Opasraportti

FTEch - Field of Mechanical Engineering (2017 - 2018)

Tutkintorakenteet

B.Sc., Mechanical Engineering 2017

Tutkintorakenteen tila: archived

Lukuvuosi: 2017-18

Lukuvuoden alkamispäivämäärä: 01.08.2017

Basic and Intermediate Studies, Mechanical Engineering (135 op)

A460120: Basic and Intermediate Studies, Mechanical Engineering, 109.5 - 120 op

- 460083P: Orientation Course for New Students, 1 op
- 031010P: Calculus I, 5 op
- 031075P: Calculus II, 5 op
- 031076P: Differential Equations, 5 op
- 461101A: Mathematical Analysis in Mechanical Engineering, 5 op
- 761113P: Electricity and magnetism, 5 op
- 761310A: Wave motion and optics, 5 op

Compulsory

- 761310A-01: Wave motion and optics, lectures and exam, 0 op
- 761310A-02: Wave motion and optics, lab. exercises, 0 op
- 555225P: Basics of industrial engineering and management, 5 op
- 030005P: Information Skills, 1 op
- 901044Y: Second Official Language (Swedish), Written Skills, 1 op
- 901045Y: Second Official Language (Swedish), Oral Skills, 1 op
- 465101A: Introduction to materials for mechanical engineering, 5 op
- 464101A: Machine drawing and CAD, 5 op
- 461102A: Statics, 5 op
- 461103A: Strength of materials I, 5 op
- 463101A: Introduction to manufacturing technology, 5 op
- 461011A: Strength of Materials II, 7 op
- 461106A: Dynamics, 5 op
- 464102A: Design of machine elements, 10 op
- 461105A: Technical thermodynamics, 5 op
- 463102A: Manufacturing technology I, 5 op
- 465102A: Materials for mechanical engineering, 5 op
- 460020A: Basics of computing and programming in mechanical engineering, 5 op
- 462101A: Information technology and machines, 5 op
- 462103A: Introduction to Maintenance, 5 op
- 555265P: Occupational Safety and Health Management, 5 op
- 555285A: Project management, 5 op
- 460003A: Practical training I, 5 op
Module Preparing for the Option (35 op)

Automotive Engineering
A460121: Module Preparing for the Option, Automotive Engineering, 40 op
- 462102A: Machine automation actuators, 5 op
- 464103A: Machine design, 5 op
- 464104A: Product innovations, 5 op
- 461107A: Finite Element Methods I, 5 op
- 462104A: Machine automation, 5 op
- 462107A: Maintenance of machines, 5 op
- 465104A: Heat treatment and welding of metals, 5 op

Machine Design
A460122: Module Preparing for the Option, Machine Design, 40 op
- 462102A: Machine automation actuators, 5 op
- 464103A: Machine design, 5 op
- 464104A: Product innovations, 5 op
- 461107A: Finite Element Methods I, 5 op
- 462104A: Machine automation, 5 op
- 462107A: Maintenance of machines, 5 op
- 465104A: Heat treatment and welding of metals, 5 op

Materials Engineering
A460123: Module Preparing for the Option, Materials Engineering, 36 op
- 462102A: Machine automation actuators, 5 op
- 465104A: Heat treatment and welding of metals, 5 op
- 465106A: Basics of corrosion in metals, 5 op
- 465105A: Research techniques for materials, 5 op
- 465103A: Principles of metal shaping and forming, 5 op
- 463105A: Casting techniques, 8 op

Mechatronics and Machine Diagnostics
A460124: Module Preparing for the Option, Mechatronics and Machine Diagnostics, 40,5 op
- 462102A: Machine automation actuators, 5 op
- 462105A: Machine Sensor Technology, 5 op
- 462104A: Machine automation, 5 op
- 462106A: Precision engineering, 5 op
- 464103A: Machine design, 5 op
- 462107A: Maintenance of machines, 5 op
- 521141P: Elementary Programming, 5 op

Structural Engineering and Construction Technology
A460125: Module Preparing for the Option, Structural Engineering and Construction Technology, 40,5 op
- 466101A: Introduction to building construction, 5 op
- 466102A: Introduction to structural design, 3 - 5 op
- 466103A: Project work in structural engineering, 5 op
Engineering Mechanics

A460126: Module Preparing for the Option, Engineering Mechanics, 37.5 op
- 462102A: Machine automation actuators, 5 op
- 461107A: Finite Element Methods I, 5 op
- 461109A: Finite element methods II, 5 op
- 461108A: Mechanics of materials, 5 op
- 464103A: Machine design, 5 op
- 031022P: Numerical Analysis, 5 op

Manufacturing Technology

A460128: Module Preparing for the Option, Production Technology, 37 op
- 462102A: Machine automation actuators, 5 op
- 463103A: Quality in production and dimensional measurements, 5 op
- 463104A: Advanced manufacturing methods, 7 op
- 463105A: Casting techniques, 8 op
- 465104A: Heat treatment and welding of metals, 5 op
- 462107A: Maintenance of machines, 5 op

Bachelor Thesis and Communication Studies (10 op)

A400075: Bachelor's Thesis and Seminar or Communication Studies, 10 op
- 900060A: Technical Communication, 2 op
- 469081A: Bachelor's Thesis / Mechanical Engineering, 8 op
- 469080A: The Maturity Test for BachelorŽs Degree, 0 op

M.Sc., Mechanical Engineering 2017

Tutkintorakenteen tila: published

Lukuvuosi: 2017-18

Lukuvuoden alkamispäivämäärä: 01.08.2017

Modules of the Options (45 - 70 op)

Automotive Engineering

A460221: Module of the Option, Automotive Engineering, 39.5 op
- 464122A: Mobile hydraulics, 5 op
- 464121A: Automotive engineering principles, 5 op
- 464123S: Structural systems in automotive vehicles, 5 op
- 464125S: Automotive development project, 10 op
- 464124A: Internal combustion engines, 5 op
- 464126S: Machine dynamics of piston engines, 5 op
- 461112S: Mechanical vibrations, 5 op
- 460004S: Practical Training II, 5 op

Machine Design
A460222: Module of the Option, Machine Design, 40 op

- 464106S: Production machine design, Paper machinery, 10 op
- 464107S: Machine design project, 10 op
- 464105S: Computer aided design, 5 op
- 461112S: Mechanical vibrations, 5 op
- 461110S: Fluid mechanics, 5 op
- 462105A: Machine Sensor Technology, 5 op
- 460004S: Practical Training II, 5 op

Materials Engineering

A460223: Module of the Option, Materials Engineering, 40 op

- 465107A: Introduction to physical metallurgy, 5 op
- 465108S: Modelling of metal forming processes, 5 op
- 465109S: Microstructural changes in metallic alloys, 7 op
- 465110S: Strength of metallic alloys, 7 op
- 465111S: Welding metallurgy, 8 op
- 465112S: Sheet metal forming, 8 op
- 465113S: Failure mechanisms in metals, 5 op
- 465114S: Exercises in physical metallurgy, 5 op
- 465115S: Processing and properties of steels, 5 op
- 465116S: Rolling technology, 10 op
- 460004S: Practical Training II, 5 op

Mechatronics and Machine Diagnostics, Mechatronics

A460224: Module of the Option/Mechatronics and Machine Diagnostics, Mechatronics, 40 op

- 462108S: Mechatronics, 6 op
- 462109S: Simulation and modelling of machines, 8 op
- 462110S: Advanced course in mechatronics, 8 op
- 477621A: Control System Analysis, 5 op
- 461112S: Mechanical vibrations, 5 op
- 521301A: Digital Techniques 1, 8 op
- 460004S: Practical Training II, 5 op

Mechatronics and Machine Diagnostics, Machine Diagnostics

A460225: Module of the Option/Mechatronics and Machine Diagnostics, Machine Diagnostics, 41,5 op

- 461107A: Finite Element Methods I, 5 op
- 461112S: Mechanical vibrations, 5 op
- 462111S: Machine diagnostics, 10 op
- 462112S: Measuring instruments in machine diagnostics, 5 op
- 465113S: Failure mechanisms in metals, 5 op
- 521301A: Digital Techniques 1, 8 op
- 031077P: Complex analysis, 5 op
- 460004S: Practical Training II, 5 op

Structural Engineering and Construction Technology

A460231: Module of the Option/Structural Engineering and Construction Technology, 45 op

- 466104S: Foundation engineering, 5 op
- 466105S: Design of Steel Structures, 6 op
- 466107S: Design of concrete structures, 6 op
- 466109S: Concrete technology, 5 op
- 466111S: Building physics, 5 op
- 485021A: Construction Contracting, 5 op
- 466114S: Building information modeling, 5 op
Engineering Mechanics

A460228: Module of the Option, Engineering Mechanics, 40 op

- 461110S: Fluid mechanics, 5 op
- 461111S: Continuum mechanics, 5 op
- 461112S: Mechanical vibrations, 5 op
- 461113S: Finite element methods III, 5 op
- 461115S: Fracture mechanics, 5 op
- 461116S: Experimental methods in engineering mechanics, 5 op
- 464106S: Production machine design, Paper machinery, 10 op
- 460004S: Practical Training II, 5 op

Production Technology

A460230: Module of the Option, Production Technology, 43,5 op

- 462104A: Machine automation, 5 op
- 463106S: Design and manufacture of sheet and plate metal products, 8 op
- 463107S: Manufacturing technology II, 20 op
- 463109S: Computer aided manufacturing, 7 op
- 460004S: Practical Training II, 5 op

Supplementary modules (25 - 30 op)

Automotive Engineering

A460246: Supplementary Module, Automotive Engineering, 20 op

- 461108A: Mechanics of materials, 5 op
- 461109A: Finite element methods II, 5 op
- 461113S: Finite element methods III, 5 op
- 462105A: Machine Sensor Technology, 5 op
- 462109S: Simulation and modelling of machines, 8 op
- 462111S: Machine diagnostics, 10 op
- 462112S: Measuring instruments in machine diagnostics, 5 op
- 463104A: Advanced manufacturing methods, 7 op
- 463105A: Casting techniques, 8 op
- 463106S: Design and manufacture of sheet and plate metal products, 8 op
- 463108S: Manufacturing technology II, 10 op
- 464105S: Computer aided design, 5 op
- 464108S: Advanced Topics on Machine Design, 5 - 10 op
- 465113S: Failure mechanisms in metals, 5 op
- 555343S: Product Data and product life cycle management, 5 op

Machine Design

A460247: Supplementary Module, Machine Design, 22 op

- 461108A: Mechanics of materials, 5 op
- 461109A: Finite element methods II, 5 op
- 461113S: Finite element methods III, 5 op
- 462109S: Simulation and modelling of machines, 8 op
- 462111S: Machine diagnostics, 10 op
- 462112S: Measuring instruments in machine diagnostics, 5 op
- 463104A: Advanced manufacturing methods, 7 op
- 463105A: Casting techniques, 8 op
- 463106S: Design and manufacture of sheet and plate metal products, 8 op
- 463108S: Manufacturing technology II, 10 op
64108S: Advanced Topics on Machine Design, 5 - 10 op
465113S: Failure mechanisms in metals, 5 op
466105S: Design of Steel Structures, 6 op
466106S: Advanced topics on design of steel structures, 6 op
555343S: Product Data and product life cycle management, 5 op

**Mechatronics and Machine Diagnostics, Mechatronics**

A460249: Supplementary Module/Mechatronics and Machine Diagnostics, Mechatronics, 20 op

- 521287A: Introduction to Computer Systems, 5 op
- 521077P: Introduction to Electronics, 5 op
- 031077P: Complex analysis, 5 op
- 031080A: Signal Analysis, 5 op
- 521431A: Principles of Electronics Design, 5 op
- 521302A: Circuit Theory 1, 5 op
- 521150A: Introduction to Internet, 5 op
- 811312A: Advanced Control and Systems Engineering, 5 op
- 477622A: Control System Design, 5 op
- 477522A: Advanced Control and Systems Engineering, 5 op
- 477525S: Computational intelligence in automation, 5 op
- 462113S: Advanced topics on mechatronics and machine diagnostics, 5 - 10 op
- 464105S: Computer aided design, 5 op
- 464122A: Mobile hydraulics, 5 op
- 461107A: Finite Element Methods I, 5 op
- 555343S: Product Data and product life cycle management, 5 op

**Mechatronics and Machine Diagnostics, Machine Diagnostics**

A460250: Supplementary Module/Mechatronics and Machine Diagnostics, Machine Diagnostics, 20 op

- 461110S: Fluid mechanics, 5 op
- 461116S: Experimental methods in engineering mechanics, 5 op
- 464106S: Production machine design, Paper machinery, 10 op
- 465106A: Basics of corrosion in metals, 5 op
- 477525S: Computational intelligence in automation, 5 op
- 555330S: Sourcing Management, 5 op
- 477625S: Power Plant Automation, 5 op
- 555286A: Process and quality management, 5 op
- 031080A: Signal Analysis, 5 op
- 521092A: Electronic Measurement Techniques, 5 op
- 521302A: Circuit Theory 1, 5 op
- 462113S: Advanced topics on mechatronics and machine diagnostics, 5 - 10 op
- 464105S: Computer aided design, 5 op
- 464122A: Mobile hydraulics, 5 op
- 461107A: Finite Element Methods I, 5 op
- 555343S: Product Data and product life cycle management, 5 op
- 465113S: Failure mechanisms in metals, 5 op

**Structural Engineering and Construction Technology**

A460256: Supplementary Module/Structural Engineering and Construction Technology, 25 op

- 466106S: Advanced topics on design of steel structures, 6 op
- 466108S: Advanced topics on design of concrete structures, 6 op
- 466110S: Advanced topics on concrete technology, 5 op
- 466112S: Advanced topics on building physics, 5 op
- 466115S: Information modelling and automation in infrastructure construction and maintenance, 5 op
- 466116S: Information modelling and automation in building construction and maintenance, 2.5 - 5 op
- 466118S: Advanced topics on structural engineering and construction technology, 5 - 10 op
- 488111S: Modelling in Geoenvironmental Engineering, 5 op
- 488121S: Fundamentals of Civil Engineering, 5 op
488127S: Field measurements, site investigations and geotechnical tests, 5 op
488131S: Geoenvironmental Engineering, 5 op
488132S: Cold Climate Engineering, 5 op
488151A: Basics of Traffic Engineering, 5 op
488152S: Advanced Course in Traffic Engineering, 5 op
488153A: Basics of Road Engineering, 5 op
488154S: Road Design and Construction, 5 op

Engineering Mechanics

A460253: Supplementary Module, Engineering Mechanics, 20 op
   461114S: Mechanics of composites, 5 op
   461117S: Engineering optimization, 5 op
   462109S: Simulation and modelling of machines, 8 op
   462111S: Machine diagnostics, 10 op
   462112S: Measuring instruments in machine diagnostics, 5 op
   464107S: Machine design project, 10 op
   465108S: Modelling of metal forming processes, 5 op
   465113S: Failure mechanisms in metals, 5 op
   466105S: Design of Steel Structures, 6 op
   466106S: Advanced topics on design of steel structures, 6 op
   031051S: Numerical Matrix Analysis, 5 op
   031025A: Introduction to Optimization, 5 op

Production Technology

A460255: Supplementary Module, Production Technology, 20 op
   555286A: Process and quality management, 5 op
   ay724106P: Principles of Marketing (OPEN UNI), 5 op
   555330S: Sourcing Management, 5 op
   555331S: Advanced Supply Chain Management, 5 op
   555333S: Production Management, 5 op
   555343S: Product Data and product life cycle management, 5 op
   462106A: Precision engineering, 5 op
   462111S: Machine diagnostics, 10 op
   462112S: Measuring instruments in machine diagnostics, 5 op
   464103A: Machine design, 5 op

Optional Studies (20 op)

Automotive Engineering

A460297: Optional Studies, Automotive Engineering, 20 op
   Electives
   300002M: Advanced Information Skills, 1 op

Machine Design

Materials Engineering

- 469090S: The Maturity Test for Master's Degree, 0 op

Tutkintorakenteisiin kuulumattomat opintokokonaisuudet ja -jaksot

466113S: Construction economics, 5 op

Opintojaksojen kuvaukset

Tutkintorakenteisiin kuuluvien opintokohteiden kuvaukset

A460120: Basic and Intermediate Studies, Mechanical Engineering, 109,5 - 120 op

Voimassaajo: 01.08.2005 -
Opiskelumuoto: Basic and Intermediate Studies
Laji: Study module
Vastaanottokohde: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintojen kieltä: Finnish

Ei opintojaksoa.

460083P: Orientation Course for New Students, 1 op

Opiskelumuoto: Basic Studies
Laji: Course
Vastaanottokohde: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Reijo Saari
**Opintokohde**

**Kielet:** Finnish

**Opiskelumuoto:** Basic Studies  
**Laji:** Course  
**Kasvatuspiiri:** Applied Mathematics and Computational Mathematics

**Arvostelu:** 1 - 5, pass, fail  
**Opettajat:** Ilkka Lusikka

**Opintokohde kielet:** Finnish

**Leikkaavuudet:**  
ay031010P  Calculus I (OPEN UNI)  5.0 op

---

**ECTS Credits:**
5 ECTS credits / 135 hours of work

**Language of instruction:**
Finnish. The course can be completed in English by intermediate exams or by a final exam.

**Timing:**
Autumn semester, period 1

**Learning outcomes:**
Upon completion of the course, the student identifies concepts of vector algebra, can use vector algebra for solving problems of analytic geometry, can explain basic characteristics of elementary functions, is able to analyse the limit and the continuity of real valued functions of one variable, can solve problems associated with differential and integral calculus of real valued functions of one variable.

**Contents:**
Vector algebra and analytic geometry. Limit, continuity, differential and integral calculus and applications of real valued functions of one variable. Complex numbers.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 28 h / Group work 22 h / Self-study 85 h.

**Target group:**
-

**Prerequisites and co-requisites:**
-

**Recommended optional programme components:**
-

**Recommended or required reading:**

**Assessment methods and criteria:**
Intermediate exams or a final exam.  
Read more about [assessment criteria](#) at the University of Oulu webpage.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Ilkka Lusikka

**Working life cooperation:**

031075P: Calculus II, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Applied Mathematics and Computational Mathematics
Arvostelu: 1 - 5, pass, fail
Opettajat: Ilkka Lusikka
Opintokohteen kielet: Finnish
Leikkaavuudet:
   ay031075P  Calculus II (OPEN UNI)  5.0 op
   031011P  Calculus II  6.0 op

ECTS Credits:
5 ECTS credits / 135 hours of work

Language of instruction:
Finnish. The course can be completed in English by intermediate exams or by a final exam.

Timing:
Spring, period 3

Learning outcomes:
Upon completion of the course, the student is able to examine the convergence of series and power series of real terms, can explain the use of power series e.g. in calculating limits, is able to solve problems related to differential and integral calculus of real and vector valued functions of several variables.

Contents:
Sequences, series, power series and Fourier series of real terms. Differential and integral calculus of real and vector valued functions of several variables.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:
-

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the course Calculus I.

Recommended optional programme components:
-

Recommended or required reading:

Assessment methods and criteria:
Intermediate exams or a final exam.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Ilkka Lusikka
031076P: Differential Equations, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Applied Mathematics and Computational Mathematics
Arvostelu: 1 - 5, pass, fail
Opettajat: Ruotsalainen Keijo
Opintokohteen kielet: Finnish
Leikkaavuudet:
  ay031076P  Differential Equations (OPEN UNI)  5.0 op
  800320A  Differential equations  5.0 op
  031017P  Differential Equations  4.0 op

ECTS Credits:
5 ECTS credits / 135 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring, during period 4. It is recommended to complete the course at the 1th spring semester.

Learning outcomes:
The students can apply differential equations as a mathematical model. They can identify and solve various differential equations and they have knowledge on basic solvability of differential equations. The student can use the Laplace transform as a solution method.

