be able to analyze the role of ICT in relation with change taking place in an organization.

Contents:
The course studies organisations at four levels: individuals, practices, organizational structures and transformations, and the societal context of organisations. The organizational role of ICT and the relation between ICT and knowledge are also discussed. A method for analysing organisations as networks of activity systems is presented. The role of power, trust and control in the change process is discussed. The different aspects of change agents are presented and analysed.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Introductory lectures 20h, seminar sessions 14h, individual work 100h (for a review and analysis of selected course materials and making a presentation for the seminar).

Prerequisites and co-requisites:
Recommended to take Emerging Technologies and Issues before this course.

Recommended optional programme components:

Recommended or required reading:
A list of research articles will be provided for the lectures and assignments. Readings for the background and theoretical framework are:

Assessment methods and criteria:
Lecture and seminar participation, assignment (literature review, analysis, seminar presentation). Alternatively by examination and personal assignment report.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Minna Isomursu

812349A: IT Infrastructure, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Petri Pulli, Aryan Firouzian
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
English

Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 1st spring semester.

Learning outcomes:
After completing the course, students are able to judge, compare and apply data communications concepts and computing solutions to various situations encountered in industry; identify general concepts and techniques of data communications in different organizational environment; Explain core elements of IT infrastructure, principles underlying layered system architectures and the technology of the Internet; identify the most important server and storage architectures and the main mechanisms for providing high-capacity processing and storage capacity; Understand the principles of service virtualization, and concepts of IP networks and protocols; Explain structure of large-scale organizational IT infrastructure, and role of IT service management as organizational IT infrastructure solution; Understand opportunities for virtual computing service and configure IT infrastructure and security solution for small organization.
The course aims to enable effective communication with technical, operational, managerial and service provider communities through improvement in technical knowledge and terminology. The course provides IT consultants with capabilities to make intelligent decisions regarding computing platform and service architectures by considering organizational flexibility.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h, Student project guidance sessions 6h, student project work 85 h and examination 16 h

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge on computer, network and Internet architecture.

Recommended optional programme components:

Recommended or required reading:
Lecture notes, scientific articles.

Assessment methods and criteria:
813623S: Information Security Policy and Management in Organisations, 5 op

Voimassaolo: 01.08.1950 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Li Zhao
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.
Language of instruction:
English
Timing:
The course is held in the autumn semester, during period 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:
After completing the course, the student is able to: • Develop BCP (Business Continuity Planning); • Develop organisation specific information security policies and sub-policy systems in organisations; • Improve employees’ compliance with the information security procedures through training, campaigning and other measures; • Carry out risk management in practice; • Estimate the economical investment in information security; • Understand the strengths and weaknesses of information security management standards; • Understand the certifications in the area of information security management; • Understand the security risks related to cloud computing and Internet of Things; • Design information security policies at organisations.

Contents:
1. BCP;
2. Development of organisation specific information security policies and sub-policy systems at organisations;
3. Measuring employees’ compliance with information security policies;
4. Improving employees’ compliance with the information security procedures through training, campaigning and other means;
5. Information security risk management in practice, estimation of economical investment in information security;
6. Information security management standards;
7. Certifications related to information security.

Mode of delivery:
Face-to-face teaching

Target group:
MSc students

Prerequisites and co-requisites:
Bachelor degree or other equivalent degree and course "811168P Introduction to Information Security" or principles of information security, or similar knowledge obtained from other courses.

Recommended optional programme components:

Recommended or required reading:
Raggad, Bel G.: Information security management, Concepts and practice, CRC Press 2010, Chapters 1, 2.7. – 2.13, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13, and 15

Assessment methods and criteria:
Examination.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Li Zhao
813625S: Information Systems Theory, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies

Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.
Language of instruction:
English
Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:
After completing the course, students will have a good knowledge and understanding of a broad array of research topics and themes within the field of information systems; will have good knowledge and understanding of information systems research and the process by which that research is produced; will have competence in critiquing research articles published in some of the leading academic journals and conference proceedings; will have competence in critical thinking, and analysis and synthesis of academic sources; will have competence in verbally presenting arguments in an academic fashion; will know how to write a literature review on an information systems research topic.

Contents:
Information Systems Research Overview, A contemporary selection of Information Systems research themes.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24 h, seminars 10 h, individual and group assignments 100 h; or self-study: opening lecture 2 h, assignments 132 h.

Target group:
MSc students
Prerequisites and co-requisites:
Bachelor’s degree or similar, Research Methods course. Recommended to take before Master’s Thesis.

Recommended optional programme components:

Recommended or required reading:
Selection of scientific articles.
Assessment methods and criteria:
Accepted assignments
Grading:
Numerical scale 1-5 or fail
Person responsible:
Netta Iivari
Working life cooperation:
No
Other information:
Course material can be found at OPTIMA e-learning environment, Urkund is used for course work submissions.

812331A: Interaction Design, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Netta Iivari
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits/133 hours of work

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course at the 1st autumn semester.

Learning outcomes:
Objective: The course explains the role of human interaction with IT products, systems, and services, explains the factors and problems related to it to motivate interaction design, and teaches some user-centered methods for analysis, evaluation and design of interactions.
Learning Outcomes: After completing the course, the student can assess the role of human interaction with IT products, systems, and services and identify factors and problems related to it within a practical design case. The student is able to:
- use methods for analysis and evaluation of existing interfaces;
- understand the role of requirements, plan and conduct a simple requirements collection and analysis;
- use basic principles of usability and user experience for user interface design;
- use interaction design methods in designing for target user experiences.

Contents:
The course provides an overview of interaction design, introducing the terminology and fundamental concepts, the main activities, and the importance of user involvement in the design process. The course addresses establishing requirements for IT products, systems, and services. The focus is on usability and user experience from the viewpoint of the intended users, their tasks and the context of use. The course covers user-centered methods for designing for and evaluating usability and user experience of IT products, systems, and services. All the main activities of interaction design are carried out in a practical design case.

Mode of delivery:
Face-to-face teaching, self-study

Learning activities and teaching methods:
Lectures 20 h, exercises and seminar 25 h, individual and group assignments 90 h; or self-study: an opening lecture 2 h, one larger assignment 110 h and individual tasks 21 h.

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge on human-computer interaction with usability and user-centered design.

Recommended or required reading:
Sharp et al. (2007) Interaction Design, chapters 1-2, 4-5, 7-13 (pages 1-88, 134-215, 290-643) OR more recent version in electronic format NEEDS TO BE DISCUSSED WITH LIBRARY.

Assessment methods and criteria:
Accepted assignments.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Netta Iivari

Working life cooperation:
No

Other information:
The course book will be available in electronic format that would be very useful, as the book is updated regularly and we are using a very old version.

817603S: System Design Methods for Information Systems, 5 op

Voimassaolo: 01.08.2011 -
Learning outcomes:
After the course the student understands the complexity of business, organizational, technical, and human aspects that affect ISD and the selection of methods in ISD. The student also understands the defects of traditional waterfall model and how other methods aim to answer to these defects and to other challenges in ISD. In particular, with socio-technical methods (e.g., SSM, ETHICS) and their techniques the student is able to re-plan and develop the sub-systems (automated and non-automated) of organization into a coherent whole and to take into account job satisfaction issues in addition to efficiency demands in ISD and in planning workflows in organization. The student is also able to assess and give arguments which method is suitable for an ISD project in an organization.

Contents:
After the course, the student understands the complexity of business, organizational, technical, and human aspects that affect ISD and the selection of methods in ISD. The student also understands the defects of traditional waterfall model and how other methods aim to answer to the defects of it and also answer to other challenges in ISD. In particular, with socio-technical methods (e.g., SSM, ETHICS) and their techniques, students are able to re-plan and develop the sub-systems (automated and non-automated) of organization into a coherent whole and to take into account job satisfaction issues in addition to efficiency demands in ISD and in planning workflows in organization. 812649S: Advanced Research Methods, 5 op

Voimassaolo: 01.08.2016 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Faculty of Information Technology and Electrical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Netta Iivari
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 1st spring semester of the master's studies.

Learning outcomes:
Having completed the course, the student understands the background, philosophical assumptions and guiding principles of quantitative, qualitative and design science research, their role in information systems and software engineering research and the variety involved in them. The student can evaluate the strengths and weaknesses of the research approaches and methods in relation to her or his research topic as well as select the suitable approach and methods. The student is familiar with and able to use more advanced data analysis methods. The student can prepare a research plan for a research project, including formulating research problems, specifying research designs and choosing appropriate data collection and analysis methods for solving the problems. The student is familiar with state-of-the-art ways of reporting the results as well as able to evaluate the methodological quality of her or his research and research publications more generally. The student is able to search more information on research methods from scientific literature as well as to adapt and refine methods for her or his research problems and interests.

Contents:
Introduction to qualitative, quantitative and design science research in information systems and software engineering, their scientific background, philosophical assumptions and guiding principles, variety involved in them, relationships between the research approaches and associated frameworks, methods, processes and practices, advanced data analysis methods, reporting and evaluating research within the approaches.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 16h, exercises 12h, seminar 7h, individual and group assignments 100h.

Prerequisites and co-requisites:
Research methods course, basic knowledge about research methods, preliminary thesis topic. Recommended to take before Master's thesis.

Recommended or required reading:
Selected scientific articles or research method books.

Assessment methods and criteria:
Assignments

Grading:
Pass or fail

Person responsible:
Netta Iivari

812650S: Advanced Topics in Human-Centred Design, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mikko Rajanen
Opintokohteen kielet: English
ECTS Credits:
5 ECTS credits/135 hours of work

Language of instruction:
English

Timing:
1st – 2nd year of Master’s studies, spring semester, period 3

Learning outcomes:
After completing the course, students are familiar with some state-of-the-art research results related to current themes and contexts in human-centred design, they understand the strengths and limitations of various methods and frameworks used in human-centred design and they can acquire knowledge and critically read relevant research articles on human-centred design research topics.

Contents:
The content of the course will change with time. The initial set of topics includes:
- Current themes
  - User experience as an object of analysis and design
  - Participatory design, end-user-design and living labs
  - Information ecologies and infrastructures
  - Design for all
  - Iterative and incremental design and development
  - The impact of human-centred design
- Current development contexts:
  - Open source software development
  - Game development
  - Development of ICT for children
  - Ubiquitous computing

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 20h, assignments 100h, seminars 15h

Target group:
Prerequisites and co-requisites:
Course “812335A Interaction Design” or similar knowledge.

Recommended optional programme components:

Recommended or required reading:
A collection of research papers supported with lecture materials. Students also need to collect some study material by themselves.

Assessment methods and criteria:
Depending on the implementation group and/or individual assignments, evaluated according to predefined evaluation criteria.
Read more about assessment criteria at the University of Oulu webpage.

811600S: Emerging Trends in Software Engineering, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mika Mäntylä
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits /133 hours of student work

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1.

Learning outcomes:
After completing the course, a student understands the recent trends in software engineering. The student is able to argue and discuss the significance of the trends to one’s own work and to software engineering discipline in general. The student is able to perform trend mining to discover new trends.

Contents:
- Software engineering trends (varies yearly) -
- Trend mining - Writing, arguing and discussing about the trends

Mode of delivery:
Face-to-Face teaching.