Contents:
Ordinary differential equations of first and higher order. Laplace transform with applications to differential equations.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:
1. year students of technical sciences, mathematics and physics.

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the course Calculus I.

Recommended optional programme components:

Recommended or required reading:
Recommended literature: Kreyszig, E: Advanced Engineering Mathematics;

Assessment methods and criteria:
The course can be completed by intermediate exams (2 exams) or by a final exam. Lue lisää opintosuoritusten arvostelusta yliopiston verkkosivulta.

Grading:
The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail

-

461101A: Mathematical Analysis in Mechanical Engineering, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Laukkanen, Jari Jussi
Opintokohteen kielet: Finnish

Leikkaavuudet:
460084P-01 Mathematical Analysis in Mechanical Engineering, examination 0.0 op
460084P-02 Mathematical Analysis in Mechanical Engineering, exercises 0.0 op
460084P Mathematical Analysis in Mechanical Engineering 7.0 op

ECTS Credits:
5 ects /135 hous of work

Language of instruction:
Finnish

Timing:
The lectures and weekly exercises are held during periods 1. - 2.

Learning outcomes:
Students can identify and solve various differential equations and they have knowledge on basic solvability of differential equations.

Contents:
Vectors, various differential equations, knowledge on basic solvability of differential equations.

Mode of delivery:
Face-to-face

Learning activities and teaching methods:
This course will be based on lectures 45 h and exercises 40 h and 45 h self-study during periods 1 – 2. Students are required to take a final exam or mid-term exams.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final examination. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
University Teacher Jari laukkanen
Learning outcomes:
The student is able to describe the basic concepts of electricity and magnetism and to apply those when solving the problems related to electromagnetism.

Contents:
Electromagnetic interaction is one of the four fundamental interactions in physics and many phenomena like light, radio waves, electric current, magnetism and formation of solid matter are based on electromagnetism. The current technological development is largely based on applications of electromagnetism in energy production and transfer, telecommunications and information technology.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h, 6 exercises (12 h), 2 laboratory exercises (8 h), self-study 83 h

Target group:
For the students of the University of Oulu.

Prerequisites and co-requisites:
Knowledge of vector calculus and basics of differential and integral calculus are needed.

Recommended optional programme components:
No alternative course units or course units that should be completed simultaneously

Recommended or required reading:
Lecture material: Finnish lecture material will be available on the web page of the course.
Course material availability can be checked here.

Assessment methods and criteria:
Four written intermediate examinations or final examination.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
761310A: Wave motion and optics, 5 op

**Voimassaolo:** 01.08.2017 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuyksikkö:** Field of Physics
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Seppo Alanko
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 766349A Wave motion and optics 7.0 op
- 761114P Wave motion and optics 5.0 op
- 761114P-02 Wave motion and optics, lab. exercises 0.0 op
- 761114P-01 Wave motion and optics, lectures and exam 0.0 op
- 766329A Wave motion and optics 6.0 op
- 761104P Wave Motion 3.0 op

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
Finnish. The course material and exercises are available in English.

**Timing:**
First spring

**Learning outcomes:**
The student is able to treat different types of waves by methods of general theory of wave motion. The student is also able to solve problems related to basic optics and apply her/his knowledge to teaching and research in physics.

**Contents:**
General principles of wave motion, sound, electromagnetic waves, propagation of light, image formation in mirrors and lenses, optical instruments, interference, Fraunhofer diffraction, diffraction grating, laser principles.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 28 h, exercises 14 h, 2 laboratory exercises (3 hours/exercise), self-study 90 h

**Target group:**
No specific target group

**Prerequisites and co-requisites:**
Basic skills in mathematics

**Recommended optional programme components:**
No alternative course units or course units that should be completed simultaneously

**Recommended or required reading:**
Assessment methods and criteria:
Two written intermediate examinations or one final examination

Grading:
Numerical grading scale 0 – 5, where 0 is fail

Person responsible:
Seppo Alanko

Working life cooperation:
No work placement period

Compulsory

761310A-01: Wave motion and optics, lectures and exam, 0 op

Voimassaolo: 01.08.2017 -
Opiskelumuoto: Intermediate Studies
Laji: Partial credit
Vastuuysikkö: Field of Physics
Arvostelu: 1 - 5, pass, fail
Opettajat: Seppo Alanko
Opintokohteen kielet: Finnish
Leikkaavuudet:
766349A  Wave motion and optics     7.0 op
761114P  Wave motion and optics     5.0 op
761114P-01 Wave motion and optics, lectures and exam     0.0 op
761114P-02 Wave motion and optics, lab. exercises     0.0 op
766329A  Wave motion and optics     6.0 op
761104P  Wave Motion             3.0 op

Ei opintojaksokuvauksia.

761310A-02: Wave motion and optics, lab. exercises, 0 op

Voimassaolo: 01.08.2017 -
Opiskelumuoto: Intermediate Studies
Laji: Partial credit
Vastuuysikkö: Field of Physics
Arvostelu: 1 - 5, pass, fail
Opettajat: Seppo Alanko
Opintokohteen kielet: Finnish
Leikkaavuudet:
766349A  Wave motion and optics     7.0 op
761114P  Wave motion and optics     5.0 op
761114P-01 Wave motion and optics, lectures and exam     0.0 op
761114P-02 Wave motion and optics, lab. exercises     0.0 op
766329A  Wave motion and optics     6.0 op
761104P  Wave Motion             3.0 op

Ei opintojaksokuvauksia.
555225P: Basics of industrial engineering and management, 5 op

**Voimassaolo:** 01.01.2014 -

**Opiskelumuoto:** Basic Studies

**Laji:** Course

**Vastuuysikkö:** Field of Industrial Engineering and Management

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Jukka Majava

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- ay555225P Basics of industrial engineering and management (OPEN UNI) 5.0 op
- 555221P Introduction to Production 2.0 op
- 555220P Basic Course in Industrial Engineering and Management 3.0 op

**ECTS Credits:**
5 ECTS credits.

**Language of instruction:**
Finnish. English material is also used.

**Timing:**
Periods 1-2.

**Learning outcomes:**
Upon completion of the course, the student will be able to:

- describe what industrial engineering and management (or operations management) means
- explain the core concepts of business operations and utilise these concepts in describing and analysing operations of an organisation
- explain in general terms the factors that affect economic performance of organisations
- utilise the terminology used in industrial engineering and management (operations management), describe the financial processes of companies and based on this describe the use of cost accounting in organisational decision-making
- calculate unit costs in various simplified settings, calculate various alternatives, as well as perform planning and goal oriented calculations based on given data, and draw conclusions based on the calculation results

**Contents:**
Operations and productivity, operations strategy, forecasting, accounting and cost accounting, investments and financial planning, sustainability, capacity management, location decisions, layout strategies, human resources management, supply chain management, subcontracting, inventory management, production planning, MRP & ERP, production scheduling, Just-in-Time & Lean operations, maintenance.

**Mode of delivery:**
The tuition will be implemented as blended teaching (web-based teaching and face-to-face teaching).

**Learning activities and teaching methods:**
Web-based lectures 20 h / exercises 18 h / self-study 96 h.

**Target group:**
Industrial Engineering and Management students and other students taking Industrial Engineering and Management as minor.

**Prerequisites and co-requisites:**
No prerequisites exist.

**Recommended optional programme components:**
This course is part of the 25 ECTS module of industrial engineering and management that also includes 555285A Project management, 555242A Product development, 555264P Managing well-being and quality of working life, and 555286A Process and quality management.

**Recommended or required reading:**

**Assessment methods and criteria:**
This course utilises continuous assessment. During the course, there are nine mandatory weekly assignments. At least half of the assignments must be passed.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Adjunct professor Jukka Majava

**Working life cooperation:**
-

**Other information:**
Substitutes courses 555220P Basic Course in Industrial Engineering and Management 3 ECTS cr and 555221P Introduction to Production 2 ECTS cr.

030005P: Information Skills, 1 op

**Opiskelumuoto:** Basic Studies  
**Laji:** Course  
**Vastuuysikkö:** Faculty of Technology  
**Arvostelu:** 1 - 5, pass, fail  
**Opettajat:** Ursula Heinikoski  
**Opintokohteen kielet:** Finnish  

**Leikkaavuudet:**  
030004P Introduction to Information Retrieval 0.0 op  

**ECTS Credits:**
1 ECTS credits  

**Language of instruction:**
Finnish  

**Timing:**
Architecture 3. spring semester, period I; biochemistry 3. autumn semester; biology 3. autumn semester, period I; chemistry 3. autumn semester, period II; computer science and engineering 2. spring semester, period IV; electrical engineering 3. spring semester, period III; geosciences 2. spring semester, period IV; geography 1. and 3. spring semester, period III; industrial engineering and management 3. year; information processing sciences 1. year; mathematics and physics 1. spring semester; mechanical engineering 3. year; mining engineering and mineral processing 3. year; process and environmental engineering 1. year, period I. Master's degree students in Industrial Engineering and Management 1st year.

**Learning outcomes:**
Upon completion of the course, the students:  
- can search scientific information,  
- can use the most important databases of their discipline,  
- know how to evaluate search results and information sources,  
- can use the reference management tool

**Contents:**
Scientific information retrieval process, the most important databases and publication channels of the discipline, evaluation of the reliability of information sources and RefWorks reference management tool.

**Mode of delivery:**
Blended teaching: classroom training, web-based learning material and exercises, a group assignment.

**Learning activities and teaching methods:**
Training sessions 8 h, group working 7 h, self-study 12 h
Target group:
Compulsory for all bachelor degree students of Faculty of information technology and electrical engineering, Faculty of Technology, Oulu mining school, Oulu School of architecture and Faculty of science. Optional for students of biochemistry. Compulsory also for the Master's degree students in Industrial Engineering and Management who have not earlier studies in information skills.

Prerequisites and co-requisites:
-

Recommended optional programme components:
-

Recommended or required reading:
Web learning material Tieteellisen tiedonhankinnan opas http://libguides.oulu.fi/tieteellinentiedonhankinta

Assessment methods and criteria:
Passing the course requires participation in the training sessions and successful completion of the course assignments.

Grading:
pass/fail

Person responsible:
Ursula Heinikoski

Working life cooperation:

901044Y: Second Official Language (Swedish), Written Skills, 1 op

Voimassaolo: 01.08.2014 -
Opiskelumuoto: Language and Communication Studies
Laji: Course
Vastuuysikkö: Languages and Communication
Opintokohteen kielet: Swedish
Leikkaavuudet:

901060Y Second Official Language (Swedish), Written Skills 1.0 op

Proficiency level:
B1/B2/C1 (Common European Framework of Reference)

Status:
This course is compulsory to all students except those who have at least 60 ECTS credits of Swedish studies in their degrees. The language proficiency provided by the course unit is equivalent to the language proficiency required of a state official with an academic degree working in a bilingual municipality area (Act 424/03 and Decree 481/03).
According to the requirements of the law, the student must be able to use Swedish both orally and in writing in various professional situations. Achieving this kind of proficiency during a course unit that lasts for only one semester requires that the student has already achieved the necessary starting proficiency level prior to taking the course.
This course includes also 901045Y Second Official Language (Swedish) Oral Skills, 1 ECTS credits.

Required proficiency level:
The required starting proficiency level for students of all faculties is a grade of 7 or higher from the Swedish studies at secondary school (B-syllabus) or equivalent knowledge AND a passing grade from the proficiency test held at the beginning of the course unit. Based on this proficiency test the students are directed to brush up on their language skills if it is deemed necessary; mastering basic vocabulary and grammar is a prerequisite to achieving the necessary language proficiency for the various communication situations one faces in professional life.
If a student has not completed Swedish studies (B-language) at secondary school with a grade of 7 or higher, or his/her language skills are otherwise lacking, he/she must achieve the required proficiency level BEFORE taking this compulsory Swedish course.

**ECTS Credits:**
2 ECTS credits

**Language of instruction:**
Swedish

**Timing:**
Student of Students of Industrial Engineering and Management: autumn semester of the 2nd year of studies
Students of Process Engineering and Environmental Engineering: autumn or spring semester of the second year of studies
Mechanical Engineering: autumn or spring semester of the third year of studies

**Learning outcomes:**
Upon completion of the course unit the student should be able to read and understand texts from his/her academic field and make conclusions based on them. The student should be able to write typical professional emails and short reports. He/she should be able to carry himself/herself according to Swedish etiquette when acting as host or guest. The student should also be able to discuss current events and special field-specific matters, use the vocabulary of education and plan and give short oral presentations relating to his/her own field.

**Contents:**
Communicative oral and written exercises, which aim to develop the student's Swedish proficiency in areas relevant to his/her academic field and future professional tasks. The student practises oral presentation and pronunciation. Situational exercises done individually and in pairs and groups. Discussions in small groups. Current texts about the student's special field. Written exercises relating to the student's professional field. Practising presentation skills.

**Mode of delivery:**
Contact teaching

**Learning activities and teaching methods:**
1 x 90 minutes of contact teaching per week and self-directed study, 53 hours per course.

**Target group:**
See Timing

**Prerequisites and co-requisites:**
See Required Proficiency Level

**Recommended optional programme components:**
-

**Recommended or required reading:**
Study material will be provided by the teacher.

**Assessment methods and criteria:**
The course unit focuses on improving both oral and written language skills and requires active attendance and participation in exercises, which also require preparation time. 100% attendance is required. The course unit tests both oral and written language skills. Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
Oral and written language proficiencies are tested separately and assessed using the so called KORU-criteria (publication of HAMK University of Applied Sciences, 2006). Separate grades will be awarded for the successful completions of both oral and written portions of the course unit: the possible passing grades are satisfactory skills and good skills (see language decree 481/03). The grades are based on continuous assessment and testing.

**Person responsible:**
See contact teachers on the Language and Communication home page [http://www.oulu.fi/languagesandcommunication/student_counselling](http://www.oulu.fi/languagesandcommunication/student_counselling)

**Working life cooperation:**
-
Other information:
Students sign up for teaching in WebOodi. Sign up only to a course 901044Y Second Official Language (Swedish) Written Skills, 1 ECTS credits. A student can only sign up for one teaching group. When signing up, it is imperative that the student fills in his/her university email address (paju.oulu.fi), major subject and Swedish grades attained during secondary education in the Further Information field. Information in sign-up periods and course unit timetables can be found in WebOodi.

901045Y: Second Official Language (Swedish), Oral Skills, 1 op

Voimassaolo: 01.08.2014 -
Opiskelumuoto: Language and Communication Studies
Laji: Course
Vastuuyksikkö: Languages and Communication
Opintokohteen kielet: Swedish
Leikkaavuudet:
901061Y Second Official Language (Swedish), Oral Skills 1.0 op

465101A: Introduction to materials for mechanical engineering, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Nousiainen, Olli Pekka
Opintokohteen kielet: Finnish
Leikkaavuudet:
465061A-01 Materials Engineering I, examination 0.0 op
465061A-02 Materials Engineering I, design exercise 0.0 op
465061A-03 Materials Engineering I, laboratory exercise 1 0.0 op

465061A-05 Materials engineering I, laboratory exercise 3 0.0 op
465061A Materials Engineering I 5.0 op

ECTS Credits:
5 ects/135 hours study time

Language of instruction:
Finnish

Timing:
Lectures and laboratory works, 3 and 4 periods

Learning outcomes:
The aim of the course is to introduce the common physical (metallurgical) phenomena in metal alloys and other construction materials. He/she understands the effect of different microstructural features on the mechanical properites and the processibility of the above mentioned materials. Finally, he/she is familiar with typical non-destructive and destructive testing techniques in material science.

Contents:
Solidification and phase transformations, plastic deformation, static recovery and recrystallization, effect of microstructure on mechanical properties of metal alloys, typical corrosion mechanisms, fatigue in metal alloys, creep in metal alloys, and non-destructive and destructive material testing.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
32 hours lectures/12 hours laboratory exercises/91 hours independent studies. Three laboratory exercises are included in the course.

Prerequisites and co-requisites:
None

Recommended or required reading:
Lecture booklet (in Finnish). Other material will be announced at the beginning of the course.

Assessment methods and criteria:
Final exam. The final grade is based on the final exam.

Grading:
Numerical grading scale 1 - 5. Laboratory exercises will be graded as "pass"/"fail".

Person responsible:
Olli Nousiainen

464101A: Machine drawing and CAD, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Tapio Korpela
Opintokohteen kielet: Finnish
Leikkaavuudet:

464051A  Machine Drawing  3.5 op
464051A-01  Machine Drawing, examination  0.0 op
464051A-02  Machine Drawing, exercise  0.0 op
464052A  CAD  3.5 op

ECTS Credits:
5 ects / 133 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures, Autumn periods 1.-2. Exercises, periods 1. - 2., and practical work, period 2.

Learning outcomes:
The aim of the course is to teach students to read and to draw machine drawings and to carry out standard specifications of description methods, legends and dimensioning. Students also learn how to use the computer system for modeling and drafting machine parts and assemblies.

Contents:
Purpose of machine drawing; Description and dimensioning of parts; Design and viewpoints of manufacturing; Specifications of welds and surface roughness and tolerances on drawings; Principles of diagrammatic drawings. Machine parts and assembly modeling and making drawings with computer aided design software.

Mode of delivery:
Face-to-face

Learning activities and teaching methods:
Lectures 30 h / exercises 30 h / computer aided design exercises 20 h / practical work 53 h. Drawing and Modeling exercises will be group exercises and practical work will be individual.
**Target group:**
1st year mechanical engineering students

**Recommended or required reading:**
Pere, A.: Koneenpiirustus1 & 2, Kirpe Oy, Espoo. Other literature will be informed on lectures.

**Assessment methods and criteria:**
Final exam 60%, exercises 30% and practical work 30% of the final grade.

**Grading:**
Numerical grading scale 1-5 / fail

**Person responsible:**
University lecturer Tapio Korpela

---

**461102A: Statics, 5 op**

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Field of Mechanical Engineering

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Lahtinen, Hannu Tapio

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- ay461102A Statics (OPEN UNI) 5.0 op
- 461016A-01 Statics, examination 0.0 op
- 461016A-02 Statics, exercises 0.0 op
- 461016A Statics 5.0 op

**ECTS Credits:**
5 ECTS / 149 hours of work

**Language of instruction:**
Lectures in finnish, foreign students follow the course by reading independently the books in english and taking part to the exercises and exams where all material is given in english.

**Timing:**
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 1st autumn semester.

**Learning outcomes:**
After the course, the student can calculate forces and moments of loaded structures using equations of vector algebra and trigonometry. He/she can draw a free body diagram of the force system and then solve the unknown forces by using equations of equilibrium. He/she can determine resultants from uniformly distributed loads and apply Coulomb's law of friction in the problem equilibrium. The student can solve problems of internal and external forces of particle systems and rigid body systems in case of static equilibrium. Especially, he/she can draw shear force and bending moment diagrams for beam structures.

**Contents:**
Fundamental laws and concepts in statics. Force systems and their treatment. Equilibrium of particles and rigid bodies. Static forces in isostatic structures such as beams, frames, cables and trusses. Friction.

**Mode of delivery:**
Implemented as Face-to-face -teaching.

**Learning activities and teaching methods:**
Lectures 55 h / exercises 42 h / independent work of solving homework problems 52 h.

**Target group:**
Compulsory for candidate degree students of mechanical engineering programme.

**Prerequisites and co-requisites:**
Now prerequisites required.

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**

**Assessment methods and criteria:**
In the course acceptable homework and midterm exams / final exam are required. This course utilizes continuous assessment. There are four midterm exams, of which the last one is at the same time a final exam. Homework contain every week three problems that are marked. The student is allowed to participate to a final exam, when the homework is accepted.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
University teacher Hannu Lahtinen

**Other information:**
The course gives ability for understanding static equilibrium, ability for determining force balance in structures and readiness for later studies.

**461103A: Strength of materials I, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Lahtinen, Hannu Tapio
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 461010A-01 Strength of Materials I, examination 0.0 op
- 461010A-02 Strength of Materials I, exercises 0.0 op
- 461010A Strength of Materials I 7.0 op

**ECTS Credits:**
5 ECTS / 149 hours of work

**Language of instruction:**
Lectures in Finnish, foreign students follow the course by reading independently the books in English and taking part to the exercises and exams where all material is given in English.

**Timing:**
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 1st spring semester.

**Learning outcomes:**
After the course, the student can determine stresses and strains of structures under loading. He/she can change the general stress and strain states from one coordinate system to another and can also apply constitutive equations in calculations. The student can dimension typical structures such as tension and compression bars, torsion bars and straight beams.

**Contents:**

**Mode of delivery:**
Implemented as Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures 55 h / exercises 42 h / independent work of solving homework problems 52 h.

**Target group:**
Compulsory for Bachelor's degree students of mechanical engineering programme.

**Prerequisites and co-requisites:**
The recommended preceding course is 461102A Statics.

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**

**Assessment methods and criteria:**
In the course acceptable homework and midterm exams / final exam are required. This course utilizes continuous assessment. There are four midterm exams, of which the last one is at the same time a final exam. Homework contain every week three problems that are marked. The student is allowed to participate to a final exam, when the homework is accepted.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
University teacher Hannu Lahtinen

**Other information:**
The course looks into the most important principal concepts of strenght of materials and gives ability for dimensioning of simple structures such as straight bars in tension, compression or torsion loads and straight beams under bending moments.

**463101A: Introduction to manufacturing technology, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Jouko Heikkala
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
463052A-01 Introduction to Manufacturing Technology, examination 0.0 op
463052A-02 Introduction to Manufacturing Technology, exercises 0.0 op
463052A Introduction to Manufacturing Technology 5.0 op

**ECTS Credits:**
5 ECTS

**Language of instruction:**
Finnish

**Timing:**
Lectures and exercises periods 3. - 4.

**Learning outcomes:**
The aim of this course is to give students a general view of manufacturing methods. The primary emphasis of the course is on the cutting methods of metals. Upon completion of the course, the student is able to name the key areas of manufacturing technology and the most important cutting methods. In addition, the
student is able to choose the applicable cutting methods and tools for achieving the basic manufacturing tolerances. The student is able to explain the basic features of the most common materials of cutting tools.

Contents:
The course includes 10 hours lectures, an examination and practical exercises of metal cutting in the laboratory.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises

Recommended or required reading:
Ihalainen, E., Aaltonen, K., Aromäki, M., Sihvonen, P.: Valmistustekniikka, Otatieto Oy, Helsinki 2007, 490 s. Supplementary material will be given during the lectures.

Assessment methods and criteria:
Exam and exercises are graded 1-5. Half of the final grade is based on the grade of the exercises and another half of the final grade is based on the grade of the exam.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Heikkala

461011A: Strength of Materials II, 7 op

Voimassaolo: - 31.07.2021
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Laukkanen, Jari Jussi
Opintokohteen kielet: Finnish
Leikkaavuudet:

ECTS Credits:
5 ects /135 hous of work

Language of instruction:
Finnish

Timing:
Lectures and exercises take place during the periods 1 - 2.

Learning outcomes:
The aim of this course is to provide students with a general view of the different areas concerning the strength of materials. Learning outcomes: Upon completion of the course, the student should be able to use the basic methods of fatigue strength estimation and fracture mechanics to estimate the life of simple structures. He/she is also able to solve the problem concerning the buckling of columns and beam columns. Moreover, the student is able to solve the problem of the bending of curved beams and free and warping torsion of beams.

Contents:
Basic methods of fatigue strength estimation; Basics of fracture mechanics; Buckling of columns and beam columns; Bending of curved beams; Free and warping torsion;

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
This course will be based on lectures 45 h and exercises 45 h and 45 h self-study during periods 1 - 2 and will have a final exam or mid-term exams.

**Prerequisites and co-requisites:**
Statics and Strength of Materials I

**Recommended or required reading:**

**Assessment methods and criteria:**
Midterm exams or one final exam is required. After the passed exercises a student is allowed to take part in an exam.

**Grading:**
Numerical grading scale 1-5.

**Person responsible:**
University Teacher Jari Laukkanen

461106A: Dynamics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish
Leikkaavuudet:
  461018A-01 Dynamics, examination 0.0 op
  461018A-02 Dynamics, exercises 0.0 op
  461018A Dynamics 4.0 op

**ECTS Credits:**
5 ECTS credits / 120 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the spring semester, during periods 1 and 2. It is recommended to complete the course at the 2st spring semester.

**Learning outcomes:**
The aim of this course is to provide students with the ability to examine the relationship between the forces on a solid body and the resulting motion, position, speed and acceleration of the body. Learning outcomes:
Upon completing the required coursework, the student knows and is able to explain the fundamental quantities and the base laws of the classical mechanics. He/she is able to choose an appropriate coordinate system and analyze the motion - position, velocity, and acceleration - of the parts of a device. The student is able to draw a free body diagram of a moving system, and compose and derive the equations of motion for a system using the direct momentum method, the work-energy method, and the impulse-momentum method.

**Contents:**
Introduction; Kinematics of a particle; Plane kinematics of a rigid body; Kinetics of a particle;. Basics of mechanical vibrations; Kinetics of a system of particles; Plane kinetics of a rigid body.

**Mode of delivery:**
Face-to-face teaching
Learning activities and teaching methods:  
Lectures 45 h / Exercise 30 h / Self-study 45 h.

Recommended optional programme components:  
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:  

Assessment methods and criteria:  
This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and theses homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:  
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:  
University Lecturer Hannu Koivurova

464102A: Design of machine elements, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Tapio Korpela
Opintokohteen kielet: Finnish
Leikkaavuudet:
   464055A  Machine Design I     8.0 op
   464055A-01 Machine Design I, examination 0.0 op
   464055A-02 Design exercise  0.0 op
   464055A-03 Design exercise I, home exercises 0.0 op
   462033A  Machine Design      7.0 op

ECTS Credits:
10 ects / 267 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures and exercises arranged at autumn periods 1 -2., practical work end of 2 period.

Learning outcomes:
Upon completion of this course, the student will know operating principals, material selection and dimensioning of machine elements. Learning outcomes: Upon completion of this course, the student is able to measure dimensions of the machine elements.

Contents:
Joint elements (screws, welds, etc.); Rotating machine elements (shafts, bearings, clutches, brakes); Power transmission elements (gears, chains, belts, etc.); Basics of needed vibration isolation to ensure smooth operation of machines

Mode of delivery:
Face-to-face teaching.
Learning activities and teaching methods:
Lectures 60 h / exercises 14 h / practical work 120 h / individual studies 73 h.

Target group:
2nd year mechanical engineering student

Prerequisites and co-requisites:
Machine Drawing and CAD

Recommended or required reading:

Assessment methods and criteria:
Final Exam, homeworks and practical work. Final exam is 50% and practical work 50% of final grade. Homeworks will be graded pass/fail.

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
University lecturer Tapio Korpela

461105A: Technical thermodynamics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Lahtinen, Hannu Tapio
Opintokohteen kielet: Finnish
Leikkaavuudet:
461035A Heat and Mass Transfer I 3.5 op

ECTS Credits:
5 ETCS / 120 hours of work

Language of instruction:
Lectures in finnish, foreign students follow the course by reading independently the books in english and taking part to the exercises and exams where all material is given in english.

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 2nd autumn semester.

Learning outcomes:
After the course, the student can explain the principal laws of thermodynamics and their impact on energy conversions. He/she can apply the energy balance equations for closed and open systems in the calculation of properties and path functions of different processes. The student can explain the theoretical foundations of combustion engines, gas and vapor power plants, and refrigerators and heat pumps. In addition, he/she can solve problems regarding fluid flow in pipes and heat and moisture transfer.

Contents:
Heat and moisture transfer and fluid flow in pipes; Principal laws in thermodynamics and basic concepts involved; Applications in production, transformation, transfer and use of energy.

Mode of delivery:
Implemented as Face-to-face-teaching.

Learning activities and teaching methods:
Lectures 30 h / exercises 30 h / independent work of solving homework problems 60 h.

Target group:
Compulsory for candidate degree students of mechanical engineering programme.

Prerequisites and co-requisites:
Now prerequisites required.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The course is passed by midterm exams or by a final exam. During the course two midterm exams are arranged. Every week exercises are organized, and part of the exercise problems are left for independent work.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Hannu Lahtinen

Other information:
The course gives fundamental information of thermodynamics and its applications.

463102A: Manufacturing technology I, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Pirkola, Heikki Juhani
Opintokohteen kielet: Finnish

Leikkaavuudet:
463053A-01 Manufacturing Technology I, examination 0.0 op
463053A-02 Manufacturing Technology I, exe 0.0 op
463053A Manufacturing Technology I 3.5 op
463053A2 Manufacturing Technology I 5.0 op

ECTS Credits:
5 ects/135 hours of work

Language of instruction:
Finnish, can be completed in English as a book examination.

Timing:
Lectures and exercises take place during the spring periods III - IV.

Learning outcomes:
The objective of the course is to familiarize students with the fundamentals of the functions and manufacturing methods of an engineering workshop. In order to apply manufacturing technology, students must know the features of different alternatives and be able to make technically and economically correct choices and combinations. This course emphasizes practicality and a general view of production. After the course, the student is capable of explaining manufacturing functions and methods of an engineering workshop. He/she is able to select parts manufacturing methods, machining data, machine tools and tooling equipment. In addition he/she can evaluate the alternatives of production automation in manufacturing functions.

Contents:
Features of different machining methods and machine tools; Selection of a blank machining method and machine tool according to type of work piece, accuracy and volume of production; Costs and technological possibilities of different machining methods; A review of control techniques, programming, jigs and tools

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 40 h and exercises 55 h (10 h of guided teaching) are held during periods III and IV. The course will be passed with a final exam and exercises which need to be returned and accepted. The final grade is a combined result of exercises and a final exam.

**Prerequisites and co-requisites:**
463101A Introduction to Manufacturing Technology

**Recommended or required reading:**

**Assessment methods and criteria:**
Final exam. The final grade is based on the combined points from exercises (grading 0,4) and the final exam (grading 0,6).

**Grading:**
Numerical grading scale 1-5.

---

**465102A: Materials for mechanical engineering, 5 op**

**Voimassaolo:** 01.08.2016 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuyksikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Timo Kauppi
**Opintokohteen kielet:** Finnish

**Language of instruction:**
Finnish

**Timing:**
Lectures and materials selection exercise take place during the periods 1 and 2, autumn term.

**Learning outcomes:**
The objective of the course is to familiarize the student with basic matters concerning properties of metallic and non-metallic structural materials, the area within which the materials are in use, and the principles of materials selection. After the course, the student is able to classify different structural materials such as steels, cast irons, non-ferrous metals, polymer based materials and structural ceramics. The student masters structural materials and their selection so that he/she is able to select the most proper structural material for a product or component.

**Contents:**
Common structural materials in mechanical engineering, including steels (structural, QT, tool, stainless), cast irons, non-ferrous metal alloys (aluminium, titanium, magnesium, copper, nickel) and polymer based materials (structural plastics, plastics composite, elastomers, rubbers). Materials selection taking into account different demands. Ashby diagrams.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
The course is made up of lectures (32 h) and a materials selection exercise in small group during the periods 1 and 2.

**Prerequisites and co-requisites:**
Recommended: 465101A Introduction to Materials for Mechanical Engineering.

**Recommended or required reading:**
Lecture booklet (in Finnish); Exercise materials

**Assessment methods and criteria:**
The final grade is based on the combined points from materials selection exercise (0.2) and exam (0.8).

**Grading:**
Numerical grading scale 1-5 / fail.

**Person responsible:**
Olli Nousiainen

**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Liedes, Toni Mikael
**Opintokohteen kielet:** Finnish

**ECTS Credits:**
5 cr / 133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 2nd spring semester.

**Learning outcomes:**
Upon completion of the course, the student will be able to explain how the information technology is utilized in modern machines. The student is able to describe how the modern machines are developed from purely mechanical systems to multi-disciplinary systems. The student is able to sort out the electrical, information technological and mechanical features of modern machines. He/she is also able to describe the interaction and interfaces of the aforementioned features. In addition to this, the student is able to separate the digital and analog domains. The student is able to create a simple computer program for machine control. He/she is able to name the sensors and actuators being used in automated machines. Furthermore, the student is able to list examples of machines taking advantage of modern information technology.

**Contents:**
History of mechanical engineering and information technology; Information technology as an enabler of the development of machines; Requirements and boundary conditions for automatisation of machines;
Concepts of information technology and electronics; Basics of programming and logical reasoning; Examples of machine applications taking advantage of modern information technology.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures 20 h / Group work 12 h / Self-study 101 h

**Target group:**
Bachelor's degree students of mechanical engineering

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**
Lecture notes. Other material is in the beginning of the course.

**Assessment methods and criteria:**
This course utilizes continuous assessment. During the course there are exercises and intermediate exams. The exercises and the exams will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Noppa Study Portal.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Lecturer Toni Liedes

**462103A: Introduction to Maintenance, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Jouni Laurila
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 464087A-01 Maintenance Technology, examination 0.0 op
- 464087A-02 Maintenance Technology, exercise work 0.0 op
- 464087A Maintenance Technology 5.0 op

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during period 1. It is recommended to complete the course at the 3rd autumn semester.

**Learning outcomes:**
Upon completion of the course, the student will be able to explain the most important terms related to the field of maintenance, define what the maintenance is and to tell how it affects on productivity, safety and environment. After the course, the student is able to calculate the most important factors and indicators related to the reliability and classify maintenance actions to corrective and predictive operations. In addition, he/she knows how the maintenance must to take into consideration during different planning tasks.

**Contents:**
The basic concepts, objectives and effects of the maintenance
Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 32 h / group work 20 h / self-study 83 h

Target group:
Bachelor's degree students in the mechanical engineering

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:
Lecture handout and the other material delivered during the course. Supplementary readings: Järviö, J. et al., Kunnossapito. Helsinki, KP-Media Oy / Kunnossapitoyhdistys ry 2007.

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Lecturer Toni Liedes

ECTS Credits:
5 ECTS credits.

Language of instruction:
Finnish. English material is also used.

Timing:
Periods 3-4.

Learning outcomes:
Upon completion of the course, the student will be able to:
- explain the basic terms of occupational safety and health
- assess the importance of occupational safety, health and well-being at work
- assess the significance of occupational safety in the improving of productivity and quality
- apply different safety analysis
- explain core issues of occupational safety and health management

Contents:
Occupational safety and health, safety management, safety culture, laws and standards, hazards and risks, occupational diseases and work accidents, safety analysis, occupational safety at shared industrial work sites, occupational safety card, HSEQ-assessment procedure, other current issues.

Mode of delivery:
The tuition will be implemented as face-to-face teaching.

Learning activities and teaching methods:
Lectures and assignments 26 h / group work 40 h / self-study 68 h.

**Target group:**
Industrial Engineering and Management, Mechanical Engineering, Process Engineering and Environmental Engineering students.

**Prerequisites and co-requisites:**
- 

**Recommended optional programme components:**
- 

**Recommended or required reading:**
Mertanen V. 2015. Työturvallisuuden perusteet. Helsinki: Työterveyslaitos. Lecture materials. Other materials will be defined during the course.

**Assessment methods and criteria:**
The grading is based on the exam (50 % of the grade) and exercises (50 % of the grade).

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
MSc Henri Jounila

**Working life cooperation:**

- ay555285A Project management (OPEN UNI) 5.0 op
- 555282A Project Management 4.0 op
- 555280P Basic Course of Project Management 2.0 op

**ECTS Credits:**
5 ECTS credits.

**Language of instruction:**
Finnish. English material may also be used.

**Timing:**
Period 2.

**Learning outcomes:**
Upon completion of the course, the student will be able to:
- describe explain the essential concepts and methods related to project management
- apply project management methods to create a schedule for a project and calculate critical path
understand essential concepts related to project cost management and able to apply earned value method and three point estimate to manage project costs

recognises the essential tasks of project risk management

Contents:
Defining project management, project goals and objectives, project phases and project life-cycle management, project planning, organising and scope management, schedule management, cost management, earned value calculation and project risk management, project stakeholder management, project communications management, the role of project manager, new modes of project delivery

Mode of delivery:
The tuition will be implemented as web-based teaching.

Learning activities and teaching methods:
Web-based lectures 16h, self-study 118h

Target group:
Industrial Engineering and Management students and other students taking Industrial Engineering and Management as minor.

Prerequisites and co-requisites:
No prerequisites exist.

Recommended optional programme components:
This course is part of the 25 ECTS module of Industrial engineering and management that also includes 555225P Basics of industrial engineering and management, 555242A Product development, 555264P Managing well-being and quality of working life, and 555286A Process and quality management.

Recommended or required reading:
Lecture material, exercise book, Artto, Martinsuo & Kujala 2006. Projektiliiketoiminta. WSOY

Assessment methods and criteria:
Assignments, exercise book and exam. The course grading is based on the exam. Well completed assignments and exercise book may raise grading.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Assistant professor Kirsi Aaltonen

Working life cooperation:
The course includes guest lectures from industry

Other information:
Substitutes courses 555280P Basic Course of Project Management + 555282A Project Management.

462021A-02 Machine Automation I, exercise work  0.0 op  
462021A Machine Automation I  5.0 op  
464064A Actuators  5.0 op  

ECTS Credits:  
5 cr / 133 hours of work  

Language of instruction:  
Finnish  

Timing:  
The course is held in the autumn semester, during periods 3 and 4. It is recommended to complete the course at the 2nd spring semester.  

Learning outcomes:  
Upon completion of the course, the student will be able to explain the role of actuators in a typical machine automation system. The student is able to recognize various kinds of actuators and is able to classify them according to performance and usability. In addition to this, the student is able to design a simple hydraulic drive and is he/she is able to select a suitable actuator for a typical automation application. Furthermore, the student is able to assess actuator sensing needs and preconditions to work as a part of automation system.  

Contents:
Basics actuators; Basics of hydraulics, Pneumatics and electrical drives; Performance and efficiency of actuators; Hydraulic actuators; Pneumatic actuators; Electrical actuators.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures 32 h / Group work 16 h / Self-study 85 h

**Target group:**
Bachelor's degree students of mechanical engineering

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**
Lecture notes. Other material is in the beginning of the course.

**Assessment methods and criteria:**
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Leikkaavuudet:**
- 464056A Machine Design II 6.0 op
- 464056A-01 Machine Design II, examination 0.0 op
- 464056A-02 Design II, exercise 0.0 op
- 464062S Engineering Design 20.0 op

**ECTS Credits:**
5 ects / 133 hours of studying work.

**Language of instruction:**
Finnish, can be completed in English as a book examination

**Timing:**
Lectures spring period 3 and 4.

**Learning outcomes:**
Upon completion of this course, the student is able, as a member of a design group, to design an entire machine, explain material selections and answer for meaning to be responsible of dimensioning of machine elements. Student is also able to design new product or essentially improve old product. Student knows what is required when working as a part of a product development project.

**Contents:**
Advanced machine design, design of assemblies and design methods. Utilization of Automation and new materials. Meaning of a machine directive.

**Mode of delivery:**
Face-to-face teaching.
Learning activities and teaching methods:
Lectures 40 h / practical work 93 h.

Target group:
3rd year mechanical engineering students

Prerequisites and co-requisites:
Design of machine elements, Machine drawing and CAD.

Recommended or required reading:

Assessment methods and criteria:
Final Exam and practical work. Final exam is 50% and practical work 50% of final grade

Grading:
Numerical grading scale 1-5 / fail

464061A-02 Techniques of Creative Work, design exercise 0.0 op
464085A Patenting 3.5 op
464061A Techniques of Creative Working 3.0 op

ECTS Credits:
5 ects / 133 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures arranged autumn during period 1, Practical work during course.