Learning activities and teaching methods:
Lectures 24h, exercises 18h, essays 30h, project 30h, independent study 30h.

Target group:
MSc students

Prerequisites and co-requisites:
Basics on software engineering

Recommended optional programme components:
No

Recommended or required reading:
Articles + lectures.

Assessment methods and criteria:
Active lecture participation, exercises, assignments, essays.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Mika Mäntylä

No

811601S: Emerging Trends in Software Testing, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuukysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mika Mäntylä
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the spring semester, during period 3.

Learning outcomes:
After completing the course, a student understands advanced software testing techniques, their benefits and limitations. The student is also able to apply these techniques in practice to simple software testing problems with software test automation tools.

Contents:
Advanced testing techniques: Model-based testing, search-based testing, mutation, exploratory testing, combinatorial testing, static testing, static analyzers, test environments, virtualization, OS system containers, test automation.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 24h, exercises 18h, lecture questions 15h, lab reports 15h, project 30h.

**Target group:**
MSc students

**Prerequisites and co-requisites:**
Basics on software testing.

**Recommended optional programme components:**

**Recommended or required reading:**
Articles + lectures.

**Assessment methods and criteria:**
Active lecture participation, exercises, assignments, term project.

**Grading:**
Numerical scale 1-5 or fail

**Person responsible:**
Mika Mäntylä

**Working life cooperation:**

**812651S: ICT and Behaviour Change, 5 op**

**Voimassaolo:** 01.08.2011 -

**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Piia Tiikka

**Opintokohde:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
English

**Timing:**
The course is held in the autumn semester, during period 2.

**Learning outcomes:**
After successfully completing the course, a student will be able to analyze methods and techniques that are used in and for persuasion; apply these methods in an ethical manner as design guidelines for developing applications that target change in human behaviour or attitudes.

**Contents:**
Attitudinal theories from social psychology have been quite extensively applied to the study of user intentions and behaviour. These theories have been developed mostly for predicting user acceptance of information technology rather than for providing systematic analysis and design methods for developing software solutions that aim at attitude or behaviour change. At the same time a growing number of information technology systems and services are being developed for these purposes. This course will focus on persuasive technology. It will address the process of designing and evaluating persuasive systems, the types of content and software functionality in such systems, the underlying assumptions behind these, methods for analysing the persuasion context, and principles for persuasive system design. Positive examples of persuasive systems include motivating knowledge workers to do their work better or safer and embracing citizens for healthy living habits. Negative examples are games that inflict addiction. Both sides of influence will be discussed.
Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 24h, reflective personal exercises 30h, independent work 80h (of which reading for lectures 12h and assignments 68h).

Target group:
MSc students

Prerequisites and co-requisites:
Understanding the roles of humans as users and developers of ICT.

Recommended optional programme components:
Emerging Technologies and Issues

Recommended or required reading:
Research articles to be announced more specifically during the course implementation.

Assessment methods and criteria:
Participation in lectures, personal reflection reports, course assignments.

Grading:
Numerical scale 1-5 or fail

No

811392A: Preparatory Course for MSc Studies, 5 op

Voimassaolo: 01.03.2014 - 31.12.2018
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Arto Lanamäki
Opintokohteen kielet: English

ECTS Credits:
2 ECTS credits / 53 hours of work.

Language of instruction:
English.

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After completing the course, the student is able to participate in courses requiring basic knowledge of project work. The student is able to apply the basic concepts of project work, act in different roles in projects and is able to describe the significance of the different project outcomes, such as project plan, mid-reports and final reports. The student is able to define the principles of project coordination and communication with the project interest groups. Additionally, the student is able to consider the principles of referenced and scientific writing.

Contents:
The focus of the course is in the people, process and tools of a project in information technology field. Course covers the basic principles of project management, planning, coordination and communication within the project as well as outside the project. Course presents the different outcomes of the project, related to internal and external communication – project plans, mid-report, final reports and other project specific outcomes, as well as internal reports, memos and non-written communication and coordination techniques in a project. The latter include unofficial and official meetings held within the project as well as among the external interest groups of the project (for example, customers and the project steering group). Finally, the course presents the basics of written referenced and scientific communication – how to use references, how to acknowledge work of others, how to format an article and what is plagiarism and how to avoid plagiarism.

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Lectures and exercises 20h, independent learning methods 34h.

Target group:
Msc students. The course is meant especially for those master's students who have not studied in our bachelor's program. Note that it is not possible to take both this and these related courses: 811311A Project management principles and 811382A Introduction to research work.

**Recommended optional programme components:**
Especially recommended to take before these courses: Project II, Software factory project course.

**Recommended or required reading:**
Provided when the course starts

**Assessment methods and criteria:**
Active participation in the lectures and exercises; learning diary.

**Grading:**
Pass or fail.

**Person responsible:**
Arto Lanamäki

**Working life cooperation:**

**813630S: Software Business Development, 5 op**

**Voimassaolo:** 01.08.2011 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Information Processing Science DP
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Jukka Kontula

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits/134 hours of work

**Language of instruction:**
English

**Timing:**
The course unit is held in the autumn semester, during period 2. It is recommended to complete the course in the first or second year of Master's studies.

**Learning outcomes:**
The course provides insights to business development on a business, company and industry level. After completing the course, the student is able to plan how business is being developed over the whole life cycle of the business and company, conduct market and business analyses, identify different sources of financing for business operation, evaluate different strategic business options and select a business model adequate for the present and future situation of the company.

**Contents:**
The course takes three points of view: company start-up, established business, and software industry. The course introduces the concepts of business idea, business plan, software business models and strategies, and the software value network.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 24h, exercises 12h, course assignments 78h, exam 20h. The course assignments will be conducted as group work.

**Target group:**

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following courses prior to enrolling for the course unit: 811174P Introduction to Software Business, 813316A Business Process Modelling and 813620S Software Business and IT Management.

**Recommended or required reading:**
Assessment methods and criteria:
This course unit utilizes continuous assessment. Lectures are for the most part voluntarily, but participation is recommended. The students will write course assignments which will be assessed. In addition, there will be an exam at the end of the course which will be assessed. The assessment of the course unit is based on the learning outcomes of the course unit.

813620S: Software Business Management, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Marianne Kinnula
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the spring semester, during period 3.

Learning outcomes:
Upon completion of the course, the student will be able to assess the main problem areas in software business management and is able to describe how to manage these problems; will be able to use different kinds of tools for managing this diverse and ambiguous environment; will understand the differences between leading and managing and be able to apply these to practice; will be able to analyse a company situation in a continually changing, unpredictable and even hostile environment, and is able to make well-grounded recommendations for the company courses of action.

Contents:
The software business environment and context is complex and under continuous change. Competences and creativity of company employees are needed for creating value and growth to the company. Managing a software business is a challenging task as traditional, rational management models are often inadequate for the needs of the managers. This course provides an overview of the strategic management of the software business in a software company.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and exercises 32h, group work 30h, course assignments and independent work 71 h.

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge of academic writing technique is needed. Basic understanding of the software business is an advantage.
Recommended optional programme components:

Recommended or required reading:
Lecture slides and specified literature.

Assessment methods and criteria:
Participation in lectures/exercises, group work, course assignments.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Marianne Kinnula

812670S: The Next Generation of the Web, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohde: English

ECTS Credits:
5 ECTS credits/134 hours of work

Language of instruction:
English

Timing:
1st – 2nd year of Master’s studies, spring semester, period 3

Learning outcomes:
After completing the course the student is able to:

- Apply the lessons learned for web design, organisational purposes and entrepreneurial activities; and
- Analyse issues related to web's development stages and trends and potentially even to predict potential future web;
- Develop businesses based on technology road mapping, scenario thinking, future forecasting, and research methods and theories of technological innovation and diffusion.

Contents:
The course will help the student to recognise and reflect on on-going and potential future web development trends. It will build upon understanding of the contemporary web, its conceptual background, and the changes that lead to the web we see today. The ultimate goal for the course is to foresee the potential future of the web for the upcoming five years. Thus, the name of the course is The Next Generation of the Web.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures/seminars 24h, independent work (reading and essay writing) 110h.

Target group:

Prerequisites and co-requisites:
Course “813619S Emerging Technologies and Issues” (strongly recommended).

Recommended optional programme components:

Recommended or required reading:
Scientific articles, the web. More sources to be announced specifically during the course implementation.

Assessment methods and criteria:
Participation in the lectures, student paper (only in English).

Read more about assessment criteria at the University of Oulu webpage.

Grading:
1–5
812671S: User Experience (UX) and Usability Evaluation, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mikko Rajanen
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English and Finnish
Timing:
The course is held in the spring semester, during periods 3 and 4.

Learning outcomes:
After completing the course, the student can:

- Design and follow through a usability testing process;
- Design usability test scenarios and tasks;
- Select test subjects;
- Plan and follow through usability tests as laboratory tests or field tests;
- Analyse and report the findings from usability tests.

Contents:
Basic terms and types of usability testing, usability tests process, usability test tasks and scenarios, test subjects, following through a usability test, analysing usability test material, reporting the findings from usability tests.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24h, assignment tutoring 13h, assignment 90h, seminar 7h.

Target group:
MSc students

Prerequisites and co-requisites:
Student is familiar with most common user interface design terms, design and evaluation methods as in “Introduction to Human-Computer Interactions” course.

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
Assessment of the course is based on the learning outcomes of the course based on the written usability test plan, supervised usability tests, written usability test report and oral seminar presentation

Grading:
Numerical scale 1-5 or fail.

Person responsible:
814601S: Work Experience in ICT responsibilities, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Advanced Studies
Laji: Practical training
Vastuuyksikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Tonja Molin-Juustila
Opintokohteen kielet: Finnish

ECTS Credits:
1-5 ECTS credits / 1–4 months of full time work.

Language of instruction:
Finnish or English.

Timing:
Timing of the course is free. The course is suitable also for the supported work placement studies.

Learning outcomes:
After completing the course, the student: will master certain part of professional ICT work in enterprises or public organisations; can analyse and reflect on the work experience with Information Processing Science studies; can write an informative report on his/her work experience.

Contents:
Working one to four months in professional ICT responsibilities that require university level studies. The work will be analysed and reflected by reporting.

Learning activities and teaching methods:
Job contract negotiation, work within the professional ICT responsibilities, reflecting by reporting.

Target group:
MSc students

Prerequisites and co-requisites:
Information Processing Science or related studies, which enable their practical application in the context of professional ICT responsibilities.

Recommended or required reading:
Studies and selected course materials are reflected on experience in professional ICT work.

Assessment methods and criteria:
Working in professional ICT responsibilities at least four months. Work experience can consist of more than one separate period with different employers. The work experience is proved by delivering a signed letter of reference and a report where it is reflected with the taken Information Processing Science studies. The studies are proved by delivering an up-to-date transcript of records. Proposals to develop Information Processing Science studies are included in the report.

Grading:
Pass/fail

Person responsible:
Tonja Molin-Juustila

Working life cooperation:
Working on professional ICT responsibilities.

Other information:
Report guidelines and a template are available by Optima. A copy of the letter of reference and working period will be recorded together with the credits.

812649S: Advanced Research Methods, 5 op
ECTS Credits: 5 ECTS credits / 133 hours of work

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 1st spring semester of the master's studies.