Learning outcomes:
The objective of the course for the student is to learn to find problems in familiar environment, analyze them and implement mechanical engineering to solve the problems. Upon completion of the course, the student is able to convert a familiar condition to a problem requiring a technical solution and question existing solutions. The student is able to apply the most important methods of systematic creative working. Student can develop solution as far as it is protectable with patenting. The main emphasis is on patenting; how to protect valuable product design from imitation; and how to avoid infringement of competitors’ industrial property rights. Upon completion of the course, the student can explain conditions for a patentable design and compare patenting to other ways of protecting industrial rights and is able to make an application for patent. The student also knows employer’s and employee's rights in case of making an invention as an employee.
Contents:
Analyzing and abstracting of a problem; Connecting a problem to a larger context or its division to minor problems; Applying systematic methods to a defined problem. Product protection models and their use in competition; Comprehension and legitimacy of the protection by patent; Applying for patent and making an application for a patent; Applying for a patent in a foreign country; Situations involving a conflict; Patent legislation.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 30 h / practical work 60 h.

Target group:
Bachelor degree students of mechanical engineering

Recommended or required reading:
Copies of lecture material.

Assessment methods and criteria:
Final exam and practical work. Both are 50% of final grade.

Grading:
Numerical grading scale 1-5 / fail

   461033A-01 Finite Element Methods I, examination  0.0 op
   461033A-02 Finite Element Methods I, exercises  0.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 1. - 2.

Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:
The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:
Face-to-face teaching.
Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-2. The course can be passed either by completing two midterm exams or a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

462104A: Machine automation, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Louhisalmi, Yrjö Aulis
Opintokohteen kielet: Finnish
Leikkaavuudet:
   462022S-01 Machine Automation II, examination  0.0 op
   462022S-02 Machine Automation II, exercise work  0.0 op
   462022S Machine Automation II  5.0 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completion of the course, the student will be able to explain the basic principles and structures of a typical machine automation system. The student is able to divide an automation system into basic elements and explain their role and significance in the system. The student can apply the basic digital technology and logic methods in designing a typical machine automation system. In addition to this, the student knows the operating principles of programmable logic controllers (PLCs) and is able to implement a logic control for a typical application. Furthermore, the student is able to explain the basic principles of fieldbuses.

Contents:
Basics of automation; Basics of digital technology and logic; Description of operation sequences; Architecture of programmable logic controllers and their programming; Distributed systems and fieldbuses.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Target group:
Bachelor's degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course:
Actuators in Machine Automation

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time. However, it is recommended to complete the course Machine Sensor Technology simultaneously.

Recommended or required reading:
Lecture notes. Other material is in the beginning of the course.

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Yrjö Louhisalmi

462107A: Maintenance of machines, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuypsikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouni Laurila
Opintokohteen kielet: Finnish
Leikkaavuudet:

464087A-01 Maintenance Technology, examination 0.0 op
464087A-02 Maintenance Technology, exercise work 0.0 op
464087A Maintenance Technology 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 3rd spring semester.

Learning outcomes:
Upon completion of the course, the student knows the different types of maintenance execution and can introduce what kind of points are connected to the choice of the maintenance strategy. The student knows the most common machine failure modes and consequences of them and can tell how the failures can be prevented. The student will recognize the effects of wearing and lubrication on the condition of machines and he/she is capable of explaining the basic concepts related to analysis of lubricants. The student knows the basics of the vibration measurement which are used in the condition monitoring of machines and can choose the suitable measuring and analysis methods for the identification of the most common machine faults. The student is familiar with the significance of maintenance in the productional operation and he/she is able to apply the most important standards of the maintenance field.

Contents:
Maintenance strategies and organizing methods, standards of this field, failure modes, wearing and lubrication, basics and the most general methods of machine condition monitoring

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 24 h / group work 36 h / self-study 75 h

**Target group:**
Bachelor's degree students in the mechanical engineering

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following course: 462103A Introduction to Maintenance

**Recommended optional programme components:**
The course is an independent entity

**Recommended or required reading:**

**Assessment methods and criteria:**
Final examination and the other graded assignments

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Jouni Laurila

**465104A: Heat treatment and welding of metals, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Timo Kauppi
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 465077A-01 Welding Technology, examination 0.0 op
- 465077A-02 Welding Technology, exercises 0.0 op
- 465077A Welding Technology 3.5 op

**ECTS Credits:**
5 cr; study time 135 h

**Language of instruction:**
Finnish

**Timing:**
Periods I-II, autumn term.

**Learning outcomes:**
After the course, the student is able to select the most suitable heat treatment process and to give the main characteristics of the heat treating parameters for achieving the required properties such as yield/tensile strength, ductility, toughness, surface hardness and/or fatigue strength. He/she is also able to explain the metallurgical phenomena occurring in a sample during heat treatment. In the area of welding technology, the student is able to explain the most essential principles and applications of the conventional welding and cutting processes. He/she is able to estimate weldability of different materials and to analyze the factors
affecting weldability. He can also explain the most essential matters regarding weld joint properties, weld defects and their inspection, and a healthy working environment. In addition, the student is generally able to take into account the effects of productivity and costs on the competitiveness.

Contents:
Heat treating and welding processes, their applicability.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures (32 h) will take place during period 3, and the three laboratory exercises in small groups will be during periods I – II. The final grade is based on the points from the final exam or small exams. The laboratory exercises will be graded as pass/fail.

Prerequisites and co-requisites:
465101A Introduction to Materials for Mechanical Engineering; 465102A Materials for mechanical Engineering.

Recommended or required reading:
Lecture booklet (in Finnish). Exercise materials.

Assessment methods and criteria:
Midterm exams or one final exam is required and accepted exercises.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Leinonen

ECTS Credits:
Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 3 and 4. It is recommended to complete the course at the 2nd spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to explain the role of actuators in a typical machine automation system. The student is able to recognize various kinds of actuators and is able to classify them according to performance and usability. In addition to this, the student is able to design a simple hydraulic drive and is he/she is able to select a suitable actuator for a typical automation application. Furthermore, the student is able to assess actuator sensing needs and preconditions to work as a part of automation system.

Contents:
Basics actuators; Basics of hydraulics, Pneumatics and electrical drives; Performance and efficiency of actuators; Hydraulic actuators; Pneumatic actuators; Electrical actuators.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor's degree students of mechanical engineering

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
Lecture notes. Other material is in the beginning of the course.

464056A-02 Design II, exercise 0.0 op
464062S Engineering Design 20.0 op

ECTS Credits:
5 ects / 133 hours of studying work.
Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures spring period 3 and 4.

Learning outcomes:
Upon completion of this course, the student is able, as a member of a design group, to design an entire machine, explain material selections and answer for meaning to be responsible of dimensioning of machine elements. Student is also able to design new product or essentially improve old product. Student knows what is required when working as a part of a product development project.

Contents:
Advanced machine design, design of assemblies and design methods. Utilization of Automation and new materials. Meaning of a machine directive.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40 h / practical work 93 h.

Target group:
3rd year mechanical engineering students

Prerequisites and co-requisites:
Design of machine elements, Machine drawing and CAD.

Recommended or required reading:

Assessment methods and criteria:
Final Exam and practical work. Final exam is 50% and practical work 50% of final grade

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
Professor Juhani Niskanen

464061A-02 Techniques of Creative Work, design exercise  0.0 op
464085A Patenting  3.5 op
464061A Techniques of Creative Working  3.0 op

ECTS Credits:
5 ects / 133 hours of studying work.
Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures arranged autumn during period 1, Practical work during course.

Learning outcomes:
The objective of the course for the student is to learn to find problems in familiar environment, analyze them and implement mechanical engineering to solve the problems. Upon completion of the course, the student is able to convert a familiar condition to a problem requiring a technical solution and question existing solutions. The student is able to apply the most important methods of systematic creative working. Student can develop solution as far as it is protectable with patenting. The main emphasis is on patenting; how to protect valuable product design from imitation; and how to avoid infringement of competitors' industrial property rights. Upon completion of the course, the student can explain conditions for a patentable design and compare patenting to other ways of protecting industrial rights and is able to make an application for patent. The student also knows employer's and employee's rights in case of making an invention as an employee.

Contents:
Analyzing and abstracting of a problem; Connecting a problem to a larger context or its division to minor problems; Applying systematic methods to a defined problem. Product protection models and their use in competition; Comprehension and legitimacy of the protection by patent; Applying for patent and making an application for a patent; Applying for a patent in a foreign country; Situations involving a conflict; Patent legislation.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 30 h / practical work 60 h.

Target group:
Bachelor degree students of mechanical engineering

Recommended or required reading:
Copies of lecture material.

Assessment methods and criteria:
Final exam and practical work. Both are 50% of final grade.

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
Professor Juhani Niskanen

Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jussi Paavola
Opintokohteen kielet: Finnish

ECTS Credits:
5 ects/135 hours study time

Language of instruction:
Finnish

Timing:
Lectures and laboratory works, 3. and 4. periods

Learning outcomes:
After the course, the student is able to apply his/her knowledge of corrosion when analyzing possibilities of corrosion in certain environments. In addition, he/she is able to classify corrosion modes occurring in different metals and to select a suitable corrosion protection method for iron based metals.

Contents:
Corrosion mechanisms in metal alloys and corrosion protection techniques of metal alloys.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
32 hours lectures/ 4 hours laboratory exercises/99 hours independent studies. A laboratory exercise is included in the course.

Recommended or required reading:
Lecture booklet (in Finnish). Other material will be announced at the beginning of the course.

Assessment methods and criteria:
Final exam. The final grade is based on the final exam.

Grading:
Numerical grading scale 1 - 5. A laboratory exercise will be graded as "pass"/"fail".

Lectures and laboratory works, 2. period

Learning outcomes:
This course gives an introduction to the broad spectrum of experimental techniques used in materials research, excluding materials testing. The principles, advantages and limitations of the various methods and their field of applications are described. Upon completing of the required coursework, the student can explain the structure, functioning and contrast formation as well as factors affecting the resolution of various metal microscopes. He/she is also able to explain the concepts of the thermal analysis, dilatometry, and magnetic and electrical measurements and list typical applications for these techniques and methods.

**Contents:**
Optical microscopy, scanning electron microscope (SEM), microanalysis techniques (EDS and WDS), atom force microscopy, dilatometry, thermal analysis techniques, magnetic measurement techniques, surface analysis techniques, and bulk analysis techniques.

**Mode of delivery:**
Face-to face teaching

**Learning activities and teaching methods:**
32 hours lectures/ 12 hours laboratory exercises/91 hours independent studies. Three laboratory exercises are included in the course.

**Recommended or required reading:**
Lecture booklet (In Finnish). Other material will be announced at the beginning of the course.

**Assessment methods and criteria:**
Lecture booklet (In Finnish). Other material will be announced at the beginning of the course.

**Grading:**
Numerical grading scale 1 - 5

**Person responsible:**
Olli Nousiainen

---

**465103A: Principles of metal shaping and forming, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Jari Larkiola

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 465095A-01 Sheet Metal Forming 0.0 op
- 465095A-02 Sheet Metal Forming, literature review 0.0 op
- 465095A Sheet Metal Forming 3.5 op

**ECTS Credits:**
5 / 135 h total study time

**Language of instruction:**
Finnish

**Timing:**
Autumn semester, periods I & II. Recommended for third study year.

**Learning outcomes:**
The object is to get students to understand the fundamentals of theory of plasticity. After course, student should have a readiness to apply theory of plasticity to metal forming analyses and to solve the simple stress distributions based on external loads.

**Contents:**
During course, common constitutive material models for different metals are examined. Processing methods effecting to the microstructure like rolling, forging, extrusion and wire drawing are included in course as like the sheet metal forming processes. In addition, e.g. the information from tensile tests is combined to the theory of plasticity and constitutive material models.

**Mode of delivery:**
Face to face

**Learning activities and teaching methods:**
Lectures, literature study and examination

**Target group:**
Compulsory in the Bachelor's stage for all Mechanical Engineering students majoring in Materials Engineering.

**Prerequisites and co-requisites:**
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering

**Recommended or required reading:**
Lecture notes, Korhonen, A. and Larkiola, J., Ohutlevyjen muovauksen perusteet, Actaoulu C1 2012, 207p

**Assessment methods and criteria:**
Final grade assessed on the basis of a final examination (weighting 0.8) and literature work (weighting 0.2).

**Grading:**
Examination scale 0-5 ja literature work 0-2. Grade 0 fail.

463105A: Casting techniques, 8 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Jouko Heikkala
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 463065A-01 Manufacturing of plastic products, examination 0.0 op
- 463065A-02 Manufacturing of plastic products, exercise work 0.0 op
- 463058A-01 Foundry Technology, examination 0.0 op
- 463058A-02 Foundry Technology, exercises 0.0 op
- 463058A-03 Foundry technology, laboratory exercise 0.0 op
- 463058A Foundry Technology 3.5 op
- 463065A Manufacturing of Plastics Products 3.5 op

**ECTS Credits:**
8 ECTS

**Language of instruction:**
Finnish

**Learning outcomes:**
The aim of the course is to give the students basic information concerning casting processes in manufacturing and how they are applied to different kinds of production and materials and also what those methods require for product design. After completing the course the student can estimate which kinds of products are possible and profitable to make by casting. The student can name the main principles of common casting methods and how those methods suit to different kinds of products, materials and various sizes. The student knows the most common metallic and plastic materials and the suitable casting methods for those. The student can also explain the main steps of the process plan and casting system design.
Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises.

Recommended or required reading:
Peter Beeley: Foundry Technology 719 p. Supplementary material will be given during the lectures.

Assessment methods and criteria:
Examination and exercises are graded 1-5. The final grade is determined 30% by the exercises and 70% by the examination.

Grading:
Numerical grading scale 1-5.

462102A: Machine automation actuators, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Louhisalmi, Yrjö Aulis
Opintokohteen kielet: Finnish

Leikkaavuudet:

462021A-01  Machine Automation I, examination  0.0 op
462021A-02  Machine Automation I, exercise work  0.0 op
462021A  Machine Automation I  5.0 op
464064A  Actuators  5.0 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 3 and 4. It is recommended to complete the course at the 2nd spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to explain the role of actuators in a typical machine automation system. The student is able to recognize various kinds of actuators and is able to classify them according to performance and usability. In addition to this, the student is able to design a simple hydraulic drive and is he/she is able to select a suitable actuator for a typical automation application. Furthermore, the student is able to assess actuator sensing needs and preconditions to work as a part of automation system.

**Contents:**
Basics actuators; Basics of hydraulics, Pneumatics and electrical drives; Performance and efficiency of actuators; Hydraulic actuators; Pneumatic actuators; Electrical actuators.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures 32 h / Group work 16 h / Self-study 85 h

**Target group:**
Bachelor's degree students of mechanical engineering

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**
Lecture notes. Other material is in the beginning of the course.

**Assessment methods and criteria:**
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
University teacher Yrjö Louhisalmi

**462104A: Machine automation, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies

- 462022S-02 Machine Automation II, exercise work 0.0 op
- 462022S Machine Automation II 5.0 op

**ECTS Credits:**
5 cr / 133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

**Learning outcomes:**
Upon completion of the course, the student will be able to explain the basic principles and structures of a typical machine automation system. The student is able to divide an automation system into basic elements and explain their role and significance in the system. The student can apply the basic digital...
technology and logic methods in designing a typical machine automation system. In addition to this, the student knows the operating principles of programmable logic controllers (PLCs) and is able to implement a logic control for a typical application. Furthermore, the student is able to explain the basic principles of fieldbuses.

Contents:
Basics of automation; Basics of digital technology and logic; Description of operation sequences; Architecture of programmable logic controllers and their programming; Distributed systems and fieldbuses.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor's degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course: Actuators in Machine Automation

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time. However, it is recommended to complete the course Machine Sensor Technology simultaneously.

Recommended or required reading:
Lecture notes. Other material is in the beginning of the course.

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Yrjö Louhisalmi

Arvostelu: 1 - 5, pass, fail
Opettajat: Liedes, Toni Mikael
Opintokohteen kielet: Finnish
Leikkaavuudet:

462053A Sensor Technology of Machine Automation 5.0 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completion of the course, the student will be able to identify, classify and bring into use the most common sensor types used in machine automation. The student is able to choose sensors for typical automation applications. In addition to this, the student is able to design a common analog and digital signal transmission and conditioning chain.

Contents:
- Basics measuring systems
- Classification of sensors
- Characteristics of analog and digital domain
- Analog to digital conversion
- Basics of analog signal conditioning: amplification, attenuation and filtering
- Operating principle of digital sensors
- Examples of typical sensors used in mechanical engineering and civil engineering

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor's degree students of mechanical engineering

462106A: Precision engineering, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Louhisalmi, Yrjö Aulis
Opintokohteen kielet: English
Leikkaavuudet:
- 462038A-01 Precision Engineering, examination 0.0 op
- 462038A-02 Precision Engineering, exercise work 0.0 op
- 462038A Precision Engineering 3.5 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
English

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 3rd or 4th spring semester.
Learning outcomes:
Upon completion of the course, the student can analyze structures and components used in precise engineering products, can explain working principles of them and can design new qualified and easily manufactured precise engineering products.

Contents:
Introduction, Housing and usability of devices, permanent and detachable joints, bearing and guidance design and on precise and micromechanical manufacturing methods.

Mode of delivery:
Blended teaching. The course is lectured in English, possible exercises are taught face to face. Final exam in English.

Learning activities and teaching methods:
The course consists of lectures and an exercise work and a final exam.

Target group:
Master's degree students of mechanical engineering

Recommended or required reading:

Assessment methods and criteria:
Final exam. The grade of the course is based on a final examination. The student must pass the exercise work before taking the examination.

Grading:
The course utilizes numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Yrjö Louhisalmi
Upon completion of this course, the student is able, as a member of a design group, to design an entire machine, explain material selections and answer for meaning to be responsible of dimensioning of machine elements. Student is also able to design new product or essentially improve old product. Student knows what is required when working as a part of a product development project.

Contents:
Advanced machine design, design of assemblies and design methods. Utilization of Automation and new materials. Meaning of a machine directive.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40 h / practical work 93 h.

Target group:
3rd year mechanical engineering students

Prerequisites and co-requisites:
Design of machine elements, Machine drawing and CAD.

Recommended or required reading:

Assessment methods and criteria:
Final Exam and practical work. Final exam is 50% and practical work 50% of final grade

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
Professor Juhani Niskanen
The student will recognize the effects of wearing and lubrication on the condition of machines and he/she is capable of explaining the basic concepts related to analysis of lubricants. The student knows the basics of the vibration measurement which are used in the condition monitoring of machines and can choose the suitable measuring and analysis methods for the identification of the most common machine faults. The student is familiar with the significance of maintenance in the productional operation and he/she is able to apply the most important standards of the maintenance field.

Contents:
Maintenance strategies and organizing methods, standards of this field, failure modes, wearing and lubrication, basics and the most general methods of machine condition monitoring

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 24 h / group work 36 h / self-study 75 h

Target group:
Bachelor's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following course: 462103A Introduction to Maintenance

Recommended optional programme components:
The course is an independent entity

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Jouni Laurila

521141P: Elementary Programming, 5 op

Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Computer Science and Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Mika Oja, Mika Rautiainen
Opintokohteen kielet: Finnish
Leikkaavuudet:
ay521141P Elementary Programming (OPEN UNI) 5.0 op

Voidaan suorittaa useasti: Kyllä

ECTS Credits:
5 ECTS Cr

Language of instruction:
Lectures and learning material are in Finnish. The course can be completed in English by self-studying from a book, completing assignments and exercises on the course learning environment, and delivering a final project.

Timing:
Fall, period 1. There is an option to extend the course to the 2nd period in cases where completing in one period doesn't fit the student's schedule.

Learning outcomes:
1. Is capable of solving problems in the computer's terms
2. Understands the basic concepts of programming
3. Knows the basics of the Python programming language
4. Is able to implement programs independently
5. Is able to use the internet to find information about programming

Contents:
Problem solving with programming, basic concepts of programming, writing Python code.

Mode of delivery:
Web-based teaching + face-to-face teaching

Learning activities and teaching methods:
30h of exercise groups, 105h self-studying in the web.

Target group:
1st year students of computer science and engineering, electrical engineering, medical and wellness technology and industrial and engineering management, 2nd year students of physics, and other students of the University of Oulu

Prerequisites and co-requisites:
None.

Recommended optional programme components:
The course provides a basis for subsequent programming courses.

Recommended or required reading:
Web material in an online learning environment. Address will be announced at the beginning of the course.

Assessment methods and criteria:
The course is completed by passing all learning assignments, programming exercises and a final exercise project. Read more about assessment criteria at the University of Oulu webpage

Grading:
pass/fail.

Person responsible:
Mika Oja

- 460116A-01 Introduction to Construction Engineering, examination 0.0 op
- 460116A-02 Introduction to Construction Engineering, exercise work 0.0 op
- 460116A Introduction to Building Construction 3.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work
Language of instruction:
Finnish
Timing:
Spring, periods 3-4
Learning outcomes:
After completing the course students can describe the construction process, different parties of a construction project and their role in the project. Students can also explain how laws and legislation affects the construction, design and production of building structures. They can describe the material properties of the most common construction materials. They can also explain the certification process of a building material or product and the environmental legislation in construction.
Contents:
The following topics are covered during the course: Construction law and legislation. Different phases of a construction project. The raw materials, production and properties of the most common construction materials and products. Quality assurance and certification of building products. Environmental declarations. Life cycle assessment.
Mode of delivery:
Lecture room teaching.
Learning activities and teaching methods:
Lectures and exercises
Target group:
Students studying structural engineering
Recommended or required reading:
Lecture material. Land use and building legislation. The National Building Code of Finland
Assessment methods and criteria:
Passed practical works and exam
Grading:
The course utilizes a numerical grading scale 1-5. Numerical scale zero stands for a fail
Person responsible:
University teacher Hannu Liedes

466102A: Introduction to structural design, 3 - 5 op
Introduction to Structural Design

5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Autumn semester, periods 1-2

Learning outcomes:
After completing the course the student is able to name technical regulations and instructions, which guide construction. After completing the course students can explicate principle of verifications and plastic theory on structure design and also different loads on structure. Student estimate design loads by calculation and design load effect in structures. Student can describe different structure and bracing systems.

Contents:
Regulations and supervising. The principle of design verification. The loads and effect. The principle of using of eurocode. The principle of plastic theory on on structure design. Structure systems. The joints of structures.

Mode of delivery:
Lecture room teaching.

Learning activities and teaching methods:
Lectures and exercises

Target group:
Students studying structural engineering

Prerequisites and co-requisites:
461016A Statics and 460101A Strength of Materials I

Recommended or required reading:
Lecture notes (mainly in Finnish), Finnish law and legislation, National building code of Finland, Eurocode standards

Assessment methods and criteria:
Passed practical works and exam

Grading:
Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:
University teacher Hannu Liedes

466103A: Project work in structural engineering, 5 op
**Laji:** Course  
**Vastuuysikkö:** Field of Mechanical Engineering  
**Arvostelu:** 1 - 5, pass, fail  
**Opettajat:** Antti Niemi  
**Opintokohteen kielet:** Finnish  
**Leikkaavuudet:**  
485109A Numerical methods in structural engineering 5.0 op

**ECTS Credits:**  
5 ECTS credits / 132 hours of work

**Language of instruction:**  
Finnish

**Timing:**  
Spring semester, periods 3-4

**Learning outcomes:**  
Ability to develop relevant structural designs and calculations using modern computational tools. Ability to present the results of the design both orally and in writing. Knowledge of the properties of different structural models from the viewpoint of structural dimensioning. Understanding of the fundamentals of yield line theory. Ability to determine the plastic limit load of a slab using the yield line theory. Knowledge of the special features of curved shell structures and their implications for structural design.

**Contents:**  

**Mode of delivery:**  
Face-to-face

**Learning activities and teaching methods:**  
Lectures, exercises and self study

**Target group:**  
Students studying structural engineering

**Prerequisites and co-requisites:**  
466101A Introduction to building construction, 466102A Introduction to structural design, 461107A Finite Element Methods I, 461108A Mechanics of materials

**Recommended or required reading:**  
The course material will be distributed during the lectures

**Assessment methods and criteria:**  
Homework and exercises

**Grading:**  
Numerical grading scale 1-5. Grade 0 stands for a fail.

**Person responsible:**  
senior research fellow Antti Niemi

**Arvostelu:** 1 - 5, pass, fail  
**Opettajat:** Tuomela, Anne Marika, Kauko Kujala, Ali Torabi Haghighi  
**Opintokohteen kielet:** Finnish
ECTS Credits:
5 ECTS / 135 hours of work

Language of instruction:
Finnish and option complete in English

Timing:
The course unit is given in the spring semester, during period 1

Learning outcomes:
Have a clear understanding of mechanical behaviour of soil structures in loading and environmental conditions. Understand design and dimensioning principles and can explain environmental aspects of soil behaviour.

Contents:
Origins and composition of soils, classification of soils, stress and strains in soils, mechanical properties of soils, stability of slopes, bearing capacity of foundation, seepage analyses, freezing and thawing of soils, site investigations and in situ testing.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures (40 h) and calculation exercises (20 h) also independent work (75 h)

Target group:
Students in Bachelor program of Environmental Engineering

Prerequisites and co-requisites:
No

Recommended optional programme components:
-

Recommended or required reading:
Lecture handout and other materials delivered in lectures

Assessment methods and criteria:
Examination
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Professor Kauko Kujala

Working life cooperation:

461107A: Finite Element Methods I, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Lumijärvi, Jouko Veikko Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:
461033A Finite Element Methods I 3.5 op
461033A-01 Finite Element Methods I, examination 0.0 op
ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 1. - 2.

Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:
The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-2. The course can be passed either by completing two midterm exams or a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II.

Recommended or required reading:
Lecture notes (in Finnish), N. Ottosen & H. Petersson: Introduction to the Finite Element Method,
Vol. 1: Basic Formulation and Linear Problems.

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

461108A: Mechanics of materials, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.
Learning outcomes:
Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to apply the theory of the strength of materials to different kind of design problems needed in engineering mechanics. He/she understand the fundamental concepts of mechanics of deformable solids; including static equilibrium, geometry of deformation, and material constitutive behavior. He/she can discuss the basic mechanical principles underlying modern approaches for modelling of various types of materials under a different type of loadings. This provide students with exposure to the systematic methods for solving engineering problems in solid mechanics. He/she can also build the necessary theoretical background for further structural analysis and design courses.

Contents:
The general equations of mechanics. The stress and strain state. Different material models; Linear elastic material, isotropic, transverse-isotropic and orthotropic material models. The concept of strain energy. Theory of plasticity. Yield criterion, plastic flow rule and hardening. Limit state design. Introduction to viscoelastic material and creep theory.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 30 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and theses homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

Opintokohteen kielet: Finnish

Leikkaavuudet:

462021A-01 Machine Automation I, examination 0.0 op
462021A-02 Machine Automation I, exercise work 0.0 op
462021A Machine Automation I 5.0 op
464064A Actuators 5.0 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 3 and 4. It is recommended to complete the course at the 2nd spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to explain the role of actuators in a typical machine automation system. The student is able to recognize various kinds of actuators and is able to classify them according to performance and usability. In addition to this, the student is able to design a simple hydraulic drive and is he/she is able to select a suitable actuator for a typical automation application. Furthermore, the student is able to assess actuator sensing needs and preconditions to work as a part of automation system.

Contents:
Basics actuators; Basics of hydraulics, Pneumatics and electrical drives; Performance and efficiency of actuators; Hydraulic actuators; Pneumatic actuators; Electrical actuators.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor's degree students of mechanical engineering

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
Lecture notes. Other material is in the beginning of the course.

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Yrjö Louhisalmi

461107A: Finite Element Methods I, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Lumijärvi, Jouko Veikko Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:

461033A  Finite Element Methods I       3.5 op
461033A-01 Finite Element Methods I, examination       0.0 op
461033A-02 Finite Element Methods I, exercises       0.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 1. - 2.

Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:
The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-2. The course can be passed either by completing two midterm exams or a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

461109A: Finite element methods II, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Lumijärvi, Jouko Veikko Juhani
Opintokohteen kielet: Finnish

Leikkaavuudet:

461034A  Finite Element Methods II       3.5 op
461034A-01 Finite Element Methods II, examination       0.0 op
461034A-02 Finite Element Methods II, exercises       0.0 op
ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 3. - 4.

Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM in dynamic and buckling analyses and the preparedness to use commercial FE-programs. After this course, the student can explain the basic idea of the FEM in the case of two- and three dimensional, geometrically complicated structures. In addition to the linear displacement and heat transfer problems, he/she is able to critically utilize the ready to use FEM-programs in the analysis of buckling-, modal- and dynamic problems. Also, the student knows the basic types of nonlinearity and recognizes their effect on the computations.

Contents:
Shell and solid elements. Buckling and modal analyses. Dynamic analyses. An introduction to the nonlinearities.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 3.-4. The course can be passed by completing a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II, Finite Element Methods I.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

461108A: Mechanics of materials, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish
Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to apply the theory of the strength of materials to different kind of design problems needed in engineering mechanics. He/she understand the fundamental concepts of mechanics of deformable solids; including static equilibrium, geometry of deformation, and material constitutive behavior. He/she can discuss the basic mechanical principles underlying modern approaches for modelling of various types of materials under a different type of loadings. This provide students with exposure to the systematic methods for solving engineering problems in solid mechanics. He/she can also build the necessary theoretical background for further structural analysis and design courses.

Contents:
The general equations of mechanics. The stress and strain state. Different material models; Linear elastic material, isotropic, transverse-isotropic and orthotropic material models. The concept of strain energy. Theory of plasticity. Yield criterion, plastic flow rule and hardening. Limit state design. Introduction to visco elastic material and creep theory.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 30 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

464103A: Machine design, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Niskanen, Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:
464056A Machine Design II 6.0 op
464056A-01 Machine Design II, examination 0.0 op
464056A-02 Design II, exercise 0.0 op
464062S Engineering Design 20.0 op

ECTS Credits:
5 ects / 133 hours of studying work.
Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures spring period 3 and 4.

Learning outcomes:
Upon completion of this course, the student is able, as a member of a design group, to design an entire machine, explain material selections and answer for meaning to be responsible of dimensioning of machine elements. Student is also able to design new product or essentially improve old product. Student knows what is required when working as a part of a product development project.

Contents:
Advanced machine design, design of assemblies and design methods. Utilization of Automation and new materials. Meaning of a machine directive.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40 h / practical work 93 h.

Target group:
3rd year mechanical engineering students

Prerequisites and co-requisites:
Design of machine elements, Machine drawing and CAD.

Recommended or required reading:

Assessment methods and criteria:
Final Exam and practical work. Final exam is 50% and practical work 50% of final grade

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
Professor Juhani Niskanen

031022P: Numerical Analysis, 5 op

Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Applied Mathematics and Computational Mathematics
Arvostelu: 1 - 5, pass, fail
Opettajat: Marko Huhtanen
Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS credits / 135 hours of work

Language of instruction:
Finnish. English speaking students should contact the instructor.
The course can be completed in English by intermediate exams or by a final exam.

Timing:
Spring semester, period 3

Learning outcomes:
Knows numerical algorithms for solving basic problems in computing. Knows basics about numerical linear algebra and some of its applications. Knows how nonlinear systems are solved and how they appear in optimization. Knows how differential equations are solved numerically.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h / Group work 22 h / Self-study 85 h.

Target group:
-

Prerequisites and co-requisites:
Completion of courses Calculus I and II, a course on Differential Equations and a Course on Linear Algebra.

Recommended optional programme components:
-

Recommended or required reading:
Material posted on the web-page of the course.

Assessment methods and criteria:
Intermediate exams or a final exam.

Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Marko Huhtanen

463103A: Quality in production and dimensional measurements, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
**Opettajat:** Pirkola, Heikki Juhani

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 463062S-01 Quality in prod, exam 0.0 op
- 463062S-02 Quality in Prod, exam 0.0 op
- 463062S Quality in Production 3.5 op

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during period 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

**Learning outcomes:**
Quality in Production is the supplementary course for the students graduating in the field of Functions of Management in Industry. The aim of this course is to understand the effects of a comprehensive quality control on the functions and costs of an enterprise and the principles of realization of quality assurance. Learning Outcomes: Upon completion of the course, the student is able to specify the concept of quality, explain the quality control in different phases of production and explain how it is possible to realize quality assurance by using different methods and principles of quality assurance. In addition, the student is able to explain the principle of quality system and to plan the quality system according to the requirements of quality standards. The student can explain the use of measuring instruments needed in workshop quality assurance.

**Contents:**
Concept of quality; TQC managing philosophy; Quality control in different phases of production; Quality costs; Methods of quality assurance; Quality system of a company; Quality policy in subcontracting; Quality circles.; SFS-ISO 9000 quality standards.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
The course consists of lectures (20h), exercises (10h), practical work (30h) and shelf-study (73h).

**Recommended or required reading:**

**Assessment methods and criteria:**
Final examination, the final grade is based on the combined points from the final exam (grade 0.7) and exercises (grade 0.3).

**Grading:**
Numerical grading scale 1-5.

**Person responsible:**
Heikki Pirkola

ECTS Credits:
7 cr / 187 hours of work

Language of instruction:
Finnish, the course can also be completed in English

Timing:
Organized during the autumn semester. Lectures and seminar during period 1, demonstrations and practical work during period 2.

Learning outcomes:
The student can apply laser machining processes, electrical discharge machining, abrasive water jet cutting and additive manufacturing processes in today's machine shops as well as choose suitable equipment for various applications. The student can also describe the main features, capabilities, limitations and trends of the aforementioned processes.

Contents:
Classes and seminars deal with the fundamentals and equipment of laser material processing, electrical discharge machining, abrasive water jet cutting and additive manufacturing processes. Other processes may be added as deemed suitable. Material interaction, process and equipment possibilities and limitations. Additionally, safety and health aspects of the processes are covered.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
The course consists of lectures and seminars 46h, preparation for the seminars 34h, demonstrations 10h, practical work as a group project 70h, final exam 3h and preparation for the exam 24h. The project work is flexible and enables realization of student-initiated project ideas.

Target group:
Mechanical engineering students in their Master's studies, 5th year.

Recommended optional programme components:
Production technology studies in general.

Recommended or required reading:

Assessment methods and criteria:
Final exam. The final grade is based on the combined points from the exam (0.4), seminar and practical work (0.6).

Grading:
1 to 5, zero denotes failure to pass.

Person responsible:
Jyri Porter

Other information:
The course objective is to familiriaze students especially with methods for manufacturing parts used in mechanical engineering. Methods covered in the course are alternative or supplementary to traditional manufacturing methods.

463105A: Casting techniques, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouko Heikkala
Opintohteen kielet: Finnish

Leikkaavuudet:
- 463065A-01 Manufacturing of plastic products, examination 0.0 op
- 463065A-02 Manufacturing of plastic products, exercise work 0.0 op
- 463058A-01 Foundry Technology, examination 0.0 op
- 463058A-02 Foundry Technology, exercises 0.0 op
- 463058A-03 Foundry technology, laboratory exercise 0.0 op
- 463058A Foundry Technology 3.5 op
- 463065A Manufacturing of Plastics Products 3.5 op

ECTS Credits:
- 8 ECTS

Language of instruction:
- Finnish

Learning outcomes:
The aim of the course is to give the students basic information concerning casting processes in manufacturing and how they are applied to different kinds of production and materials and also what those methods require for product design. After completing the course the student can estimate which kinds of products are possible and profitable to make by casting. The student can name the main principles of common casting methods and how those methods suit to different kinds of products, materials and various sizes. The student knows the most common metallic and plastic materials and the suitable casting methods for those. The student can also explain the main steps of the process plan and casting system design.

Mode of delivery:
- Face-to-face teaching.

Learning activities and teaching methods:
- Lectures and exercises.

Recommended or required reading:
Peter Beeley: Foundry Technology 719 p. Supplementary material will be given during the lectures.

Assessment methods and criteria:
- Examination and exercises are graded 1-5. The final grade is determined 30% by the exercises and 70% by the examination.

Grading:
- Numerical grading scale 1-5.

Person responsible:
- Jouko Heikkala

465104A: Heat treatment and welding of metals, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Timo Kauppi
Opintohteen kielet: Finnish

Leikkaavuudet:
- 465077A-01 Welding Technology, examination 0.0 op
ECTS Credits:
5 cr; study time 135 h

Language of instruction:
Finnish

Timing:
Periods I-II, autumn term.

Learning outcomes:
After the course, the student is able to select the most suitable heat treatment process and to give the main characteristics of the heat treating parameters for achieving the required properties such as yield/tensile strength, ductility, toughness, surface hardness and/or fatigue strength. He/she is also able to explain the metallurgical phenomena occurring in a sample during heat treatment. In the area of welding technology, the student is able to explain the most essential principles and applications of the conventional welding and cutting processes. He/she is able to estimate weldability of different materials and to analyze the factors affecting weldability. He can also explain the most essential matters regarding weld joint properties, weld defects and their inspection, and a healthy working environment. In addition, the student is generally able to take into account the effects of productivity and costs on the competitiveness.

Contents:
Heat treating and welding processes, their applicability.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures (32 h) will take place during period 3, and the three laboratory exercises in small groups will be during periods I – II. The final grade is based on the points from the final exam or small exams. The laboratory exercises will be graded as pass/fail.

Prerequisites and co-requisites:
465101A Introduction to Materials for Mechanical Engineering; 465102A Materials for mechanical Engineering.

Recommended or required reading:
Lecture booklet (in Finnish). Exercise materials.

Assessment methods and criteria:
Midterm exams or one final exam is required and accepted exercises.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Leinonen

462107A: Maintenance of machines, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouni Laurila
Opintokohteen kielet: Finnish
Leikkaavuudet:
464087A-01 Maintenance Technology, examination 0.0 op
464087A-02 Maintenance Technology, exercise work 0.0 op
464087A Maintenance Technology 5.0 op
ECTS Credits: 
5 ECTS credits / 133 hours of work

Language of instruction: 
Finnish

Timing: 
The course is held in the spring semester, during period 4. It is recommended to complete the course at the 3rd spring semester.

Learning outcomes: 
Upon completion of the course, the student knows the different types of maintenance execution and can introduce what kind of points are connected to the choice of the maintenance strategy. The student knows the most common machine failure modes and consequences of them and can tell how the failures can be prevented. The student will recognize the effects of wearing and lubrication on the condition of machines and he/she is capable of explaining the basic concepts related to analysis of lubricants. The student knows the basics of the vibration measurement which are used in the condition monitoring of machines and can choose the suitable measuring and analysis methods for the identification of the most common machine faults. The student is familiar with the significance of maintenance in the productional operation and he/she is able to apply the most important standards of the maintenance field.

Contents: 
Maintenance strategies and organizing methods, standards of this field, failure modes, wearing and lubrication, basics and the most general methods of machine condition monitoring

Mode of delivery: 
Face-to-face teaching

Learning activities and teaching methods: 
Lectures 24 h / group work 36 h / self-study 75 h

Target group: 
Bachelor's degree students in the mechanical engineering

Prerequisites and co-requisites: 
The recommended prerequisite is the completion of the following course: 462103A Introduction to Maintenance

Recommended optional programme components: 
The course is an independent entity

Recommended or required reading: 

Assessment methods and criteria: 
Final examination and the other graded assignments

Grading: 
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible: 
Jouni Laurila

Proficiency level:
-

Status:
This course unit is compulsory for students of Electrical Engineering, Computer Science, Communications Technologies and Engineering Mechanical Engineering, Process and Environmental Engineering.