Learning outcomes:
Having completed the course, the student understands the background, philosophical assumptions and guiding principles of quantitative, qualitative and design science research, their role in information systems and software engineering research and the variety involved in them. The student can evaluate the strengths and weaknesses of the research approaches and methods in relation to her or his research topic as well as select the suitable approach and methods. The student is familiar with and able to use more advanced data analysis methods. The student can prepare a research plan for a research project, including formulating research problems, specifying research designs and choosing appropriate data collection and analysis methods for solving the problems. The student is familiar with state-of-the-art ways of reporting the results as well as able to evaluate the methodological quality of her or his research and research publications more generally. The student is able to search more information on research methods from scientific literature as well as to adapt and refine methods for her or his research problems and interests.

Contents:
Introduction to qualitative, quantitative and design science research in information systems and software engineering, their scientific background, philosophical assumptions and guiding principles, variety involved in them, relationships between the research approaches and associated frameworks, methods, processes and practices, advanced data analysis methods, reporting and evaluating research within the approaches.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 16h, exercises 12h, seminar 7h, individual and group assignments 100h.

Prerequisites and co-requisites:
Research methods course, basic knowledge about research methods, preliminary thesis topic. Recommended to take before Master's thesis.

Recommended or required reading:
Selected scientific articles or research method books.

Assessment methods and criteria:
Assignments
Grading:
Pass or fail

Person responsible:

Course covers the basic principles of project management, planning, coordination and communication within the project as well as outside the project. Course presents the different outcomes of the project, related to internal and external communication – project plans, mid-report, final reports and other project specific outcomes, as well as internal reports, memos and non-written communication and coordination techniques in a project. The latter include unofficial and official meetings held within the project as well as among the external interest groups of the project (for example, customers and the project steering group). Finally, the course presents the basics of written referenced and scientific communication – how to use references, how to acknowledge work of others, how to format an article and what is plagiarism and how to avoid plagiarism.

Mode of delivery:
Blended teaching.
Learning activities and teaching methods:
Lectures and exercises 20h, independent learning methods 34h.
Target group:
MSc students. The course is meant especially for those master's students who have not studied in our bachelor's program. Note that it is not possible to take both this and these related courses: 811311A Project management principles and 811382A Introduction to research work.

**Recommended optional programme components:**
Especially recommended to take before these courses: Project II, Software factory project course.

**Recommended or required reading:**
Provided when the course starts

**Assessment methods and criteria:**
Active participation in the lectures and exercises; learning diary.

**Grading:**
Pass or fail.

**Person responsible:**
Arto Lanamäki

**Working life cooperation:**
No

---

813630S: Software Business Development, 5 op

**Voimassaolo:** 01.08.2011 -

**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Jukka Kontula

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits/134 hours of work

**Language of instruction:**
English

**Timing:**
The course unit is held in the autumn semester, during period 2. It is recommended to complete the course in the first or second year of Master's studies.

**Learning outcomes:**
The course provides insights to business development on a business, company and industry level. After completing the course, the student is able to plan how business is being developed over the whole life cycle of the business and company, conduct market and business analyses, identify different sources of financing for business operation, evaluate different strategic business options and select a business model adequate for the present and future situation of the company.

**Contents:**
The course takes three points of view: company start-up, established business, and software industry. The course introduces the concepts of business idea, business plan, software business models and strategies, and the software value network.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 24h, exercises 12h, course assignments 78h, exam 20h. The course assignments will be conducted as group work.

**Target group:**

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following courses prior to enrolling for the course unit: 811174P Introduction to Software Business, 813316A Business Process Modelling and 813620S Software Business and IT Management.

**Recommended or required reading:**
Assessment methods and criteria:
This course unit utilizes continuous assessment. Lectures are for the most part voluntarily, but participation is
recommended. The students will write course assignments which will be assessed. In addition, there will be an exam
at the end of the course which will be assessed. The assessment of the course unit is based on the learning
outcomes of the course unit.

Read more about assessment criteria at the University of Oulu webpage.

Grading:
1–5

Person responsible:
Jukka Kontula

Working life cooperation:
No

813620S: Software Business Management, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Marianne Kinnula
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the spring semester, during period 3.

Learning outcomes:
Upon completion of the course, the student will be able to assess the main problem areas in software business
management and is able to describe how to manage these problems; will be able to use different kinds of tools for
managing this diverse and ambiguous environment; will understand the differences between leading and managing
and be able to apply these to practice; will be able to analyse a company situation in a continually changing,
unpredictable and even hostile environment, and is able to make well-grounded recommendations for the company
courses of action.

Contents:
The software business environment and context is complex and under continuous change. Competences and
creativity of company employees
are needed for creating value and growth to the company. Managing a software business is a challenging task as
traditional, rational
management models are often inadequate for the needs of the managers. This course provides an overview of the
strategic management of the
software business in a software company.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and exercises 32h, group work 30h, course assignments and independent work 71 h.

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge of academic writing technique is needed. Basic understanding of the software business is an
advantage.
Recommended optional programme components:

Recommended or required reading:
Lecture slides and specified literature.

Assessment methods and criteria:
Participation in lectures/exercises, group work, course assignments.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Marianne Kinnula

812670S: The Next Generation of the Web, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits/134 hours of work

Language of instruction:
English

Timing:
1 st – 2 nd year of Master’s studies, spring semester, period 3

Learning outcomes:
After completing the course the student is able to:

- Apply the lessons learned for web design, organisational purposes and entrepreneurial activities; and
- Analyse issues related to web’s development stages and trends and potentially even to predict potential future web;
- Develop businesses based on technology road mapping, scenario thinking, future forecasting, and research methods and theories of technological innovation and diffusion.

Contents:
The course will help the student to recognise and reflect on on-going and potential future web development trends. It will build upon understanding of the contemporary web, its conceptual background, and the changes that lead to the web we see today. The ultimate goal for the course is to foresee the potential future of the web for the upcoming five years. Thus, the name of the course is The Next Generation of the Web.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures/seminars 24h, independent work (reading and essay writing) 110h.

Target group:

Prerequisites and co-requisites:
Course “813619S Emerging Technologies and Issues” (strongly recommended).

Recommended optional programme components:

Recommended or required reading:
Scientific articles, the web. More sources to be announced specifically during the course implementation.

Assessment methods and criteria:
Participation in the lectures, student paper (only in English).

Read more about assessment criteria at the University of Oulu webpage.

812671S: User Experience (UX) and Usability Evaluation, 5 op

Voimassalo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mikko Rajanen
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English and Finnish
Timing:
The course is held in the spring semester, during periods 3 and 4.

Learning outcomes:
After completing the course, the student can:
  * Design and follow through a usability testing process;
  * Design usability test scenarios and tasks;
  * Select test subjects;
  * Plan and follow through usability tests as laboratory tests or field tests;
  * Analyse and report the findings from usability tests.

Contents:
Basic terms and types of usability testing, usability tests process, usability test tasks and scenarios, test subjects, following through a usability test, analysing usability test material, reporting the findings from usability tests.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24h, assignment tutoring 13h, assignment 90h, seminar 7h.

Target group:
MSc students

Prerequisites and co-requisites:
Student is familiar with most common user interface design terms, design and evaluation methods as in “Introduction to Human-Computer Interactions” course.

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
Assessment of the course is based on the learning outcomes of the course based on the written usability test plan, supervised usability tests, written usability test report and oral seminar presentation

Grading:
Numerical scale 1-5 or fail.

Person responsible:
814601S: Work Experience in ICT responsibilities, 5 op

Voimassaolo: 01.08.2010 - 01.08.2010
Opiskelumuoto: Advanced Studies
Laji: Practical training
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Tonja Molin-Juustila
Opintokohteen kielet: Finnish

ECTS Credits: 1-5 ECTS credits / 1–4 months of full time work.

Language of instruction: Finnish or English.

Timing: Timing of the course is free. The course is suitable also for the supported work placement studies.

Learning outcomes: After completing the course, the student: will master certain part of professional ICT work in enterprises or public organisations; can analyse and reflect on the work experience with Information Processing Science studies; can write an informative report on his/her work experience.

Contents: Working one to four months in professional ICT responsibilities that require university level studies. The work will be analysed and reflected by reporting.

Learning activities and teaching methods: Job contract negotiation, work within the professional ICT responsibilities, reflecting by reporting.

Target group: MSc students

Prerequisites and co-requisites: Information Processing Science or related studies, which enable their practical application in the context of professional ICT responsibilities.

Recommended or required reading: Studies and selected course materials are reflected on experience in professional ICT work.

Assessment methods and criteria: Working in professional ICT responsibilities at least four months. Work experience can consist of more than one separate period with different employers. The work experience is proved by delivering a signed letter of reference and a report where it is reflected with the taken Information Processing Science studies. The studies are proved by delivering an up-to-date transcript of records. Proposals to develop Information Processing Science studies are included in the report.

Grading: Pass/fail

Person responsible: Tonja Molin-Juustila

Working life cooperation: Working on professional ICT responsibilities.

Other information: Report guidelines and a template are available by Optima. A copy of the letter of reference and working period will be recorded together with the credits.

902140Y: Cross-Cultural Competence and Communication Skills, 2 op
Learning outcomes:
By the end of the course students will be able to:
- demonstrate understanding and awareness of cultural differences and their effect on communication especially in the working life
- act and behave appropriately in different kind of situations by taking into consideration cultural differences
- demonstrate the ability to analyze one’s own culture and discuss it with others
- show an understanding of communication in Finnish working life and culture

Contents:
This course is designed to bring about an understanding of intercultural competence as well as awareness of one’s own competence with cultural differences. In the course the background theory will be examined and one’s own skills will be assessed. In the course negotiating skills across cultures will be studied using the 12 variables of negotiating. Cross-cultural differences in business correspondence will also be examined.

Mode of delivery:
Lectures, study groups, Optima

Learning activities and teaching methods:
Contact lessons (24 h) and homework. The course will also have a short study group segment to practice cross-cultural communicative activities.

Target group:
The students of International Master’s Programme GS3D, Departement of Information Processing Science

Prerequisites and co-requisites:
-

Recommended optional programme components:
-

Recommended or required reading:
Will be provided by the teacher.

Assessment methods and criteria:
Participation in the class room sessions, homework and study group assignments. Read more about assessment criteria at the University of Oulu webpage.

Grading:
pass/fail

Person responsible:
Anne Koskela and Jaana Sorvari

Working life cooperation:
-

Other information:
Sign-up in WebOodi.
ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:
After completing the course the student is able to distinguish various roles of information and communication technology (ICT) in change of organization and its context, and be able to analyze the role of ICT in relation with change taking place in an organization.

Contents:
The course studies organisations at four levels: individuals, practices, organizational structures and transformations, and the societal context of organisations. The organizational role of ICT and the relation between ICT and knowledge are also discussed. A method for analysing organisations as networks of activity systems is presented. The role of power, trust and control in the change process is discussed. The different aspects of change agents are presented and analysed.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Introductory lectures 20h, seminar sessions 14h, individual work 100h (for a review and analysis of selected course materials and making a presentation for the seminar).

Prerequisites and co-requisites:
Recommended to take Emerging Technologies and Issues before this course.