Required proficiency level:
-

ECTS Credits:
2 credits

Language of instruction:
Finnish

Timing:
1st year: Process and Environmental Engineering
2nd year: Communications Technologies
3rd year: Geoscience; Mechanical Engineering; Electrical Engineering, Computer Science and Engineering Technologies

Mode of delivery:
Multimodal teaching

Learning activities and teaching methods:
Contact hours ca. 20 h and independent group work or self-study ca. 34 h.

Target group:

Prerequisites and co-requisites:
-

Recommended optional programme components:
-

Recommended or required reading:
Kauppinen, Anneli & Nummi, Jyrki & Savola, Tea: Tekniikan viestintä: kirjoittamisen ja puhumisen käsikirja (EDITA); Nykänen, Olli: Toimivaa tekstiä: Opas tekniikasta kirjoittaville (TEK) and material in Optima study environment.

Assessment methods and criteria:
Active participation in contact teaching, independent study and completion of given assignments. Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
Pass / fail

**Person responsible:**
Kaija Oikarainen
Toropainen, Outi

**Working life cooperation:**
-

**Other information:**
All students are required to attend the first meeting of the course unit so the work groups can be formed and work started in a timely and efficient manner. When signing up for the course unit, you should keep in mind that completing it requires a responsible attitude and a strong commitment to the work because the teamwork-based exercises rely heavily on the participation and activity of the students.

If the student is involved in the University's student associations or functions in a position of trust in university government, student union administration or Oulun Teekkarilyhdistys ry (or in its subordinate guilds), he/she may be relieved of some of the group communication exercises. These compensatory actions must always be agreed upon separately with the course unit's teacher. The student must present an official statement from a person in charge of the governing body or association, which details the student's tasks and involvement with that body or association. Participation that took place over five years ago does not entitle the student to any compensation.

469081A: Bachelor's Thesis / Mechanical Engineering, 8 op

**Voimassaolo:** 01.08.2007 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opintokohteen kielet:** Finnish

**ECTS Credits:**
8 ECTS

**Language of instruction:**
Finnish, can be written in English if needed.

**Timing:**
The end of Bachelor's studies

**Learning outcomes:**
Upon completion of the thesis the student can create a research plan, and define a research problem and research questions. She/He is able to manage her/his own work according to the project plan. The student can also utilize different information sources and critically evaluate the information obtained. The student is able to produce clear and finalized text, in line with technical and scientific writing practices.

**Contents:**
The student chooses the theme for the thesis in cooperation with his/her supervisor.

**Mode of delivery:**
The thesis is written towards the end of the BSc studies, typically during the third year.

**Learning activities and teaching methods:**
Independent work.

**Target group:**
Bachelor Students of Mechanical Engineering.

**Prerequisites and co-requisites:**
Basic and intermediate studies.
Recommended optional programme components:
Information Skills and Technical communication

Assessment methods and criteria:
BSc thesis and related maturity test.

Grading:
pass/fail

Person responsible:
The supervisor of Thesis

Working life cooperation:
Thesis' theme is often selected from the real research project or it is possible to do with industrial company.

469080A: The Maturity Test for Bachelor's Degree, 0 op

Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits:
0 ECTS

Language of instruction:
Finnish or Swedish.

Timing:
After completion of the bachelor's thesis.

Learning outcomes:
The student can produce mature text in popular form of the research field and thus show ones familiarity to the field.

Contents:
Depends on the topic of the thesis.

Mode of delivery:
Literary work.

Learning activities and teaching methods:
Exam

Target group:
Bachelor Students of Mechanical Engineering

Recommended or required reading:
Will be written after the Bachelor's Thesis has been submitted for review.

Assessment methods and criteria:
Student writes an essay in his/her native language about the topic of the Bachelor's thesis to show a good command of the language and the content of the thesis

Grading:
Pass or fail. Both the contents and language are assessed.

Person responsible:
Supervisor of Thesis

A460221: Module of the Option, Automotive Engineering, 39,5 op
464122A: Mobile hydraulics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jonne Untinen
Opintokohteen kielet: Finnish
Leikkaavuudet:
460076A Mobile Hydraulics 3.5 op

ECTS Credits:
5 ects cr/ 133 hours of student's work

Language of instruction:
Finnish

Timing:
Lectures and exercises during periods 1.-2.

Learning outcomes:
The objective of the course is to provide the students with a general idea of the design and dimensioning of hydraulic systems used in mobile machines. Upon completion of the course, the student is able to describe the basic circuits and characteristics in mobile hydraulics. The student can also describe the most important components and operational preconditions of the mobile hydraulic system. The student is able to design simple mobile hydraulic systems. Furthermore, the student is able to have discussions with the experts in the field of mobile hydraulics using relevant terminology. The student is also capable of dimensioning the simple hydraulic drivetrain systems.

Contents:
Applications of hydraulic systems in mobile machines; Fundamentals of proportional- and hydraulic technique; Components and their properties; Basics of design and dimensioning; Maintenance and safety of hydraulic systems. Basics of the digital valves and valve control systems.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
The course consists of lectures, exercises and exercise work. The grade is determined by the sum of examination and exercises. Lectures 20 hours, guided exercises 20 hours. 95 hours of student's independent work.

Prerequisites and co-requisites:
462104A Machine automation, 462109S Machine modelling and simulation

Recommended or required reading:
Assessment methods and criteria:
Final exam, The grade is determined by the sum of examination and exercises

Grading:
Numerical grading scale 1-5.

464121A: Automotive engineering principles, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:
   462050A-01 Automotive Engineering, examination 0.0 op
   462050A-02 Automotive Engineering, laboratory exercises 0.0 op
   462050A Automotive Engineering 5.0 op

ECTS Credits:
5 ECTS / 133 student work hours

Language of instruction:
Finnish

Timing:
Lectures and exercises during the periods 1. - 2.

Learning outcomes:
The goal of the course is to provide the student with basic concept of vehicle mechanics and mobility, motor vehicle regulations and technical inspections, structural systems of automotives, vehicle design principles, environmental effects of vehicles and exhaust gas emission treatment methods. The student is capable of identifying requirements of type approval and periodic technical inspections. The student will know the functions of steering, brake and electronic systems, axles and wheels support mechanisms. The student is capable of determining tires for vehicles and the force mechanism of pneumatic tire on road surface. He/she will know the provisions concerning exhaust gas emission limit values and measuring methods for motor vehicle and construction machines. The student is able to determine mobility maps and fuel consumption for on- and off road vehicles accordingly and is capable of determining the capacity of engine and transmission systems as well as steering geometry and performing technical measurements in automotive laboratories and road conditions.

Contents:
Road legislation for vehicles; Type approval; Periodic technical inspections; Structural systems of automotives; Driving resistances and mobility maps for on-road and off-road vehicles; Tire categories and standards; Force mechanism of pneumatic tire on road surface; Steering geometry of automotives; Engine and transmission systems; Automotive electrical systems; Fuel consumption; EU, EPA and apan exhaust gas emission legislation, Steering and drivetrain systems of the tracked Vehicles.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures (30 hours) and calculation exercises (20 hours). Automotive laboratory exercises will be performed in the OAMK automotive laboratory. Grades will be based on an exam, practical exercises and laboratory experiments. 83 hours of student's independent work

Recommended or required reading:
Additional literature:

Assessment methods and criteria:
Final exam, the final grade is based on the combined points from the exam (grade 0.5) and exercises (grade 0.5).

Grading:
Numerical grading scale 1-5.

460071A-01 Structural Systems in Automotive Vehicles I, examination 0.0 op
460071A-02 Structural Systems in Automotive Vehicles I, exercises 0.0 op
460071A Structural Systems in Automotive Vehicles I 5.0 op

ECTS Credits:
5 ects cr/133 hours of student's work

Language of instruction:
Finnish

Timing:
Lectures and exercises during periods 3.-4. Practical work and laboratory, periods 3.-4.

Learning outcomes:
The aim of this course is for the student to become familiar with the basic principles of designing automotive vehicles and construction machines, product development and maintenance. The student is able to design an automotive vehicle chassis, support mechanisms for axles and wheels, and a fastening mechanism for load structures. The student is capable of accounting for basic principles in railway vehicle design. In addition to this, the student is able to measure brake and transmission systems for automotive vehicles, determine load models and dynamic stability of automotive vehicles and construction machines. The student is capable of explaining the regulations and standards that need to be taken into account in automotive vehicles and construction machines design and dimensioning. The student is capable of planning maintenance for a life-cycle of a vehicle and performing technical measurements in automotive laboratories and road conditions.

Contents:
Chassis construction and dimensioning of automotive vehicles; Support and fastening mechanism of axles and load structures; Stability of tilting load structure, crane equipment and machinery; Rollover stability of container vehicles and busses; Support solutions for automotive tires; Power transmission systems for automotive vehicles; Steering systems of automotive vehicles; Automotive brake legislation; The basics of automotive braking; Braking systems of light- and heavy-duty vehicles and trailers combinations; Automotive electrical systems; Automotive technical measurements in automotive laboratories and road conditions

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures (40 hours) and calculation exercises (26 hours). Automotive laboratory exercises will be performed in the OAMK automotive laboratory. Grades will be determined by an exam, exercises and laboratory experiments. 67 hours of student’s independent work

**Prerequisites and co-requisites:**
464121A Automotive Engineering Principles

**Recommended or required reading:**
Lecture notes and the material will be handed out during the lectures. International vehicle and machinery regulations and directives will be used.

Additional literature:

**Assessment methods and criteria:**
The final grade is based on the combined points from the exam (grade 0.5) and exercises (grade 0.5)

**Grading:**
Numerical grading scale 1-5.

**Person responsible:**
Prof. Mauri Haataja

**ECTS Credits:**
10 ects cr/ 266 hours of student's work

**Language of instruction:**
Finnish

**Timing:**
Lectures and exercises during periods 1.2. Practical work and laboratory, periods 1.-2.

**Learning outcomes:**
The aim of this course is to familiarize the student with the product development of automotive vehicles and construction machines, dimension principles of vehicles and structural systems, driving stability of automotive vehicles, and railway vehicle technology. The student will learn how to perform measurements in automotive laboratories and based on road conditions. The student is capable of applying the methods of life cycle design and product development of automotive vehicles and construction machines. The student is able to determine the structure loads of machinery and endurance and is capable of designing steering and power transmission systems of automotive vehicles. The student is capable of dimensioning suspension and damping equipment for automotive vehicles and is capable of determining models of vehicle dynamics on road condition cases. Finally, the student is capable of determining driving stability.

**Contents:**
Suspension systems and basis of automotive vehicles and construction machines; Steering and power transmission systems of automotive vehicles; Modeling of vehicle dynamics of automotives and vehicle combinations; Automotive technical measurements in automotive laboratories; An industry design exercise assignment

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures (30 hours) and calculation exercises (18 hours) Automotive laboratory exercises will be performed in the OAMK automotive laboratory. 218 hours of Student's independent work. A designing assignment for automotive industry will be included in the course. Grades will be determined by an exam, exercises, designing assignment and laboratory experiments.

**Prerequisites and co-requisites:**
464121A Automotive Engineering  
464123S Structural Systems in Automotive Vehicles  
464122A Mobile Hydraulics  
462109S Simulation and modelling of machines

**Recommended optional programme components:**
464121A Automotive Engineering  
464123S Structural Systems in Automotive Vehicles  
464122A Mobile Hydraulics  
462109S Simulation and modelling of machines

**Recommended or required reading:**
Lecture notes and the material will be handed out during the lectures. Additional literature:

**Assessment methods and criteria:**
The final grade is based on the combined points from the exam (grade 0.5) and exercises (grade 0.5).

**Grading:**
Numerical grading scale 1-5.

**Person responsible:**
professor Mauri Haataja
ECTS Credits:
5 ects cr/ 133 hours of student's work

Language of instruction:
Finnish

Timing:
Lectures and exercises during periods 3.-4. Practical work and laboratory, periods 3.-4.

Learning outcomes:
The aim of the course is to provide students with general conception of vehicle and machinery engines, operating principles, main dimensioning methods, thermodynamic work cycles, environmental issues and maintenance. The other main aim of this course is to familiarize the student with experimental research methods in engine laboratory, measuring and data acquisition methods, measuring technology, systematic planning and implementation of measurements, discussion of experimental results, reporting and quality systems of laboratory measurements as well as product development activities. The student is capable of accounting for working principles of a piston engine. The student is able to explain mixture formation, factors affecting cylinder filling and burning processes, exhaust gas emission formation and methods of maintenance. The student is able to perform basic dimensioning of charged and naturally aspirated piston engines and thermodynamic calculations as well as draw up characteristic drawings. The student is capable of using international standards related to measurements of internal combustion engines and quality systems with expertise. The student is able to account for operating principles and requirements of engine load device, measuring device and data acquisition system. The student is able to draw up measuring plans, perform measurements, write measuring reports and perform a critical analysis of the results.

Contents:
Structural systems and basics of piston engines; Mixture formation and cylinder filling; Engine fuels; Exhaust gas emission formation; Ignition, fuel and control systems; Main dimensioning methods for piston engines; Theoretical work cycles and efficiencies; Charging methods; Technical measurements for engines Measuring and data acquisition systems of engine laboratory; Measurements of experimental room conditions; Engine braking units; Engine load cycles; Power; torque and speed of rotation; Measuring air quantity; Measuring fuel mass; Determining the air coefficient; Lambda sensor; Exhaust gas emission analyzers; Combustion pressure sensor of a cylinder; Experiments: determining engine load cycles; Characteristic fuel consumption with various loadings; Determining exhaust gas emissions with various tests cycles.; Testing exhaust gas catalytic converter; Reporting experimental measurements

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures (26 hours) and calculation exercises( 20 hours). The course consists of lectures and calculation exercises. There will also be exercises and laboratory experiments in the course. Engine technical measurements will be performed at the OAMK automotive vehicle and engine laboratory. Grades will be determined by an exam, exercises and laboratory experiments. 87 hours of student's independent work

Recommended or required reading:
Lecture notes and the material will be handed out during the lectures. Aumala; Mittaustekniikan perusteet. 359, Oatieto..1989. Bosch Automotive Handbook 8th edition, Robert bosch GmbH 2011
Additional literature:

Assessment methods and criteria:
The final grade is based on the combined points from the exam (grade 0.4) and exercises (grade 0.6).

**Grading:**
Numerical grading scale 1-5.

- 460074S-02 Internal combustion engines II, exercises 0.0 op
- 460074S Internal Combustion Engines II 5.0 op

**ECTS Credits:**
5 ects cr/ 133 hours of student's work

**Language of instruction:**
Finnish

**Timing:**
Lectures and exercises during periods 1.-2. Practical work and laboratory, periods 1.-2.

**Learning outcomes:**
The student will become familiar with mechanical dynamics and vibrations of piston engines and basis for dimensioning of mechanical elements of crankshaft mechanism. The student is capable of determining kinematics and characteristic drawings. The student will be familiar with mass, gas, tangential and bearing force diagrams. Student is able to determine balancing method of mass forces and vibration damping method of the crankshaft mechanism. In addition to this, the student is able to determine dimensions of machine elements and analyze them using methods applicable for engine design.

**Contents:**
The kinematics and kinetics of crankshaft mechanism; Gas, mass and bearing forces; Tangential force and torque; Mass forces balancing methods; Vibration mechanics of crank shaft mechanism; Dimensioning methods for machine elements of crank shaft mechanism; Analysis methods of piston engines

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures (40 hours) and calculation exercises (20 hours). The grades will be determined by an exam, exercises and laboratory experiments. 73 hours of student's independent work.

**Prerequisites and co-requisites:**
464124A Internal Combustion Engine

**Recommended or required reading:**
Assessment methods and criteria:
The final grade is based on the combined points from the exam (grade 0.5) and exercises (grade 0.5).

- 461019S-02 Mechanical Vibrations, exercises 0.0 op
- 461019S Mechanical Vibrations 6.0 op

ECTS Credits:
5 ects /135 hous of work

Language of instruction:
Finnish

Timing:
Lectures and exercises during the periods 3 - 4.

Learning outcomes:
The aim of this course is to familiarize students with the principles and phenomena of mechanical vibrations and show how different vibrations can be represented by a theoretical model and how detrimental vibrations can be avoided in structures and machines.
Learning outcomes: After the course, the student is capable of forming the equations of motion for a single and multi-degree-of-freedom systems and continuous models and is able to solve them using analytical, numerical and approximate methods. Moreover, the student is able to use finite element methods to solve basic vibration problems.

Contents:
Basic principles; Vibrations of single degree-of-freedom systems; Vibrations of multi-degree-of-freedom systems; Torsional vibration of a power drive chain; Longitudinal, transverse and torsional vibrations of a beam represented by a continuous model; Some approximation methods; Use of FEM in vibration analysis; Introduction to the theory of balancing; Experimental modal analysis.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
This course will be based on lectures 45 h and exercises 30 h and 45 h self-study during periods 3 – 4 and 15 h for a project work. Students are required to take a final exam or mid-term exams.

Prerequisites and co-requisites:
First year mathematics, Strength of Materials I & II and Dynamics.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final examination. The student must pass the exercises before taking the examination.

**Grading:**
Numerical grading scale 1-5.

**ECTS Credits:**
10 ects / 267 hours of studying work

**Language of instruction:**
Finnish, can be completed in English as a book examination
Timing:
Lectures and seminars arranged during autumn and spring periods 1.- 3.

Learning outcomes:
Upon completion of this course the students can describe the most common problems of the production machines and know the effects of machine constructions to quality and production. During the course papermachine is used as an example of production machines. After the course students can explain the importance of the pulp and paper industry to domestic economy and can describe the main stages of paper making processes.

Contents:
Fundamentals of production machine structures and their design criteria. Detailed design criteria of paper machine parts, calenders, rolls as well as construction materials.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 100 h / seminars 12 h / company excursions 30 h / individual studies 60 h.

Target group:
Master's degree students of mechanical engineering or process engineering

Recommended or required reading:
Copies of lecture material

Assessment methods and criteria:
Two midterm exams or one final exam is required and accepted seminar.

Grading:
Numerical grading scale 1-5 / fail

Leikkaavuudet:
464058S  Project Work in Machine Design  8.5 op
464084S  Project Work in Paper Machinery Construction  8.5 op

ECTS Credits:
10 ects / 267 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Work can be started during the lectures of the course Production Machine Design

Learning outcomes:
The aim of this course is to deepen the student's knowledge of constructions of production machines with the help of extensive exercise. Upon completion of the course, the student has realized a demanding research, development or design project from a topic given by the industry. After completion of the course, the student is able to analyze, develop or improve existing machine components or processes.

Contents:
Carrying out a wide industry based product development, research or design project.

**Mode of delivery:**
Individual project work.

**Learning activities and teaching methods:**
Project work is done in groups of 1 to 4 students depending on the size and requirements of the work.

**Target group:**
Master's degree students of mechanical engineering or process engineering

**Prerequisites and co-requisites:**
Machine Design or/and Production Machine Design

**Recommended optional programme components:**
Production Machine Design

**Recommended or required reading:**
Supplied according to needs

**Assessment methods and criteria:**
Accepted project work

**Grading:**
Numerical grading scale 1-5 / fail

**Person responsible:**

**ECTS Credits:**
5 ects / 133 hours of studying work.

**Language of instruction:**
Finnish, can be completed in English as a book examination

**Timing:**
Lectures and exercises arranged spring during periods 3.

**Learning outcomes:**
The aim of the course is to teach for students how the computer systems are used in different fields of mechanical machine design. After the course, the student is able to define what computer systems belong to the customer centered computer integrated manufacturing. He/she is able to explain what design knowledge is produced in these systems and what design knowledge is transferred between these systems. The student is able to use the CAD/CAM system used in the course in different fields of mechanical machine design.

**Contents:**
The course will focus on the use of computer systems in different fields of mechanical machine design. The emphasis is on the utilization of product data and the realization of product based design systems, where there is often a need to integrate many systems functionally together
Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 20 h / exercises 30 h / practical work 83 h

Target group:
4th year master degree student of mechanical engineering.

Prerequisites and co-requisites:

Recommended or required reading:

Assessment methods and criteria:
Final exam and practical work. Final exam will be 40% and practical work 60% of final grade.

Grading:

Leikkaavuudet:
  461036S-01  Heat and Mass Transfer II, examination  0.0 op
  461036S-02  Heat and Mass Transfer II, exercises  0.0 op
  461036S  Heat and Mass Transfer II  3.5 op

ECTS Credits:
5 ECTS credits / 105 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods I and II.

Learning outcomes:
The aim of this course is to familiarize students with the physical principles of heat transfer and fluid mechanics and their applications. Upon completing the required coursework, the student is able to design machines for the production, transfer and use of energy. Moreover, he/she is able to calculate the amount of loads the flow directs towards the structures. The above requires that the student is able to explain the fundamentals of fluid statics and calculate its applications. He/she can explain the characteristics of flowing fluid and the fundamental concepts of the flow mechanics. The student is able to use mass, momentum and energy conservation equations to solve engineering fluid mechanics problems in a controlled volume. The student is able to determine the frictional losses, piping size and pump power requirements for laminar and turbulent flow in closed conduits for viscous and inviscid fluids.

Contents:
Introduction, dimension analysis and its applications; Fluid statics: Equilibrium equations, pressure center, stability of a floating body; Fluid dynamics: inviscid and viscid incompressible flow, basics of compressible flow, use of numerical methods; Technical applications including flow in pipes, wind loads and wave loads. Introduction to computational fluid mechanics.
Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 45 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

462105A: Machine Sensor Technology, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies

Arvostelu: 1 - 5, pass, fail
Opettajat: Liedes, Toni Mikael
Opintokohteen kielet: Finnish
Leikkaavuudet:

462053A Sensor Technology of Machine Automation 5.0 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completion of the course, the student will be able identify, classify and bring into use the most common sensor types used in machine automation. The student is able to choose sensors for typical automation applications. In addition to this, the student is able to design a common analog and digital signal transmission and conditioning chain.

Contents:
Basics measuring systems; Classification of sensors; Characteristics of analog and digital domain; Analog to digital conversion; Basics of analog signal conditioning: amplification, attenuation and filtering; Operating principle of digital sensors; Examples of typical sensors used in mechanical engineering and civil engineering;

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor's degree students of mechanical engineering

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following courses prior to enrolling for the course:
Actuators in Machine Automation

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**

**Assessment methods and criteria:**
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Lecturer Toni Liedes

**465107A: Introduction to physical metallurgy, 5 op**

**Voimassaoho:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
Learning outcomes:
The aim of the course is to introduce common crystal structures in metal alloys. A student knows how to describe crystal planes and crystal directions of a cubic crystal structure using Miller indices. He/she also understands the interactions between x-ray radiation (or electronic beam) and metallic specimen. Finally, he/she is able to analyze data obtained from XRD, SEM/EBSD and TEM studies.

Contents:
Crystal structure, bonding types, reciprocal lattice, XRD, SEM/EBSD, and TEM.

Mode of delivery:
Face-to face teaching

Learning activities and teaching methods:
32 hours lectures/ 12 hours laboratory exercises/91 hours independent studies. Three laboratory exercises are included in the course.

Prerequisites and co-requisites:
465101A Introduction to materials for mechanical engineering and 465102A Materials for mechanical engineering.

Recommended or required reading:
Lecture booklet (In Finnish). Other material will be announced at the beginning of the course.

Assessment methods and criteria:
Final exam and final report. The final grade is based on the combined points from the exam (factor 0.7) and the report (factor 0.3).

Grading:
Numerical grading scale 1 - 5.

Person responsible:
Olli Nousiainen

465108S: Modelling of metal forming processes, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jari Larkiola
Opintokohteen kielet: Finnish

ECTS Credits:
5 / 135 h total study time

Language of instruction:
Finnish

Timing:
Autumn semester, periods I & II. Recommended for fourth study year.
Learning outcomes:
Students are initiated into physical models and computer aided modelling of metal forming processes. The object is to give students e.g. readiness of calculate forming forces during plastic deformations utilising simulation softwares.

Contents:
During course, several physical models for metal forming processes are examined and a strong focus is also in commercial simulation softwares like Abaqus and LS-Dyna. Experimental work is also included in course. In this work, student has to simulate metal forming process by utilising Abaqus or LS-Dyna software.

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures 32h, experimental work 20h and independent study 83 h

Target group:
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
465103A Principles of metal shaping and forming

Recommended or required reading:
Lecture notes

Assessment methods and criteria:
Accepted examination (weighting 0.7) and experimental work (weighting 0.3).

Grading:
Examination scale 0-5 ja literature work 0-2. Grade 0 fail.

465109S: Microstructural changes in metallic alloys, 7 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jukka Kömi
Opintokohteen kielet: Finnish
Leikkaavuudet:

465063S-01 Microstructural changes in metallic alloys, examination 0.0 op
465063S-02 Microstructural changes in metallic alloys, exercises 0.0 op
465063S Microstructural changes in metallic alloys 7.0 op
465082S-01 Physical Metallurgy II, examination 0.0 op
465082S-02 Physical Metallurgy II 0.0 op
465082S Physical Metallurgy II 7.0 op

ECTS Credits:
7 /189 h study time

Language of instruction:
Finnish

Timing:
Autumn semester period 2. Recommended for fourth year of studies.

Learning outcomes:
After completion of the course, the student will be able to apply basic thermodynamic and kinetic concepts to phase transformations. (S)he will be able to evaluate the effect of phase diagrams on the structure of metallic alloys. The student will be able to explain solidification and precipitation reactions in metallic alloys, and explain the phase transformations occurring during the decomposition of austenite during cooling.

Contents:

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures and calculation exercises 48 h / independent study 141 h.

Target group:
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

Recommended or required reading:

Assessment methods and criteria:
Final grade assessed on the basis of either continuous assessment or final examinations.

Grading:
Pass grades on a scale of 1-5. Grade 0 fail.

Person responsible:
Professor Jukka Kömi

465110S: Strength of metallic alloys, 7 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jukka Kömi
Opintokohteen kielet: Finnish
Leikkaavuudet:
   465064S  Strength of metal alloys  7.0 op
   465081S  Physical Metallurgy I  7.0 op

ECTS Credits:
7 ECTS /189 h study time

Language of instruction:
Finnish. A visiting lecturer will give a few lectures in English.

Timing:
Spring semester period 3. Recommended for fourth year of studies.

Learning outcomes:
After completion of the course, the student will know the most important phenomena occurring in metals under stress, understand the relationship between them and microstructure, and understand their effect on strength. (S)he will be able to rationalize the effects of stacking fault energy on dislocation character and motion. (S)he will be able to compare and justify the differences in strain hardening seen in different alloys.
The student will be able to explain the effects of grain size on static, fatigue and creep strength. (S)he will be able to explain how to determine fatigue and creep properties and list the most important factors affecting these properties. (S)he will be able to interpret Ashby's deformation maps. The student will be able to explain the most important concepts related to texture.

465111S: Welding metallurgy, 8 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Timo Kauppi
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 465080S-03 Welding Technology, seminar 0.0 op
- 465080S-01 Welding Metallurgy, examination 0.0 op
- 465080S-02 Welding Technology, exercise work 0.0 op
- 465080S Welding Metallurgy 8.5 op

**ECTS Credits:**
8 cr / study time 216 h

**Language of instruction:**
Finnish

**Timing:**
Lectures (48 h) during the period 3, laboratory exercise continues during the period 4.
Learning outcomes:
The course gives essential background information on the phenomena taking place in welding and their influence on microstructures and mechanical properties and also provides skills in select materials and welding methods. Learning outcomes: Upon completing of the required coursework, student is able to:
- explain the influence of welding conditions on temperature distribution and solidification morphology of a welded joint,
- classify typical microstructures present in the heat-affected zone of low carbon steel weldments,
- compare the importance of microstructure on mechanical properties of the joint, and
- explain the microstructure changes occurring in welding of alloyed steels, cast irons and non-ferrous metals and their influence on properties.
After the course the student also has skills to select a proper weldability test for estimating the risk of cold and hot cracking.

Contents:
Heat distribution in welded joints; Solidification and segregation; Microstructures of the heat-affected zone; Weldability: structural steels, low-alloyed steels, stainless steels, cast irons, nonferrous metals; Welding defects and weldability testing.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
This course consists of 48 hours of lectures during the 3rd period, a seminar and a laboratory exercise with reporting.

Prerequisites and co-requisites:
465104A Heat treatment and welding of metals

Recommended or required reading:

Assessment methods and criteria:
The final exam or midterm exams and the final grade is based on the exam (weight 0.8) and an exercise report (weight 0.2).

Grading:
Numerical grading scale 1-5.

465112S: Sheet metal forming, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jari Larkiola

Ei opintojaksokuvauksia.

465113S: Failure mechanisms in metals, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Nousiainen, Olli Pekka
Opintokohteen kielet: Finnish
Leikkaavuudet:
465079S  Failure Analysis  3.5 op

ECTS Credits:
5 ECTS/135 h study time

Language of instruction:
Finnish

Timing:
Spring semester, period 4. Recommended for fourth year of studies.

Learning outcomes:
After completion of the course, the student will be able to explain the effects of mechanical and environmental loads on the possible failure mechanisms in alloys. (S)he will be able to avoid unsuitable choices of materials in various applications. (S)he will be able to list the stages involved in a typical failure analysis. The student will be able to determine the most likely failure mechanism on the basis of the macroscopic and microscopic features of fracture surfaces. (S)he will be able to give rational instructions for avoiding failures. (S)he will be able to plan tests to measure fatigue and creep resistance.

Contents:
Failure mechanisms at low and high temperatures under static and dynamic loading. Failures caused by corrosion. Macroscopic and microscopic features of fracture surfaces. General principles and approaches to failure analysis. Practical examples of failure cases. Fatigue and creep testing.

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures 32 h / independent study 103 h.

Target group:
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

Recommended or required reading:

Assessment methods and criteria:
Final grade assessed on the basis of final examination.

Grading:
Pass grades on a scale of 1-5. Grade 0 fail.

Leikkaavuudet:
465084S  Exercises in Physical Metallurgy  4.0 op
ECTS Credits:
5 ects/135 hours study time

Language of instruction:
Finnish

Timing:
Exercises are possible to do after 465109S Microstructural changes in metallic alloys and 465110S Strength of metallic alloys.

Learning outcomes:
This course aims at giving the student the skills to find and use of materials engineering literature and to write a clear, well arranged report. The student also will become familiar with some topic areas of physical metallurgy on a deeper level. After the course, the student is capable of finding relevant and reliable literature on the topic of his/her research work. In addition, he/she is able to use this literature for solving his/her research problem and for preparing a well arranged research report. In the future, the student will be able to go deep into essential matters of his/her research subject of physical metallurgy.

Contents:
Physical metallurgy

Mode of delivery:
Face-to face teaching

Learning activities and teaching methods:
The course consists of three personal less extended experimental or literary works on given topics. Each exercise includes a report. Timing is free.

Prerequisites and co-requisites:
465109S Microstructural changes in metallic alloys and 465110S Strength of metallic alloys.

Recommended or required reading:
The students will be informed about the practical arrangements at the beginning of the course.

Assessment methods and criteria:
The final grade is based on the combined points from the exercises.

Grading:
Numerical grading scale 1 - 5.

Person responsible:
Olli Nousiainen

Working life cooperation:

465115S: Processing and properties of steels, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jukka Kömi
Opintokohteen kielet: Finnish

Leikkaavuudet:
465089S-01 Processing and Properties of Steels, examination 0.0 op
465089S-02 Processing and Properties of Steels, laboratory exercise 0.0 op
465089S Processing and Properties of Steels 3.5 op
ECTS Credits:
5 ECTS/135 h study time

Language of instruction:
Finnish

Timing:
Autumn semester period 1. Recommended for 5th year of studies.

Learning outcomes:
After completion of the course, the student will be able to list the main production stages in the steel production and name the most important factors affecting steel quality. (S)he will be able to explain the metallurgical phenomena involved in heat treatments and thermomechanical treatments, especially those concerned with grain refinement. (S)he will be able to name important steel types and describe their main properties and development trends. (S)he will be able to explain the factors that affect the formation of inclusions and the effects of inclusions on steel properties.

Contents:
Production of liquid steel, ladle treatments, continuous casting, rolling. Heat treatment and thermomechanical treatments and their effects on properties. Dynamic restoration mechanisms. Different steel types, their properties and applications. Inclusions and their effects on toughness, fatigue strength, machinability and surface quality.

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures 32 h / independent study 103 h.

Target group:
Compulsory in the master's stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

Recommended or required reading:
Study guide and lecture presentations.

Assessment methods and criteria:
Final grade assessed on the basis of a final examination.

Grading:
Pass grades on a scale of 1-5. Grade 0 fail.

Person responsible:
Professor Jukka Kömi

465116S: Rolling technology, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jussi Paavola
Opintokohteen kielet: Finnish
Leikkaavuudet:
465090A-01 Rolling Technology, examination 0.0 op
465090A-02 Rolling Technology, exercise 0.0 op
465090A Rolling Technology 8.0 op
ECTS Credits:
10 ects/270 hours study time

Language of instruction:
Finnish

Timing:
Lectures and laboratory works, I and II periods

Learning outcomes:
The target for the course is for the student to gain knowledge of the basic concepts of the rolling technology, the basic character of the rolling process and some special characteristics also which are related to it. Upon completing the required coursework, the student can explain the effects of hot rolling and cold rolling on the quality of the final product. With the help of the learned theory, the student can explain the significance of the process modeling on the control of the rolling process. Furthermore, the student understands the connection between rolling and materials engineering and can estimate their effect on the manufacturing process and on the quality of the final product.

Contents:
Concepts of the rolling technology and terminology; Basics of the plasticity theory; Calculation of roll force and characteristics of roll gap; Temperature behavior during rolling; Flatness and profile analysis; Accuracy of manufacturing and its statistical applications; Modeling of the rolling process.

Mode of delivery:
Face-to face teaching

Learning activities and teaching methods:
50 hours lectures/ 30 hours laboratory exercises/190 hours independent studies. Three laboratory excersises are included in the course.

Recommended or required reading:
Lecture booklet (In Finnish). Starling: Theory and practise of flat rolling

Assessment methods and criteria:
Final exam.

Grading:
Numerical grading scale 1 - 5.

Person responsible:
Jussi Paavola

A460224: Module of the Option/Mechactronics and Machine Diagnostics, Mechatronics, 40 op

Voimassaolo: 01.08.2005 -
462108S: Mechatronics, 6 op

Voimassaolo: 01.08.2015-
Opiskelu: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Liedes, Toni Mikael
Opintokohteen kielet: Finnish

Leikkaavuudet:
462051S Mechatronics 5.0 op

ECTS Credits:
6 / 160 hours of work
Language of instruction:
Finnish
Timing:
The course is held in the spring semester, during periods III and IV. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to explain the definition of mechatronics. He/she is able to divide a mechatronic system into its elementary units and he/she is able to explain the significance and interfaces of the various units. The student is able to analyze the kinematic and dynamic properties of mechanisms. Furthermore, the student is able to construct control profiles for actuators driving mechanisms. The student is able to describe the difference between kinematic and inverse kinematic problem, which he/she can also solve. In addition to this, the student is able to determine the basic structure of a digital control system. He/she is able to evaluate the preconditions for digital control as well as the requirements for hardware.

Contents:
Simulation and modelling of mechatronic systems; Actuators suitable for servo control; Basics of control systems; Sensors in closed-loop applications; Determination of control profiles; Kinematics and inverse kinematics of mechanisms.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 112 h

Target group:
Master's degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course: Machine Sensor Technology

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.
**Recommended or required reading:**

**Assessment methods and criteria:**
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Lecturer Toni Liedes

- 462055S Virtual Engineering of Mechatronic Products 5.0 op

**ECTS Credits:**
8 cr / 213 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

**Learning outcomes:**
Upon completion of the course, the student will be able to create a simulation model consisting of rigid bodies using Adams and MATLAB/Simulink software. The student is able to interpret the simulation results and is also able to evaluate the validity of the results. The student is able to design submodels of complex systems and he/she is able to explain the principles of creating a more complex simulation model. In addition to this, the student is able to evaluate the extent of modelling process of various kinds of engineering systems.

**Contents:**
Basics of virtual design; ADAMS simulation software principles and basic usage; Creation and usage of multibody systems comprised of rigid bodies; Kinematic and dynamic analysis; Determination of actuator motion paths and velocities as well as determination of loads; Modelling and simulation of control systems.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures 32 h / Group work 32 h / Self-study 149 h

**Target group:**
Master's degree students of mechanical engineering

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following courses prior to enrolling for the course.

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**
Lecture handout. Other material is in the beginning of the course.

**Assessment methods and criteria:**
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 5th autumn semester.

**Learning outcomes:**
Upon completion of the course, the student will be able to analyze and design mechatronic products using modern calculation and simulation methods. The student is able to choose the appropriate technology for a mechatronic system. He/she is also able to compare the various technologies. In addition to this, the student is able to assess the feasibility, performance and preconditions of different kinds of actuators in mechatronic products.

**Contents:**
Technology of digital control systems; Characteristics of dynamical systems and their behavior in time and frequency domain; Modelling and simulation of mechatronic systems; Basics of advanced vibration damping systems and their control; Modelling of friction; Experimental research of mechatronic systems.

**Mode of delivery:**
Blended teaching

**Learning activities and teaching methods:**
Lectures 16 h / Group work 32 h / Self-study 165 h

**Target group:**
Master's degree students of mechanical engineering

**Prerequisites and co-requisites:**

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Seppo Honkanen, Hiltunen, Jukka Antero, Ikonen, Mika Enso-Veitikka
Opintokohteen kielet: Finnish
Leikkaavuudet:

ECTS Credits:
5 ECTS / 133 hours of work

Language of instruction:
Finnish (available in English as a book exam: students will receive materials to study and take an final exam based on those materials)

Timing:
Period 1 (autumn term)

Learning outcomes:
After completing the course the student can describe the process dynamics with mathematical and graphical methods. The student can independently: form linear process models, analyse linear system stability, Bode diagrams, Routh's stability criterion and the Jury's test, and evaluate the behavior of processes through time and frequency range specifications.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and exercises

Target group:
B.Sc. students in process and environmental engineering

Prerequisites and co-requisites:
The courses 477011P Introduction to process and environmental engineering I, 488010P Introduction to process and environmental engineering II, and 477051A Automation engineering recommended beforehand

Recommended optional programme components:
None

Recommended or required reading:

**Assessment methods and criteria:**

Exam and in addition extra points from homeworks

**Grading:**

Numerical grading scale 1-5 or fail

**ECTS Credits:**

5 ects /135 hous of work

**Language of instruction:**

Finnish

**Timing:**

Lectures and exercises during the periods 3 - 4.

**Learning outcomes:**

The aim of this course is to familiarize students with the principles and phenomena of mechanical vibrations and show how different vibrations can be represented by a theoretical model and how detrimental vibrations can be avoided in structures and machines.

Learning outcomes: After the course, the student is capable of forming the equations of motion for a single and multi-degree-of-freedom systems and continuous models and is able to solve them using analytical, numerical and approximate methods. Moreover, the student is able to use finite element methods to solve basic vibration problems.

**Contents:**

Basic principles; Vibrations of single degree-of-freedom systems; Vibrations of multi-degree-of-freedom systems; Torsional vibration of a power drive chain; Longitudinal, transverse and torsional vibrations of a beam represented by a continuous model; Some approximation methods; Use of FEM in vibration analysis; Introduction to the theory of balancing; Experimental modal analysis.