Recommended optional programme components:

Recommended or required reading:
A list of research articles will be provided for the lectures and assignments. Readings for the background and theoretical framework are:

Assessment methods and criteria:
Lecture and seminar participation, assignment (literature review, analysis, seminar presentation). Alternatively by examination and personal assignment report.

Grading:
Numerical scale 1-5 or fail.

812349A: IT Infrastructure, 5 op
Arvostelu: 1 - 5, pass, fail

Opettajat: Petri Pulli, Aryan Firouzian

Opintokohteen kielet: English

ECTS Credits: 5 ECTS credits / 133 hours of work

Language of instruction: English

Timing: The course is held in the spring semester, during period 4. It is recommended to complete the course at the 1st spring semester.

Learning outcomes: After completing the course, students are able to judge, compare and apply data communications concepts and computing solutions to various situations encountered in industry; identify general concepts and techniques of data communications in different organizational environment; Explain core elements of IT infrastructure, principles underlying layered system architectures and the technology of the Internet; identify the most important server and storage architectures and the main mechanisms for providing high-capacity processing and storage capacity; Understand the principles of service virtualization, and concepts of IP networks and protocols; Explain structure of large-scale organizational IT infrastructure, and role of IT service management as organizational IT infrastructure solution; Understand opportunities for virtual computing service and configure IT infrastructure and security solution for small organization. The course aims to enable effective communication with technical, operational, managerial and service provider communities through improvement in technical knowledge and terminology. The course provides IT consultants with capabilities to make intelligent decisions regarding computing platform and service architectures by considering organizational flexibility.

Contents:

Mode of delivery: Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h, Student project guidance sessions 6h, student project work 85 h and examination 16 h

Target group: MSc students

Prerequisites and co-requisites: Basic knowledge on computer, network and Internet architecture.

Recommended optional programme components:

Recommended or required reading: Lecture notes, scientific articles.

Assessment methods and criteria: Accepted project work and examination.

Grading: Numerical scale 1-5 or fail.

Person responsible: Petri Pulli ja Aryan Firouzian

Working life cooperation: No

813623S: Information Security Policy and Management in Organisations, 5 op

Voimassaolo: 01.08.1950 -

Opiskelumuoto: Advanced Studies

Laji: Course
Vastuuysikkö: Information Processing Science DP  
Arvostelu: 1 - 5, pass, fail  
Opettajat: Li Zhao  
Opintokohteen kielet: English

ECTS Credits: 5 ECTS credits / 133 hours of work.  
Language of instruction: English  
Timing: The course is held in the autumn semester, during period 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes: After completing the course, the student is able to: • Develop BCP (Business Continuity Planning); • Develop organisation specific information security policies and sub-policy systems in organisations; • Improve employees’ compliance with the information security procedures through training, campaigning and other measures; • Carry out risk management in practice; • Estimate the economical investment in information security; • Understand the strengths and weaknesses of information security management standards; • Understand the certifications in the area of information security management; • Understand the security risks related to cloud computing and Internet of Things; • Design information security policies at organisations.

Contents:  
1. BCP;  
2. Development of organisation specific information security policies and sub-policy systems at organisations;  
3. Measuring employees’ compliance with information security policies;  
4. Improving employees’ compliance with the information security procedures through training, campaigning and other means;  
5. Information security risk management in practice, estimation of economical investment in information security;  
6. Information security management standards;  
7. Certifications related to information security.

Mode of delivery: Face-to-face teaching  
Target group: MSc students  
Prerequisites and co-requisites: Bachelor degree or other equivalent degree and course “811168P Introduction to Information Security” or principles of information security, or similar knowledge obtained from other courses.  
Recommended or required reading: Raggad, Bel G.: Information security management, Concepts and practice, CRC Press 2010, Chapters 1, 2.7. – 2.13, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13, and 15

Assessment methods and criteria: Examination.  
Grading: Numerical scale 1-5 or fail.  
Person responsible: Li Zhao

813613S: Master's Thesis, 30 op

Voimassaolo: 01.08.2011 -  
Opiskelumuoto: Advanced Studies  
Laji: Diploma thesis  
Vastuuysikkö: Information Processing Science DP  
Arvostelu: 1 - 5, pass, fail  
Opintokohteen kielet: English
ECTS Credits:
30 ECTS credits/800 hours of work.

Language of instruction:
Finnish/English.

Timing:
Timing is free; execution can be allocated over several semesters. Obligatory for Master’s degree. During 1st and 2nd year of Master’s studies.

Learning outcomes:
After completing the thesis the student can:

- Define a relevant focused problem in the field of information processing science;
- Apply a scientific method as a tool in solving the stated research problem;
- Synthesise research results and evaluate their validity;
- Write a scientific thesis based on the accomplished research according to the department’s guidelines;
- Participate in the evolution of ICT and postgraduate studies after completing the thesis.

Mode of delivery:
Face-to-face meetings and electronic communication with the supervisor.

Learning activities and teaching methods:
Conducting and reporting research under supervision of personal advisor.

Prerequisites and co-requisites:
The research plan and the final draft of the thesis will be presented in the “Master’s Thesis Seminar” (813602S).

Assessment methods and criteria:
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The supervisor and a second independent reviewer will evaluate the thesis using the scale 1–5.

Person responsible:
Kari Kuutti

Working life cooperation:
Especially empirical Master’s theses are often done in cooperation with private or public sector.

813627S: Master's Thesis Seminar, 2 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuksikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

Required proficiency level:

ECTS Credits:
2 ECTS credits / 1 ECTS for GS3D students

Language of instruction:
Finnish / English

Timing:
The course is held throughout the study year, in all periods.

Learning outcomes:
By completing this course the students can plan a scientific study, is capable of presenting own research plan and final draft of own Master’s thesis, and understands the approach the reviewers use to evaluate the thesis.

**Contents:**
See “assessment methods”.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Planning and presenting the student’s own research. Listening to peers’ research plans and research reports.

**Target group:**
MSc students

**Recommended optional programme components:**
813613S Master’s Thesis course.

**Recommended or required reading:**
Guidelines to producing a Master’s thesis.

**Assessment methods and criteria:**
Active participation in at least seven seminar sessions. One session lasts about 2 hours and they are arranged during the semesters according to the plan published on the website. The students will present their own research plan and the research before official evaluation. During the presentation the research will be discussed critically by an opponent.

**Grading:**
Pass or fail.

**Person responsible:**
Jouni Similä

**Working life cooperation:**
No

**Other information:**

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Henrik Hedberg

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
English

**Timing:**
The course is held in the autumn semester, during periods 1 and 2.

**Learning outcomes:**
After passing the course, a student will be able to
• define the historical background and the ideology of Open Source Software (OSS),

• participate in OSS development project,

• evaluate the impact of the usage of OSS and OSS licenses on software development and exploitation, and

• view the phenomenon through the essential scientific research.

Contents:
The course introduces OSS development paradigm and current topics in OSS research. OSS affects both the way to produce software and the decisions of user organizations. It can be understood, for example, from different social, legal, economical, software engineering and data security viewpoints. The aim is to study from different perspectives, for example, what OSS is and what it is not, the history and organisation of OSS projects, methods of OSS development and usage, as well as licensing models and possible risks. The emphasis is on research work.

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Lectures and seminars about 40 h, exercises and peer reviews about 20 h, seminar article and presentation about 70 h

Target group:
MSc students

Prerequisites and co-requisites:
Compulsory prerequisites are Bachelor degree or other equivalent degree and basic knowledge on software engineering and research work. The course allows passing Project following the OSS development principles, or writing Master's thesis on a OSS topic.

Recommended or required reading:

Assessment methods and criteria:
Active participation, seminar article and other assignments

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Henrik Hedberg

811392A: Preparatory Course for MSc Studies, 5 op

Voimassaolo: 01.03.2014 - 31.12.2018
Opiskelumoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Arto Lanamäki
Opintokohteen kielet: English

ECTS Credits:
2 ECTS credits / 53 hours of work.

Language of instruction:
English.

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After completing the course, the student is able to participate in courses requiring basic knowledge of project work. The student is able to apply the basic concepts of project work, act in different roles in projects and is able to describe the significance of the different project outcomes, such as project plan, mid-reports and final reports. The student is able to define the principles of project coordination and communication with the project interest groups. Additionally, the student is able to consider the principles of referenced and scientific writing.

Contents:
The focus of the course is in the people, process and tools of a project in information technology field. Course covers the basic principles of project management, planning, coordination and communication within the project as well as outside the project. Course presents the different outcomes of the project, related to internal and external communication – project plans, mid-report, final reports and other project specific outcomes, as well as internal reports, memos and non-written communication and coordination techniques in a project. The latter include unofficial and official meetings held within the project as well as among the external interest groups of the project (for example, customers and the project steering group). Finally, the course presents the basics of written referenced and scientific communication – how to use references, how to acknowledge work of others, how to format an article and what is plagiarism and how to avoid plagiarism.

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Lectures and exercises 20h, independent learning methods 34h.

Target group:
Msc students. The course is meant especially for those master's students who have not studied in our bachelor's program. Note that it is not possible to take both this and these related courses: 811311A Project management principles and 811382A Introduction to research work.

Recommended optional programme components:
Especially recommended to take before these courses: Project II, Software factory project course.

Recommended or required reading:

521146S Research Methods in Computer Science 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
Having completed the course, the student is able to explain the general principles of scientific research and the practices of scientific methodology. The student is also able to generate research problems in information systems and software engineering. The student is able to identify and describe the main research approaches and methods in information systems and software engineering and choose the appropriate approach and method for a research problem. The student is also able to evaluate the methodological quality of a research publication. After the course the student is able to choose and apply the proper approach and method for his or her Master’s thesis and find more information on the method from scientific literature.

Contents:
Introduction to general scientific principles, scientific research practices and quality of scientific publications, qualitative research approaches and selected research methods, quantitative research approaches and selected research methods, design science research and selected methods, requirements and examples of Master’s theses, evaluation of research.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 40h, exercises 30h and individual work 65h. Learning diary is written about the lectures and exercises. Exercises include group work.

**Target group:**
MSc students

**Prerequisites and co-requisites:**
Completion of Bachelor’s studies

---

**817602S: Software Development in Global Environment, 5 op**

**Voimassaolo:** 01.08.2011 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuyksikkö:** Information Processing Science DP
**Arvostelu:** 1 - 5, pass, fail
**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work.

**Language of instruction:**
English

**Timing:**
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

**Learning outcomes:**
After completing the course, the student

- Can define the key success factors of Global Software Design (GSD) and the potential problems in coordination of projects where teams are separated by physical and/or temporal distance;
- Can define and evaluate the collaborative technologies, which in the best way support distributed software development;
- Can choose the methods and tools for distributed software development;
- Can apply the practices of GSD in a student project and use the supporting tools throughout the project life cycle.

**Contents:**
Some of the topics covered are strategic issues in distributed development (off-shoring, near-shoring, outsourcing, OSS); cost-benefit-risk analysis; the triad of coordination, control and communication; team building (e.g. virtual teams); software process paradigms in the global environment (planned, agile); methods and tools for distributed software development; issues related to allocation of tasks; communication issues that arise due to distance and time zone differences; infrastructure support; geographical dispersion; lack of information communication; coordination complexity; cultural issues; technical issues related to information and artefact sharing; architectural design; and finally knowledge management issues. The lectures and seminars also review current research aspects of the GSD and related case studies from industry. The exercises demonstrate distributed software development as a virtual team with the support of appropriate methods and tools.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and seminars involving all the students as well as lecture assignments (reading articles and writing analyses) 70h (20h lecture attendances, 30h lecture assignments, 20h additional reading), and exercises 65h. For lecture assignments each student will read, summarize and analyse selected academic articles. The exercises include laboratory demonstrations of different supporting tools for distributed software development. The students train in project software development and planning practices in a distributed environment. The student project groups are organised into virtual (distributed) teams of 4 students.

Target group:
MSc students.

Prerequisites and co-requisites:
Basic knowledge of academic writing technique is needed. Basic understanding of software business is an advantage.

Recommended or required reading:
To be announced during the course implementation.

Assessment methods and criteria:
By active participation or alternatively exam, based on the course study materials.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Jouni Similä

Working life cooperation:
No

Other information:
Participation: The course is obligatory for GS 3D students and software engineering students; the total number of students is limited according to the departmental selection rule (valintasääntö, kts. Opinto-opas). 80% attendance is required. Web page:
https://noppa.oulu.fi/noppa/kurssi/817602s/etusivu

815662S: Software Engineering Management, Measurement and Improvement, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Oivo, Markku Tapani
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Timing:
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 2nd autumn semester.
Learning outcomes:
After completing the course the student understands the fundamental principles of software processes and their
development in professional
software engineering. The course extends the quality understanding based on individual techniques (e.g. reviews) so
that after completing
the course the student is able to: - Evaluate different methods and techniques; - Select from them appropriate ones
for different software
engineering environments; - Have capabilities to participate in systematic efforts for improvement in software
companies.

Contents:
The course covers the most fundamental process centred software quality improvement and management
approaches, methods and latest research results, as well as approaches to software measurement. The topics of the
course include: traditional waterfall, agile (extreme programming, scrum, rational unified process, crystal, feature
driven development, adaptive software development, dynamic systems development method) and lean methods,
process improvement approaches, software process and product measurement, agile and lean practices, process
improvement at the enterprise level and practical examples from software industry.

Target group:
MSc students

Prerequisites and co-requisites:
B.Sc. or other equivalent degree and basic knowledge of software engineering

Recommended or required reading:
- CMMI: Guidelines for Process Integration and Product Improvement. Mary Beth Chrissis, Mike Konrad, Sandy
- Dingsøyr T., Dybå T., Moe N.B., Agile Software Development: Current Research and Future Directions,
  Springer, 2010
  Osborne Media, 2008.
- Craig Larman and Bas Vodde, Scaling Lean & Agile Development: Thinking and Organizational Tools for
  Large-Scale Scrum, Addison-Wesley, 2009

Assessment methods and criteria:
Active and regular participation to lectures and seminars AND report evaluation AND seminar presentations

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Markku Oivo

817614S: Software Factory Project, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumooto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Oivo, Markku Tapani
Opintokohteen kiele: English

ECTS Credits:
10 ECTS credits / 267 hours of work.

Language of instruction:
English

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course in the
1st spring semester.

Learning outcomes:
After completing the course, the students should demonstrate their abilities to work on a challenging ICT project.
Students will learn to acquire and apply professional expertise in the topic of the project. Students will also
demonstrate their skills to conduct an ICT project in a professional way. By completing this course, students are able
to act as independent professional members of an ICT project and have advanced professionalism in project work
and management. The topics for the course can be anything from the ICT field. As a professional expert conducting a
successful project in a managed way, the student is able to: collectively produce, monitor and update the plan of the
project (project with fixed time and human resources); search up to date information on the subject matter of the
project in order to build professional expertise on the topic and apply this in the project work; build professional
working knowledge and skills focused in the subject area of the project (e.g. software development, user experience
evaluation); develop analytical and creative skills for successful completion of the
project; monitor and communicate the status (time & human resources used) of the project in real time within the
project team (weekly/daily meetings); use systematic means (e.g. ICT tools) to enable communication and
transparency of the project work; develop skills to communicate with the customer in a professional context; manage
a successful project review with the steering group/project team organization; report and explain the status (progress,
results and future estimations of the project) to the steering group to support the decision making and problem
resolution concerning the project’s future; work as responsible project team member; as an expert and/or project
manager; work as a project team member with people from different technical and/or cultural backgrounds; produce a
realistic outcome in relation to the project time and human resources (ok, good, excellent); reflect the relationship
between the process model(s) selected for the project (waterfall, evolutionary, agile etc.) and the management
practices followed in the project.

Contents:
Starting lectures (4x2h) and two workshops (2x8h), where the steps of carrying out the course will be described
together with other important information. Allocation of the project teams will immediately follow the starting lectures. The project work will take two periods (one semester).

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Project work 260h per student. Working hours reported during the project. Attendance at the starting lectures (8h)
and workshops (16h) is mandatory.

Target group:
MSc students.

Prerequisites and co-requisites:
Mandatory: B.Sc. degree or other equivalent degree. Students enrolling directly to the Master’s programme should
take the “Preparatory course for MSc studies (811392A)” course first (see the timetable for the autumn semester,
period 1) or otherwise master the basics of project work and management as in Pressman, R.S. Software Engineering: A Practitioner’s Approach, the chapters related to project management.

Recommended or required reading:
Unique project material provided by the customer of the project and/or material to be collected and studied by the
project team.

Assessment methods and criteria:
Skills will be reported by a project portfolio. Detailed assessment criteria will be given at the starting lecture and they
will also be available in the web-based learning environment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Markku Oivo

Working life cooperation:
Yes. Learning by doing, i.e. managing authentic, resource-limited project work and integrating the practices of an
academic expert into the unique project assignment.

Other information:
Enrollment for the course is well beforehand.

817603S: System Design Methods for Information Systems, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Pasi Karppinen
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After the course the student understands the complexity of business, organizational, technical, and human aspects that affect ISD and the selection of methods in ISD. The student also understands the defects of traditional waterfall model and how other methods aim to answer to these defects and to other challenges in ISD. In particular, with socio-technical methods (e.g., SSM, ETHICS) and their techniques the student is able to re-plan and develop the sub-systems (automated and non-automated) of organization into a coherent whole and to take into account job satisfaction issues in addition to efficiency demands in ISD and in planning workflows in organization. The student is also able to assess and give arguments which method is suitable for an ISD project in an organization.

813625S: Information Systems Theory, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP  
Arvostelu: 1 - 5, pass, fail  
Opintokohteen kielet: English

ECTS Credits:  
5 ECTS credits / 133 hours of work.

Language of instruction:  
English

Timing:  
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:  
After completing the course, students will have a good knowledge and understanding of a broad array of research topics and themes within the field of information systems; will have good knowledge and understanding of information systems research and the process by which that research is produced; will have competence in critiquing research articles published in some of the leading academic journals and conference proceedings; will have competence in critical thinking, and analysis and synthesis of academic sources; will have competence in verbally presenting arguments in an academic fashion; will know how to write a literature review on an information systems research topic.

Contents:  
Information Systems Research Overview, A contemporary selection of Information Systems research themes.

Mode of delivery:  
Face-to-face teaching

Learning activities and teaching methods:  
Lectures 24 h, seminars 10 h, individual and group assignments 100 h; or self-study: opening lecture 2 h, assignments 132 h.

Target group:  
MSc students

Prerequisites and co-requisites:  
Bachelor's degree or similar, Research Methods course. Recommended to take before Master's Thesis.

Recommended optional programme components:  

Recommended or required reading:  
Selection of scientific articles.

Assessment methods and criteria:  
Accepted assignments

Grading:  
Numerical scale 1-5 or fail

Person responsible:  
Netta Iivari

Working life cooperation:  
No

815663S: Software Engineering Research, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP  
Arvostelu: 1 - 5, pass, fail  
Opintokohteen kielet: English

ECTS Credits:  
5 ECTS credits / 133 hours of work.

Language of instruction:  
English
Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 2nd autumn semester.

Learning outcomes:
After completing the course the student will know the current research areas in software engineering and the most important software engineering research methods. The student understands academic research and publishing in software engineering, and is able to critically analyse scientific articles from the viewpoint of the content and research methods used in the article. The student is able to present academic research and actively participate in an academic discussion of research papers and research results.

Contents:
State of the art research methods and topics in software engineering.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and seminars 28h, exercises/ assignments 78h, weekly study 42h.

Target group:
MSc students

Prerequisites and co-requisites:
B.Sc. or other equivalent degree

Recommended or required reading:

Assessment methods and criteria:
Active Participation to lectures and attendance. Final grade is composed of attendance, assignments and term paper. No remote participation or distance learning.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Burak Turhan

Other information:
It is not possible to complete the course remotely or with self-study options.

813630S: Software Business Development, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Jukka Kontula
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits/134 hours of work

Language of instruction:
English

Timing:
The course unit is held in the autumn semester, during period 2. It is recommended to complete the course in the first or second year of Master's studies.

Learning outcomes:
The course provides insights to business development on a business, company and industry level. After completing the course, the student is able to plan how business is being developed over the whole life cycle of the business and company, conduct market and business analyses, identify different sources of financing for business operation, evaluate different strategic business options and select a business model adequate for the present and future situation of the company.

Contents:
The course takes three points of view: company start-up, established business, and software industry. The course introduces the concepts of business idea, business plan, software business models and strategies, and the software value network.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24h, exercises 12h, course assignments 78h, exam 20h. The course assignments will be conducted as group work.

Target group:

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course unit: 811174P Introduction to Software Business, 813316A Business Process Modelling and 813620S Software Business and IT Management.

Recommended or required reading:
Refer to the course web pages

Assessment methods and criteria:
This course unit utilizes continuous assessment. Lectures are for the most part voluntarily, but participation is recommended. The students will write course assignments which will be assessed. In addition, there will be an exam at the end of the course which will be assessed. The assessment of the course unit is based on the learning outcomes of the course unit.

Read more about assessment criteria at the University of Oulu webpage.

Grading:
1–5

813620S: Software Business Management, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Marianne Kinnula
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the spring semester, during period 3.

Learning outcomes:
Upon completion of the course, the student will be able to assess the main problem areas in software business management and is able to describe how to manage these problems; will be able to use different kinds of tools for managing this diverse and ambiguous environment; will understand the differences between leading and managing and be able to apply these to practice; will be able to analyse a company situation in a continually changing, unpredictable and even hostile environment, and is able to make well-grounded recommendations for the company courses of action.

Contents:
The software business environment and context is complex and under continuous change. Competences and creativity of company employees are needed for creating value and growth to the company. Managing a software business is a challenging task as traditional, rational management models are often inadequate for the needs of the managers. This course provides an overview of the strategic management of the software business in a software company.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures and exercises 32h, group work 30h, course assignments and independent work 71 h.

**Target group:**
MSc students

**Prerequisites and co-requisites:**
Basic knowledge of academic writing technique is needed. Basic understanding of the software business is an advantage.

**Recommended optional programme components:**

**Recommended or required reading:**
Lecture slides and specified literature.

**Assessment methods and criteria:**
Participation in lectures/exercises, group work, course assignments.

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Marianne Kinnula

**Working life cooperation:**
No

815303A: Embedded Software Development Environments, 5 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Juustila, Antti Juhani

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Timing:**
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 1st spring semester.

**Learning outcomes:**
After completing the course, a student is able to work with the essential software development tools of a selected embedded platform. The student is able to implement memory and power efficient applications by exploiting existing libraries and knowledge of the programming interfaces provided by the platform.

**Contents:**
The focus of the course is in the software development environments and tools for mobile and embedded platforms, such as Android, iOS, and Windows Phone. In addition, the course covers memory and power management, core services of the platform, and the utilisation of existing libraries. One platform will be selected for deeper study, and the course introduces its essential software development tools and libraries. The emphasis is on application development for the platform as an exercise.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures and exercises about 40 h, exercises and exercise work 93 h

**Target group:**
Prerequisites and co-requisites:
Course “815309A Real-time Distributed Software Development”, C/C++ and/or Java programming skills or similar knowledge obtained from other courses.

Recommended or required reading:
Course material, the documentation of selected technologies, and other related literature

Assessment methods and criteria:
Exercise work
Grading:
Numerical scale 1-5 or fail.

Antti Juustila

811600S: Emerging Trends in Software Engineering, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mika Mäntylä
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits /133 hours of student work

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1.

Learning outcomes:
After completing the course, a student understands the recent trends in software engineering. The student is able to argue and discuss the significance of the trends to one’s own work and to software engineering discipline in general. The student is able to perform trend mining to discover new trends.

Contents:
- Software engineering trends (varies yearly) -
Trend mining - Writing, arguing and discussing about the trends

Mode of delivery:
Face-to-Face teaching.

Learning activities and teaching methods:
Lectures 24h, exercises 18h, essays 30h, project 30h, independent study 30h.

Target group:
MSc students

Prerequisites and co-requisites:
Basics on software engineering

Recommended optional programme components:
No

Recommended or required reading:
Articles + lectures.

Assessment methods and criteria:
Active lecture participation, exercises, assignments, essays.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Mika Mäntylä

Working life cooperation:
No

811601S: Emerging Trends in Software Testing, 5 op
Language of instruction: English
Timing: The course is held in the spring semester, during period 3.
Learning outcomes: After completing the course, a student understands advanced software testing techniques, their benefits and limitations. The student is also able to apply these techniques in practice to simple software testing problems with software test automation tools.
Contents: Advanced testing techniques: Model-based testing, search-based testing, mutation, exploratory testing, combinatorial testing, static testing, static analyzers, test environments, virtualization, OS system containers, test automation.
Mode of delivery: Face-to-face teaching
Learning activities and teaching methods: Lectures 24h, exercises 18h, lecture questions 15h, lab reports 15h, project 30h.
Target group: MSc students
Prerequisites and co-requisites: Basics on software testing.
Recommended optional programme components:
Recommended or required reading: Articles + lectures.
Assessment methods and criteria: Active lecture participation, exercises, assignments, term project.
Grading: Numerical scale 1-5 or fail
Person responsible: Mika Mäntylä
Working life cooperation: No

812349A: IT Infrastructure, 5 op

Language of instruction:
Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 1st spring semester.

Learning outcomes:
After completing the course, students are able to judge, compare and apply data communications concepts and computing solutions to various situations encountered in industry; identify general concepts and techniques of data communications in different organizational environment; Explain core elements of IT infrastructure, principles underlying layered system architectures and the technology of the Internet; identify the most important server and storage architectures and the main mechanisms for providing high-capacity processing and storage capacity; Understand the principles of service virtualization, and concepts of IP networks and protocols; Explain structure of large-scale organizational IT infrastructure, and role of IT service management as organizational IT infrastructure solution; Understand opportunities for virtual computing service and configure IT infrastructure and security solution for small organization. The course aims to enable effective communication with technical, operational, managerial and service provider communities through improvement in technical knowledge and terminology. The course provides IT consultants with capabilities to make intelligent decisions regarding computing platform and service architectures by considering organizational flexibility.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h, Student project guidance sessions 6h, student project work 85 h and examination 16 h

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge on computer, network and Internet architecture.

Recommended optional programme components:

Recommended or required reading:
Lecture notes, scientific articles.

Assessment methods and criteria:
Accepted project work and examination.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Petri Pulli ja Aryan Firouzian

Working life cooperation:
No

521147S: Mobile and Social Computing, 5 op

Voimassaolo: 01.08.2012 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Computer Science and Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettaja: Denzil Teixeira Ferreira
Opintokohde kielet: Finnish
Leikkaavuudet:
521046A Mobile Computing 5.0 op
521045S Mobile Computing 5.0 op
Proficiency level:
English B2 - C2

ECTS Credits:
5

Language of instruction:
In English.

Timing:
Spring, periods 3-4

Learning outcomes:
1. Ability to implement mobile user interfaces
2. Ability to implement online social network applications
3. Ability to explain the fundamental concepts of context awareness
4. Ability to explain the fundamental concepts of online communities

Contents:
Mobile interface design and implementation, mobile sensor acquisition, context awareness, social platforms, crowdsourcing, online communities, graph theory.

Mode of delivery:
Face to face teaching + independent work.

Learning activities and teaching methods:
Lectures, exercises, and practical work. The course is passed with an approved practical work. The implementation is fully English.

Target group:
Computer Science and Engineering students and other Students of the University of Oulu.

Prerequisites and co-requisites:
Object oriented programming.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
All necessary material will be provided by the instructor.

Assessment methods and criteria:
The assessment is project-based. Students have to complete individual assignments throughout the semester and a final pair-based project: build a mobile application, conduct or analysis of data. Passing criteria: the assignments and the project must be completed, receiving more than 50% of the available points.

Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Denzil Ferreira

Working life cooperation:
None.

815657S: Open Source Software Development, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Henrik Hedberg
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work
Language of instruction:
English
Timing:
The course is held in the autumn semester, during periods 1 and 2.
Learning outcomes:
After passing the course, a student will be able to

- define the historical background and the ideology of Open Source Software (OSS),
- participate in OSS development project,
- evaluate the impact of the usage of OSS and OSS licenses on software development and exploitation, and
- view the phenomenon through the essential scientific research.

Contents:
The course introduces OSS development paradigm and current topics in OSS research. OSS affects both the way to produce software and the decisions of user organizations. It can be understood, for example, from different social, legal, economical, software engineering and data security viewpoints. The aim is to study from different perspectives, for example, what OSS is and what it is not, the history and organisation of OSS projects, methods of OSS development and usage, as well as licensing models and possible risks. The emphasis is on research work.

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Lectures and seminars about 40 h, exercises and peer reviews about 20 h, seminar article and presentation about 70 h.

Target group:
MSc students

Prerequisites and co-requisites:
Compulsory prerequisites are Bachelor degree or other equivalent degree and basic knowledge on software engineering and research work. The course allows passing Project following the OSS development principles, or writing Master's thesis on a OSS topic.

Recommended or required reading:

Assessment methods and criteria:
Active participation, seminar article and other assignments

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Henrik Hedberg

521260S: Programmable Web Project, 5 op

Voimassaolo: 01.08.2006 -
Opiskelumoto: Advanced Studies
Laji: Course
Vastuuysikkö: Computer Science and Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Ivan Sanchez Milara
Opintokohteen kiellet: English
Leikkaavuudet:
ay521260S Programmable Web Project (OPEN UNI) 5.0 op

Status:
The course is mandatory for International Master's Programme in Computer Science and Engineering and Master's Programme in Computer Science and Engineering. It is optional for other degree and master programmes.

ECTS Credits:
5

Language of instruction:
In English.

Timing:
Spring, periods 3-4.
Learning outcomes:
1. Understands the main design concepts related to REST architectural style and ROA architecture
2. Is able to design, test and implement different components of a RESTful Web API
3. Understands what hypermedia is and how can it be used to build RESTful Web APIs
4. Is able to implement simple clients using Web technologies
5. Becomes familiar with basic technologies to store persistent data on the server and serialize data in the Web

Contents:
RESTful Web APIs, hypermedia, transactional/non-transactional databases, RESTful clients (HTML5 and Javascript).

Mode of delivery:
Web-based teaching and face-to-face teaching.

Learning activities and teaching methods:
Lectures 4 h, guided laboratory work 15 h, the rest as self-study and group work. Each group implements programs and writes a report.

Target group:
M.Sc. level students of Computer Science and Engineering; other students of the university of Oulu are accepted if there is enough space in the classes.

Prerequisites and co-requisites:
Elementary programming. Applied Computing Project I is recommended.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
This course unit utilizes continuous assessment. The project work is divided in different deadlines that students must meet to pass the course. Each deadline will be assessed after completion.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Ivan Sanchez Milara

Working life cooperation:
None.

Other information:
This course replaces the course “521260S Representing structured information”.

815305A: Real Time Distributed Software Development, 5 op

ECTS Credits:
5 ECTS credits / 133 hours of work.

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After completing the course, the student:

- Is able to analyse the characteristics of real-time distributed systems;
Is able to acquire an object-oriented, model-based approach to solve the design problems found in real-time systems;
Is able to detect and derive specific problems facing the real-time software designer, and to suggest design patterns to solve those problems.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 40h, design exercises 15h, student project 80h.

Target group:
MSc students

Prerequisites and co-requisites:
Computer architecture, object-oriented analysis and design (UML), programming language C and/or Java.

Recommended or required reading:

Assessment methods and criteria:
Exam and project evaluation

Grading:
Numerical scale 1-5 or fail.

English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
After completing the course, the student

- Can define the key success factors of Global Software Design (GSD) and the potential problems in coordination of projects where teams are separated by physical and/or temporal distance;
- Can define and evaluate the collaborative technologies, which in the best way support distributed software development;
- Can choose the methods and tools for distributed software development;
- Can apply the practices of GSD in a student project and use the supporting tools throughout the project life cycle.

Contents:
Some of the topics covered are strategic issues in distributed development (off-shoring, near-shoring, outsourcing, OSS); cost-benefit-risk analysis; the triad of coordination, control and communication; team building (e.g. virtual teams); software process paradigms in the global environment (planned, agile); methods and tools for distributed software development; issues related to allocation of tasks; communication issues that arise due to distance and time zone differences; infrastructure support; geographical dispersion; lack of information communication; coordination complexity; cultural issues; technical issues related to information and artefact sharing; architectural design; and finally knowledge management issues. The lectures and seminars also review current research aspects of the GSD and related case studies from industry. The exercises demonstrate distributed software development as a virtual team with the support of appropriate methods and tools.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and seminars involving all the students as well as lecture assignments (reading articles and writing analyses) 70h (20h lecture attendances, 30h lecture assignments, 20h additional reading), and exercises 65h. For lecture assignments each student will read, summarize and analyse selected academic articles. The exercises include laboratory demonstrations of different supporting tools for distributed software development. The students train in project software development and planning practices in a distributed environment. The student project groups are organised into virtual (distributed) teams of 4 students.

Target group:
MSc students.

Prerequisites and co-requisites:
Basic knowledge of academic writing technique is needed. Basic understanding of software business is an advantage.

Recommended or required reading:
To be announced during the course implementation.

Assessment methods and criteria:
By active participation or alternatively exam, based on the course study materials.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Jouni Similä

Working life cooperation:
No

Other information:
Participation: The course is obligatory for GS 3D students and software engineering students; the total number of students is limited according to the departmental selection rule (valintasääntö, kts. Opinto-opas). 80% attendance is required. Web page: https://noppa.oulu.fi/noppa/kurssi/817602s/etusivu

815662S: Software Engineering Management, Measurement and Improvement, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Oivo, Markku Tapani
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Timing:
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 2nd autumn semester.
Learning outcomes:
After completing the course the student understands the fundamental principles of software processes and their development in professional software engineering. The course extends the quality understanding based on individual techniques (e.g. reviews) so that after completing the course the student is able to:
- Evaluate different methods and techniques;
- Select from them appropriate ones for different software engineering environments;
- Have capabilities to participate in systematic efforts for improvement in software companies.

Contents:
The course covers the most fundamental process centred software quality improvement and management approaches, methods and latest research results, as well as approaches to software measurement. The topics of the course include: traditional waterfall, agile (extreme programming, scrum, rational unified process, crystal, feature driven development, adaptive software development, dynamic systems development method) and lean methods, process improvement approaches, software process and product measurement, agile and lean practices, process improvement at the enterprise level and practical examples from software industry.

Target group:
MSc students

Prerequisites and co-requisites:
B.Sc. or other equivalent degree and basic knowledge of software engineering

Recommended or required reading:
- Craig Larman and Bas Vodde, Scaling Lean & Agile Development: Thinking and Organizational Tools for Large-Scale Scrum, Addison-Wesley, 2009

Assessment methods and criteria:
Active and regular participation to lectures and seminars AND report evaluation AND seminar presentations

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Markku Olivo

815312A: Software Production and Maintenance, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mika Mäntylä
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits/133 hours of work

Timing:
The course is held in the spring semester, during period 3. It is recommended to complete the course in the 1st spring semester.

Learning outcomes:
After completing the course, the student:
- Can apply the framework of product line engineering in large scale software production;
- Can apply the maintenance process and techniques in software production.

Contents:
Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24h, exercises/ assignments 18h, weekly study and learning diary 42h, term project 45h.

Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge of software engineering and software architectures.

Recommended or required reading:

Assessment methods and criteria:
Active Participation to lectures and attendance. Final grade is composed of attendance, learning diary, assignments and term project.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Mika Mäntylä

815311A: Software Quality and Testing, 5 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Intermediate Studies

Laji: Course
Vastuuyksikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Burak Turhan
Opintokohde kielet: English
Leikkaavuudet:

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during period 1. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
The student understands different views on software quality and the role of testing as a part of software engineering validation and verification activities, and defect identification/ removal techniques. The student knows testing levels, strategies and techniques, can create test cases and conduct unit testing with appropriate testing tools. The student knows the basics of test driven development and test automation.

Contents:
Software quality and quality assurance. Software quality management and metrics. Fundamental concepts of software testing. Functional and structural testing. Unit, integration, system, acceptance and regression testing. Hands on test-driven development. Test automation

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24 h, exercises/ assignments 24 h, weekly study 42 h, term project 42 h

Target group:
MSc students

Prerequisites and co-requisites:
Working knowledge of Java programming language is required. Basic knowledge of software engineering.

**Recommended optional programme components:**

**Recommended or required reading:**
- Galin D., “Software Quality Assurance: From theory to implementation”, Addison-Wesley, 2004

**Assessment methods and criteria:**
- Active Participation to lectures and attendance. Final grade is composed of attendance, assignments and term project. No remote participation or distance learning.

**Grading:**
- Numerical scale 1-5 or fail.

**Person responsible:**
- Muhammad Farooq

**Working life cooperation:**
- No

---

**812331A: Interaction Design, 5 op**

**Voimassaolo:** 01.08.2015 -  
**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Information Processing Science DP

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Netta Iivari

**Opintokohteen kielet:** English

**ECTS Credits:**
- 5 ECTS credits/133 hours of work

**Language of instruction:**
- English

**Timing:**
- The course is held in the autumn semester, during period 1. It is recommended to complete the course at the 1st autumn semester.

**Learning outcomes:**

**Objective:** The course explains the role of human interaction with IT products, systems, and services, explains the factors and problems related to it to motivate interaction design, and teaches some user-centered methods for analysis, evaluation and design of interactions.

**Learning Outcomes:** After completing the course, the student can assess the role of human interaction with IT products, systems, and services and identify factors and problems related to it within a practical design case. The student is able to:

- use methods for analysis and evaluation of existing interfaces;
- understand the role of requirements, plan and conduct a simple requirements collection and analysis;
- use basic principles of usability and user experience for user interface design;
- use interaction design methods in designing for target user experiences.

**Contents:**
- The course provides an overview of interaction design, introducing the terminology and fundamental concepts, the main activities, and the importance of user involvement in the design process. The course addresses establishing requirements for IT products, systems, and services. The focus is on usability and user experience from the viewpoint of the intended users, their tasks and the context of use. The course covers user-centered methods for designing for and evaluating usability and user experience of IT products, systems, and services. All the main activities of interaction design are carried out in a practical design case.

**Mode of delivery:**
- Face-to-face teaching, self-study

**Learning activities and teaching methods:**
- Lectures 20 h, exercises and seminar 25 h, individual and group assignments 90 h; or self-study: an opening lecture 2 h, one larger assignment 110 h and individual tasks 21 h.
Target group:
MSc students

Prerequisites and co-requisites:
Basic knowledge on human-computer interaction with usability and user-centered design.

Recommended or required reading:
Sharp et al. (2007) Interaction Design, chapters 1-2, 4-5, 7-13 (pages 1-88, 134-215, 290-643) OR more recent version in electronic format NEEDS TO BE DISCUSSED WITH LIBRARY.

Assessment methods and criteria:
Accepted assignments.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Netta Iivari

Working life cooperation:
No

Other information:
The course book will be available in electronic format that would be very useful, as the book is updated regularly and we are using a very old version.

813613S: Master's Thesis, 30 op

Voimassaolo: 01.08.2011 -
Opiskelumuoto: Advanced Studies
Laji: Diploma thesis
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
30 ECTS credits/800 hours of work.

Language of instruction:
Finnish/English.

Timing:
Timing is free; execution can be allocated over several semesters. Obligatory for Master’s degree. During 1st and 2nd year of Master’s studies.

Learning outcomes:
After completing the thesis the student can:

• Define a relevant focused problem in the field of information processing science;
• Apply a scientific method as a tool in solving the stated research problem;
• Synthesise research results and evaluate their validity;
• Write a scientific thesis based on the accomplished research according to the department’s guidelines;
• Participate in the evolution of ICT and postgraduate studies after completing the thesis.

Mode of delivery:
Face-to-face meetings and electronic communication with the supervisor.

Learning activities and teaching methods:
Conducting and reporting research under supervision of personal advisor.

Prerequisites and co-requisites:
The research plan and the final draft of the thesis will be presented in the “Master’s Thesis Seminar” (813602S).

Assessment methods and criteria:
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The supervisor and a second independent reviewer will evaluate the thesis using the scale 1–5.

Person responsible:
Kari Kuutti
Working life cooperation:
Especially empirical Master’s theses are often done in cooperation with private or public sector.

813627S: Master’s Thesis Seminar, 2 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

Required proficiency level:

ECTS Credits:
2 ECTS credits / 1 ECTS for GS3D students

Language of instruction:
Finnish / English
Timing:
The course is held throughout the study year, in all periods.

Learning outcomes:
By completing this course the students can plan a scientific study, is capable of presenting own research plan and final draft of own Master’s thesis, and understands the approach the reviewers use to evaluate the thesis.

Contents:
See “assessment methods”.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Planning and presenting the student’s own research. Listening to peers’ research plans and research reports.

Target group:
MSc students

Recommended optional programme components:
813613S Master’s Thesis course.

Recommended or required reading:
Guidelines to producing a Master’s thesis.

Assessment methods and criteria:
Active participation in at least seven seminar sessions. One session lasts about 2 hours and they are arranged during the semesters according to the plan published on the website. The students will present their own research plan and the research before official evaluation. During the presentation the research will be discussed critically by an opponent.

Grading:
Pass or fail.

Person responsible:
Jouni Similä

Working life cooperation:
No

Other information:
813607S: Maturity test, 0 op

Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

817609S: Project Seminar, 3 op

Voimassaolo: 01.08.2013 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Tonja Molin-Juustila
Opintokohteen kielet: English

ECTS Credits:
3 ECTS credits / 80 hours of work.
Language of instruction:
English.
Timing:
The timing of the course is dependent on the “Research and Development Project (817612S)” course and will immediately follow the project in the next semester. It is recommended to complete the course at the 2nd spring semester, period 3.
Learning outcomes:
After completing the course, the students should demonstrate their abilities to work as academic experts in challenging ICT projects. Students will learn to acquire and apply research articles and other new knowledge like an academic expert in a selected topic of their project (“Research and Development Project” course). Students will also learn to analyse and report their experience-based new knowledge on the topic to peer students. By completing this course, students are able to act as reflective, independent academic experts in ICT projects and have learnt expertise in some topic area of their project. As an expert in the selected topic area, the student is able to: search research articles and literature on the topic (review); report practical experiences gained during the project on the topic; evaluate the results of the project and reflect the practical experiences against previous literature and research on the topic; disseminate the (increased) expertise in the topic in a credible way to peers both by a written report and orally.
Contents:
Starting lecture, independent analysis and reporting of the expertise on the selected project topic and an expert seminar (1-2 days) with the presentations of each topic.
Mode of delivery:
Blended teaching.
Learning activities and teaching methods:
Attendance at the starting lecture (4h) and the expert seminar (1-2 full days) is mandatory. Independently writing the seminar paper and preparing the seminar presentation (n. 50h).
Target group:
MSc students.
Prerequisites and co-requisites:
Mandatory: Research and Development Project (817612S) during autumn semester, periods 1&2. This course will immediately follow the project course on the project topics. For the students of the Master’s degree programme on Software, Systems, and Service Development (GS3D), Software Factory Project Course (817611S) is mandatory before this course.

Recommended or required reading:
Research articles and materials are to be independently collected and studied by the students.
Assessment methods and criteria:
Expertise in the topic area will be reported on the seminar paper. Seminar presentation will also be evaluated. Assessment criteria in detail will be given at the starting lecture and in the web-based learning environment of the course.

**Grading:**
Numerical scale 1-5 or fail.

**Person responsible:**
Tonja Molin-Juustila

**Working life cooperation:**
No

817614S: Software Factory Project, 10 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Information Processing Science DP
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Oivo, Markku Tapani
**Opintokohteen kielet:** English

**ECTS Credits:**
10 ECTS credits / 267 hours of work.

**Language of instruction:**
English

**Timing:**
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course in the 1st spring semester.

**Learning outcomes:**
After completing the course, the students should demonstrate their abilities to work on a challenging ICT project. Students will learn to acquire and apply professional expertise in the topic of the project. Students will also demonstrate their skills to conduct an ICT project in a professional way. By completing this course, students are able to act as independent professional members of an ICT project and have advanced professionalism in project work and management. The topics for the course can be anything from the ICT field. As a professional expert conducting a successful project in a managed way, the student is able to: collectively produce, monitor and update the plan of the project (project with fixed time and human resources); search up to date information on the subject matter of the project in order to build professional expertise on the topic and apply this in the project work; build professional working knowledge and skills focused in the subject area of the project (e.g. software development, user experience evaluation); develop analytical and creative skills for successful completion of the project; monitor and communicate the status (time & human resources used) of the project in real time within the project team (weekly/daily meetings); use systematic means (e.g. ICT tools) to enable communication and transparency of the project work; develop skills to communicate with the customer in a professional context; manage a successful project review with the steering group/project team organization; report and explain the status (progress, results and future estimations of the project) to the steering group to support the decision making and problem resolution concerning the project’s future; work as responsible project team member; as an expert and/or project manager; work as a project team member with people from different technical and/or cultural backgrounds; produce a realistic outcome in relation to the project time and human resources (ok, good, excellent); reflect the relationship between the process model(s) selected for the project (waterfall, evolutionary, agile etc.) and the management practices followed in the project.

**Contents:**
Starting lectures (4x2h) and two workshops (2x8h), where the steps of carrying out the course will be described together with other important information. Allocation of the project teams will immediately follow the starting lectures. The project work will take two periods (one semester).

**Mode of delivery:**
Blended teaching.

**Learning activities and teaching methods:**
Project work 260h per student. Working hours reported during the project. Attendance at the starting lectures (8h) and workshops (16h) is mandatory.

**Target group:**
MSc students.
Prerequisites and co-requisites:
Mandatory: B.Sc. degree or other equivalent degree. Students enrolling directly to the Master’s programme should take the “Preparatory course for MSc studies (811392A)” course first (see the timetable for the autumn semester, period 1) or otherwise master the basics of project work and management as in Pressman, R.S. Software Engineering: A Practitioner's Approach, the chapters related to project management.

Recommended or required reading:
Unique project material provided by the customer of the project and/or material to be collected and studied by the project team.

Assessment methods and criteria:
Skills will be reported by a project portfolio. Detailed assessment criteria will be given at the starting lecture and they will also be available in the web-based learning environment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Markku Oivo

Working life cooperation:
Yes. Learning by doing, i.e. managing authentic, resource-limited project work and integrating the practices of an academic expert into the unique project assignment.

Other information:
Enrollment for the course is well beforehand.

813627S: Master's Thesis Seminar, 2 op

Voimassaolo: 01.08.2015 -

Leikkaavuudet:

521146S  Research Methods in Computer Science  5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 1st autumn semester.

Learning outcomes:
Having completed the course, the student is able to explain the general principles of scientific research and the practices of scientific methodology. The student is also able to generate research problems in information systems and software engineering. The student is able to identify and describe the main research approaches and methods in information systems and software engineering and choose the appropriate approach and method for a research problem. The student is also able to evaluate the methodological quality of a research publication. After the course the student is able to choose and apply the proper approach and method for his or her Master’s thesis and find more information on the method from scientific literature.

Contents:
Introduction to general scientific principles, scientific research practices and quality of scientific publications, qualitative research approaches and selected research methods, quantitative research approaches and selected research methods, design science research and selected methods, requirements and examples of Master’s theses, evaluation of research.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40h, exercises 30h and individual work 65h. Learning diary is written about the lectures and exercises. Exercises include group work.

Target group:
MSc students

Prerequisites and co-requisites:
Completion of Bachelor’s studies
Recommended optional programme components:

Recommended or required reading:
Lecture slides and specified literature

Assessment methods and criteria:
Accepted learning diary.
Grading:
Pass or fail.

Person responsible:
Arto Lanamäki
Working life cooperation:
No

815663S: Software Engineering Research, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laij: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
English

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course in the 2nd autumn semester.

Learning outcomes:
After completing the course the student will know the current research areas in software engineering and the most important software engineering research methods. The student understands academic research and publishing in software engineering, and is able to critically analyse scientific articles from the viewpoint of the content and research methods used in the article. The student is able to present academic research and actively participate in an academic discussion of research papers and research results.

Contents:
State of the art research methods and topics in software engineering.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and seminars 28h, exercises/ assignments 78h, weekly study 42h.

Target group:
MSc students

Prerequisites and co-requisites:
B.Sc. or other equivalent degree

Recommended or required reading:

Assessment methods and criteria:
Active Participation to lectures and attendance. Final grade is composed of attendance, assignments and term paper. No remote participation or distance learning.
Grading:
Numerical scale 1-5 or fail.

Person responsible:
Burak Turhan

Other information:
It is not possible to complete the course remotely or with self-study options.
814342A: , 5 - 15 op

Voimassaolo: 01.08.2016 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Henrik Hedberg
Opintokohteen kielet: Finnish

811336A: Cooperation in information processing, 1 - 5 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Anna-Liisa Syrjänen
Opintokohteen kielet: Finnish

ECTS Credits:
1-5 ECTS credits/27-133 hours of work.

Language of Instruction:
Reporting in Finnish or English.

Timing:
The course can be completed during the autumn periods 1 or 2 or during the spring semester periods 3 or 4. Guiding teaching event will be held once per the semester.

Learning outcomes:
After completing the course, the student is able to identify characters of cooperation within some information processing tasks and report on practical experiences for the development of cooperation.

Contents:
Work group coordination, cooperative workshops or tutoring in information processing tasks and experience reporting.

Mode of delivery:
Blended teaching, self-study.

Learning activities and teaching methods:
The implementation methods of course vary and will be agreed on together with the students. There will be 2 hours of guided teaching in a group and 23-129 hours individual work and cooperation with others without guidance. This contains agreeing of cooperation, planning and implementation and reporting. Private guidance will be 2 hours.

Target group:
Bachelor or Master level, 2nd year students.

Prerequisites and co-requisites:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended optional programme components:
Management of the related information processing tasks.
Recommended or required reading:
Information processing literature related to the topic of the cooperation.

Assessment methods and criteria:
The students will be compiling an implementation report all through the course. This report will be assessed based on the learning outcomes of the course. The assessment criteria will be explained during the group teaching event.
Grading:
Pass / fail.
Person responsible:
Anna-Liisa Syrjänen
Working life cooperation:
No

814311A: Internship in ICT-duties, 3 - 5 op

Opiskelumuoto: Intermediate Studies
Laji: Practical training
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Tonja Molin-Juustila
Opintokohteen kielet: Finnish

ECTS Credits:
1-5 ECTS credits/1 – 4 months of full time work

Language of instruction:
Internship guidelines, report template and documentation in Finnish or in English.

Timing:
Recommended to take as a summer course, suitable for the supported work placement studies.

Learning outcomes:
During an internship period a student works in typical professional ICT duties to develop expertise in this field, practicing the work, its description and analysis, by applying what s/he has learned in Bachelor and/or Master level studies.

Contents:
Training one to four months in professional ICT duties that include orientation with the tasks and guiding when needed. Description and analysis of training by reporting.

Mode of delivery:
The student makes the needed arrangements for internship, negotiates job contract with an employer, makes the support application as needed, follows the agreed labor agreement, works within the agreed duties, studies independently the needed professional skills and knowledge, and documents and describes the internship in a report.

Learning activities and teaching methods:
Internship agreement, support application, internship, reporting.

Prerequisites and co-requisites:
Information Processing Science or related studies, which enable their practical application in the context of professional ICT duties.

Recommended or required reading:
Course materials related to the internship duties.

Assessment methods and criteria:
Internship is proved by delivering a signed letter of reference from the employer. The letter of reference contains details of the internship period and the student’s primary duties. An internship report consists of description of realized work and analysis of learning outcomes in relation to the taken studies in Information Processing Science. The studies are proved by delivering an up-to-date transcript of records. Internship can be realized in several periods, which all are proved with the letter of reference and reported as soon as possible after the internship period.

Grading:
Pass/fail
Person responsible:
Tonja Molin-Juustila
815338A: Principles of Programming Languages, 5 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits: 5 ECTS credits/135 hours of work
Language of instruction: English
Timing: 2nd year, spring semester, period 3

Learning outcomes:
After completing the course, the student is able to explain the general principles and structures concerning design and implementation of programming languages. Furthermore, the student can compare properties of different programming languages. The student is able to explain the influence of aforementioned principles on usage and implementation of a programming language. Moreover, the student masters the basics of imperative programming and can describe the principle ideas of abstract data types, object-oriented programming, and exception handling. The student can explain the basic concepts of functional programming, logic programming and concurrent programming.

Contents:
History of programming languages, Syntax and semantics of programming languages, Abstract data types and object-oriented programming, Exception handling, Logic programming, Concurrent programming.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 32h, laboratory exercises 21h, and independent work 82h

Prerequisites and co-requisites:
Courses “Introduction to Programming”, “Programming Assignment”, or similar knowledge.

Recommended or required reading:

Assessment methods and criteria:
Final exam.
Grading:
1-5

Person responsible:
Sandun Dasanayake
Working life cooperation:

814340A: Small-Group Tutoring, 3 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Leena Ventä-Olkkonen
Opintokohteen kielet: Finnish

ECTS Credits:
3 ECTS credits/80 hours of work

Language of instruction:
Finnish

Timing:
2nd – 5th year, autumn and spring semester, periods 1–4

Learning outcomes:
After passing the course a student (tutor) is able to:

- Draw up a supervision plan for his/her small group;
- Put into effect his/her supervision from the viewpoint of students and based on the given tutor training;
- Receive supervision and guidance experience;
- Take responsibility for his/her own supervision work.

Contents:
1. Group training, occasions and meetings 25h
2. Planning and implementation of small-group tutoring 53h
3. Writing his/her own report diary 2h.

Mode of delivery:
Face-to-face teaching and web-based teaching.

Learning activities and teaching methods:
Lectures, exercises and meetings. Practice as a small-group tutor in co-operation with other tutors, Blanko student organisation, library and own department’s study-counsellors. Independent personal work.

Recommended or required reading:
Training materials, forms and own reports.

Assessment methods and criteria:
Active participation in tutor-training, implementing small-group tutoring and drawing up the supervision plan and the report diary.

Read more about assessment criteria at the University of Oulu webpage.

Grading:
Pass/fail

812315A: Software Construction, 10 op

Voimassaolo: 01.08.2014 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits:
5 cr

Language of instruction:
Finnish and English

Timing:
The course is held in the summer. It is recommended to complete the course on the summer between 2nd or 3rd study years.

Learning outcomes:
After completing the course, the student
- knows the difference between imperative and functional programming and is able to create simple functional
- is able to increase the stability of his/her programs
- has built a code library that enables the reuse of components
- can construct a program with control of concurrent processing
- can create a distributed network application

Contents:
1. Functional programming
2. Defensive programming
3. Code libraries and reuse of components
4. Concurrent programming
5. Programming of distributed systems.
Five modules, each having kick-off and conclusion seminars. Between seminars, the student constructs an assignment.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Seminars 60 h, independent work/group work 207 h

Target group:
BSc students majoring Information Processing Science

Prerequisites and co-requisites:

Recommended or required reading:
Announced the before the kick-off seminar of each module

Assessment methods and criteria:
Five programming assignments and attending the seminars, grading is based on programming assignments

Grading:
0-5