**Mode of delivery:**

Face-to-face teaching

**Learning activities and teaching methods:**
This course will be based on lectures 45 h and exercises 30 h and 45 h self-study during periods 3 – 4 and 15 h for a project work. Students are required to take a final exam or mid-term exams.

Prerequisites and co-requisites:
First year mathematics, Strength of Materials I & II and Dynamics.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final examination. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jari Laukkanen

521301A: Digital Techniques 1, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Electrical Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Antti Mäntyniemi
Opintokohteen kielet: Finnish
Leikkaavuudet:
  521412A-02 Digital Techniques 1, Exercise Work 0.0 op
  521412A Digital Techniques 1 6.0 op
  521412A-01 Digital Techniques, Exam 0.0 op

ECTS Credits:
8

Language of instruction:
Finnish

Timing:
Periods 3-4

Learning outcomes:
1. After the course, students are able to ably binary number system and Boolean algebra in the form of switching algebra to the design and functional analyze of simple digital circuits.
2. In addition, they are also able to use in their designs graphical symbols specified in the dependency notation standard (SFS4612 ja IEEE/ANSI Std.91-1991) and different descriptions of function and structure of state machines.
3. Based on this knowledge, students are able to implement and analyze digital devices consisting of ordinary simple digital components.
4. After having assimilated the basic knowledge of digital technique, students are able to understand also the function and structure of micro controllers and micro processors.

Contents:
The principles of digital devices, Boolean algebra, numeral systems, operating principle, analysis and synthesis of combinational logic, flip-flops, operating principle, analysis and synthesis of sequential logic (state machines), physical characteristics of CMOS technology, registers and register transfers, computer memory, instruction set architecture, computer design basics, interfaces and data transmission.

Mode of delivery:
Classroom
Learning activities and teaching methods:
Lessons 40 h, weekly home assignments.

Target group:
Primarily 1st year electrical engineering and computer science and engineering BSc students. The course can be taken by the students of the university of Oulu.

Prerequisites and co-requisites:

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
Text books, MIT OpenCourseWare and excise literature.

Assessment methods and criteria:
Project work and home assignments
Read more about assessment criteria at the University of Oulu webpage.

Grading:
Project work and home assignments are assessed on numerical scale 1-5. The average of project work and home assignments will be the final grade.

Person responsible:
Antti Mäntyniemi

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 1. - 2.

Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:
The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-2. The course can be passed either by completing two midterm exams or a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

461112S: Mechanical vibrations, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
The aim of this course is to familiarize students with the principles and phenomena of mechanical vibrations and show how different vibrations can be represented by a theoretical model and how detrimental vibrations can be avoided in structures and machines. Learning outcomes: After the course, the student is capable of forming the equations of motion for a single and multi-degree-of-freedom systems and continuous models and is able to solve them using analytical, numerical and approximate methods. Moreover, the student is able to use finite element methods to solve basic vibration problems.

Contents:
Basic principles; Vibrations of single degree-of-freedom systems; Vibrations of multi-degree-of-freedom systems; Torsional vibration of a power drive chain; Longitudinal, transverse and torsional vibrations of a beam represented by a continuous model; Some approximation methods; Use of FEM in vibration analysis; Introduction to the theory of balancing; Experimental modal analysis.

Mode of delivery:
Face-to-face teaching

 464088S  Diagnosis of Machine Condition  8.0 op
 464088S-01 Diagnosis of Machine Condition, examination  0.0 op
 464088S-02 Diagnosis of Machine Condition, exercises  0.0 op

ECTS Credits:
10 ECTS credits / 267 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
Upon completion of the course, the student is capable to utilize the different methods of the machine diagnostics and use the most common measuring devices in the finding out the operation and condition of machines. He/she is able to apply the most important features and signal processing methods which are used in the condition monitoring and he/she can analyse the frequency contents of signals to clarify the problems which are related to the operation of machines. The student is able to draw up a measurement plan, carry out the measurements and report the obtained results. The student can use the standards of this field as help in the evaluation of the condition of machines and severity of vibrations. He/she is able to perceive what kind of significance the machine diagnostics has to the success of the maintenance and productivity.

Contents:
The most important methods and measuring techniques which are used in the machine diagnostics, the analysis of machine vibration and faults diagnosis, the most important signal processing methods, measurement planning, realisation and reporting, dynamic balancing of machines, standards of this field

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prequisite is the completion of the following course: 462107A Maintenance of Machines

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

462112S: Measuring instruments in machine diagnostics, 5 op
**Voimassaolo:** 01.08.2015
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Konsta Antero Karioja
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 464089S-01 Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, examination 0.0 op
- 464089S-02 Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, exercises 0.0 op
- 464089S Measuring Instrumentation and Techniques for Diagnosis of Machine Condition 5.0 op

**ECTS Credits:**
5 ECTS credits / 133 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during period 1 and 2. It is recommended to complete the course at the 5th autumn semester.

**Learning outcomes:**
Upon completion of the course, the student is able to design, build and calibrate different types of measurement sequences which are needed in machine diagnostics. He/she knows how to use data recorders, analyzers, PC-based measuring systems, data acquisition boards and filters as well as other typical measuring devices and is able to explain their operating principles. The student is also able to recognize typical sources of errors which can influence the reliability of the measuring results.

**Contents:**
Sensors and other devices which are used in the machine diagnostics, planning, functional evaluation and calibration of the measuring instruments and systems

**Mode of delivery:**
Face-to-face teaching

**Target group:**
Master's degree students in the mechanical engineering

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following courses: 462107A Maintenance of Machines and 462111S Machine Diagnostics

**Recommended optional programme components:**
The course is an independent entity.

**Recommended or required reading:**

**Assessment methods and criteria:**
Final examination and the other graded assignments

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

465113S: Failure mechanisms in metals, 5 op

**Voimassaolo:** 01.08.2015
Opiskelumuoto: Advanced Studies  
Laji: Course  
Vastuuysikkö: Field of Mechanical Engineering  
Arvostelu: 1 - 5, pass, fail  
Opettajat: Nousiainen, Olli Pekka  
Opintokohteen kielet: Finnish  
Leikkaavuudet:  
465079S Failure Analysis 3.5 op

ECTS Credits:  
5 ECTS/135 h study time  
Language of instruction:  
Finnish  
Timing:  
Spring semester, period 4. Recommended for fourth year of studies.  

Learning outcomes:  
After completion of the course, the student will be able to explain the effects of mechanical and environmental loads on the possible failure mechanisms in alloys. (S)he will be able to avoid unsuitable choices of materials in various applications. (S)he will be able to list the stages involved in a typical failure analysis. The student will be able to determine the most likely failure mechanism on the basis of the macroscopic and microscopic features of fracture surfaces. (S)he will be able to give rational instructions for avoiding failures. (S)he will be able to plan tests to measure fatigue and creep resistance.  

Contents:  
Failure mechanisms at low and high temperatures under static and dynamic loading. Failures caused by corrosion. Macroscopic and microscopic features of fracture surfaces. General principles and approaches to failure analysis. Practical examples of failure cases. Fatigue and creep testing.  

Mode of delivery:  
Face to face  
Learning activities and teaching methods:  
Lectures 32 h / independent study 103 h.  
Target group:  
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.  
Prerequisites and co-requisites:  
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.  
Recommended or required reading:  
Assessment methods and criteria:  
Final grade assessed on the basis of final examination.  
Grading:  
Pass grades on a scale of 1-5. Grade 0 fail.  
Person responsible:  
Professor Jukka Kömi

521301A: Digital Techniques 1, 8 op

Opintokohteen kielet: Finnish
Leikkaavuudet:
  ay031077P  Complex analysis (OPEN UNI)  5.0 op
  031018P  Complex Analysis  4.0 op

ECTS Credits:
5 ECTS credits / 135 hours of work

Language of instruction:
Finnish

Timing:
Fall semester, period 1.

Learning outcomes:
After completing the course the student
  1. is able to calculate the derivative and the integral of functions of complex variable,
  2. understands the concept of analyticity
  3. is capable of calculating the contour integrals and using the theory of residues for computing the line integrals, will be able to apply the techniques of complex analysis to simple problems in signal processing.

Contents:
Complex numbers and functions, complex derivative and analyticity, complex series, Cauchy’s integral theorem, Laurent and Taylor expansions, theory of residues, applications to signal analysis.

Mode of delivery:
Face-to-face teaching, Stack(web-based too) exercises.

Learning activities and teaching methods:
Lectures 28 h/Exercises 14 h/Self study 93 h.

Target group:
The students in the engineering sciences. The other students are welcome, too.

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the courses Calculus I and II, Differential Equations.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time

Recommended or required reading:
The lecture notes

Assessment methods and criteria:
Intermediate exams or a final exam. 
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

ECTS Credits:  
6 ECTS  
Language of instruction:  
Finnish  
Timing:  
Periods 1 and 2  
Learning outcomes:  
After completing the course the student is capable of explaining the crystalline structure of steel material and he understands elasto-plastic material model. He is able to explain the effect of inclusions, heat treatment and welding process to the mechanical properties of a steel material. The student is familiar with fire design of steel structures. He is able to explain common types of corrosion. The student is able to design the most typical joints in a steel frame and he can analyze simple steel structures. He is also able to analyze stability problems and explain the effects of imperfections and second order effects on frame behavior and member forces.  
Contents:  
Mode of delivery:  
Face-to-face.  
Learning activities and teaching methods:  
Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.  
Target group:  
Prerequisites and co-requisites:  
Recommended or required reading:  
Assessment methods and criteria:  
Three midterm exams or one final exam is required. One design exercise is required.  
Grading:  
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

ECTS Credits:
6 ECTS /162 hours

Language of instruction:
Finnish

Timing:
Lectures and exercising on periods 3 and 4.

Learning outcomes:
Upon completion of the course, the student will be able to design typical reinforced concrete structures to EN-standards.

Contents:
Strength and strain properties of concrete and reinforcing bars, time dependent properties. Limit state design of concrete beams and columns to EN standards. Service life design. Fire design. Anchoring and joints of reinforcing bars. Design of flanged cross sections, walls and wall like beams, and foundations carrying walls and columns.

Mode of delivery:
face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercising 54 hours including personal and team work. Self-reliant studying and homework 108 hours.

Target group:
Master level students focusing on structural engineering and design.

Prerequisites and co-requisites:
Recommended good skills in: Statics, strength of materials, structural mechanics of beam and plated structures. Basics in concrete technology and structural design.

Recommended or required reading:
Assessment methods and criteria:
Continuous assessment. The course can be completed by participating in intermediate exams during the course, or in final exam. Assessment criteria are based on the learning outcomes of the course.

Grading:
The course utilises a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
university teacher Raimo Hannila, LSc (tech.)

466109S: Concrete technology, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies

Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:

485105A  Concrete technology  5.0 op
460155S-01  Concrete Technology, examination  0.0 op
460155S-02  Concrete Technology, laboratory exercise  0.0 op
460155S  Concrete Technology  4.5 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Spring semester, periods 3-4

Learning outcomes:
After completing the course the student is able to specify concrete and the materials from which it is made. They can design normal concrete mixes and identify, describe and carry out the main laboratory tests relevant to the use of concrete on site.

Contents:
Cements and cementitious materials, aggregates for concrete, concrete mix design, properties of fresh and hardened concrete, laboratory tests, specification testing and compliance, environmental exposure classes.

Mode of delivery:
Face-to-face and distance learning

Learning activities and teaching methods:
Lectures, exercises, case studies, laboratory sessions and self-directed learning

Target group:
Students studying structural engineering

Prerequisites and co-requisites:
466101A Introduction to building construction

Recommended optional programme components:
466101A Introduction to building construction

Recommended or required reading:
Assessment methods and criteria:
Passed laboratory exercises and exam

Grading:
Numerical grading scale 1-5. Grade 0 stands for a fail.

466111S: Building physics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Filip Fedorik
Opintokohteen kielet: English
Leikkaavuudet:
- 485103A Building physics 5.0 op
- 460160S-01 Building Physics, examination 0.0 op
- 460160S-02 Building Physics, exercises 0.0 op
- 460160S Building Physics 3.5 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Autumn, Periods 1-2

Learning outcomes:
After completing the course the student can explain basic phenomenon of building physics. The student can analyse and describe heat, air and moisture transfer in buildings and also explain main causes of typical moisture damages. The student can explain factors affecting energy efficiency and can calculate the energy efficiency number. The student knows the calculation methods in acoustics.

Contents:

Mode of delivery:
Face-to-face and distance learning

Learning activities and teaching methods:
Lectures, exercises, case studies, and self directed learning

Target group:
Students studying structural engineering

Prerequisites and co-requisites:
466101A Introduction to building construction

Recommended or required reading:
The material that is in English will be distributed at the lectures 1) Lecture notes (mainly in Finnish) 2) Suomen rakentamismääräyskokoelman osat C1, C2, C3, C4 ja D3. 3) Introduction to Building Physics, Hagentoft, C.-E. (2001), ISBN 91-44-01896-7, (As specified in lectures).

Assessment methods and criteria:
Exercises and exam
**Grading:**
Numerical grading scale 1-5. Grade 0 stands for a fail.

Autumn semester, periods 1-2

**Learning outcomes:**
After completing the course the student is able to make 3D models of buildings and detail the connections between building elements and components. He can model different building materials and is familiar with one commercial software.

**Contents:**

**Mode of delivery:**
Face-to-face

**Learning activities and teaching methods:**
Lectures, exercises and self directed learning
Target group:
Students studying structural engineering

Recommended or required reading:
The material that is in English will be distributed at the lectures

Assessment methods and criteria:
Participation to lectures and exercises

Grading:
Pass or fail.

Person responsible:
Rauno Heikkilä

466117S: Structural renovation of buildings, 5 op

Voimassaolo: 01.08.2015 - 
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Markku Estola
Opintokohteen kielet: Finnish
Leikkaavuudet:
485104A Structural renovation of buildings 5.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Autumn, Periods 1 and 2

Learning outcomes:
After completing the course students can describe different structural materials and structural systems used in residential buildings in 1900-2000. They are able to identify and explain the typical risk structures and defects in those buildings. They can also explain the old design codes and recommendation used in Finland.

Contents:
Finnish house construction and typical details during 1900-2000. Standards, design recommendations and design methods used in Finland.

Mode of delivery:
Lecture room teaching

Learning activities and teaching methods:
Lectures and exercises

Target group:
Students studying structural engineering

Prerequisites and co-requisites:
466101A Introduction to building construction, 466111S Building physics

Recommended or required reading:
Lecture material.

Assessment methods and criteria:
Passed practical works and exam

Grading:
The course utilizes a numerical grading scale 1-5. Numerical scale zero stands for a fail.

**Person responsible:**
professor Rauno Heikkilä

### 460004S: Practical Training II, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Practical training
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Reijo Saari
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 485002S Advanced Practical Training 5.0 op
- 460002S Practical Training II 3.0 op

Ei opintojaksokuvauksia.

### A460228: Module of the Option, Engineering Mechanics, 40 op

**Voimassaolo:** 01.08.2005 -
**Opiskelumuoto:** Module of the Option
**Laji:** Study module
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opintokohteen kielet:** Finnish

Ei opintojaksokuvauksia.

**eng/a**

### 461110S: Fluid mechanics, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Koivurova Hannu
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 461036S-01 Heat and Mass Transfer II, examination 0.0 op
- 461036S-02 Heat and Mass Transfer II, exercises 0.0 op
- 461036S Heat and Mass Transfer II 3.5 op

**ECTS Credits:**
5 ECTS credits / 105 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the autumn semester, during periods I and II.
Learning outcomes:
The aim of this course is to familiarize students with the physical principles of heat transfer and fluid mechanics and their applications. Upon completing the required coursework, the student is able to design machines for the production, transfer and use of energy. Moreover, he/she is able to calculate the amount of loads the flow directs towards the structures. The above requires that the student is able to explain the fundamentals of fluid statics and calculate its applications. He/she can explain the characteristics of flowing fluid and the fundamental concepts of the flow mechanics. The student is able to use mass, momentum and energy conservation equations to solve engineering fluid mechanics problems in a controlled volume. The student is able to determine the frictional losses, piping size and pump power requirements for laminar and turbulent flow in closed conduits for viscous and inviscid fluids.

Contents:
Introduction, dimension analysis and its applications; Fluid statics: Equilibrium equations, pressure center, stability of a floating body; Fluid dynamics: inviscid and viscid incompressible flow, basics of compressible flow, use of numerical methods; Technical applications including flow in pipes, wind loads and wave loads. Introduction to computational fluid mechanics.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 45 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

461111S: Continuum mechanics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish

Leikkaavuudet:
461026S-01 Continuum Mechanics, examination 0.0 op
461026S-02 Continuum Mechanics, exercises 0.0 op
461026S Continuum Mechanics 6.0 op

ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4.
Learning outcomes:
The aim of this course is to provide an introductory understanding of continuum mechanics, the fundamental concepts and methods used in the mathematical modeling of solids and the engineering use of mechanistic models and analysis techniques. Learning outcomes: Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to use the use of specialized literature as a source of further information. The student is able to apply the fundamentals of tensor calculus in the orthogonal coordinate system and knows the most important characteristics of the second order symmetric tensor. He/she is able to explain the differences both on the description of linear and nonlinear deformation and on the Eulerian and Lagrangian description. The student is able to calculate the most important measures of the deformation and strain. He/she recognizes the different measures of stress in the different configurations, and can transform them in to the different configurations. He/she is able to identify the symmetries of the linear elastic material and is able to use the constitutive equation and constants of the isotropic linear elastic material.

Contents:
Fundamentals of tensor calculus; State of deformation and stress in the linear and non-linear theory; Basic conservation laws in continuum mechanics; Constitutive properties of materials; Introduction of linear elasticity and three dimensional plasticity.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 30 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

461112S: Mechanical vibrations, 5 op

Voimassaolo: 01.08.2015
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Laukkanen, Jari Jussi
Opintokohteen kielet: Finnish
Leikkaavuudet:
461019S-01 Mechanical Vibrations, examination 0.0 op
461019S-02 Mechanical Vibrations, exercises 0.0 op
461019S Mechanical Vibrations 6.0 op

ECTS Credits:
5 ects /135 hous of work
Language of instruction:
Finnish

Timing:
Lectures and exercises during the periods 3 - 4.

Learning outcomes:
The aim of this course is to familiarize students with the principles and phenomena of mechanical vibrations and show how different vibrations can be represented by a theoretical model and how detrimental vibrations can be avoided in structures and machines.
Learning outcomes: After the course, the student is capable of forming the equations of motion for a single and multi-degree-of-freedom systems and continuous models and is able to solve them using analytical, numerical and approximate methods. Moreover, the student is able to use finite element methods to solve basic vibration problems.

Contents:
Basic principles; Vibrations of single degree-of-freedom systems; Vibrations of multi-degree-of-freedom systems; Torsional vibration of a power drive chain; Longitudinal, transverse and torsional vibrations of a beam represented by a continuous model; Some approximation methods; Use of FEM in vibration analysis; Introduction to the theory of balancing; Experimental modal analysis.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
This course will be based on lectures 45 h and exercises 30 h and 45 h self-study during periods 3 – 4 and 15 h for a project work. Students are required to take a final exam or mid-term exams.

Prerequisites and co-requisites:
First year mathematics, Strength of Materials I & II and Dynamics.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final examination. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jari Laukkanen

461113S: Finite element methods III, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Lumijärvi, Jouko Veikko Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:
   461020S-01 Advanced Course in Finite Element Methods, examination 0.0 op
   461020S-02 Advanced Course in Finite Element Methods, exercises 0.0 op
   461020S Advanced Course in Finite Element Methods 5.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish Timing:
Lectures and exercises, periods 1. - 3.

Learning outcomes:
The aim of the course is to give students an enhanced understanding of the finite element method and to
familiarize students with the analysis of non-linear problems.
Learning outcomes: Upon completion of this course, the student is able to apply the finite element method
in analyzing the most important non-linear phenomena in engineering mechanics. He/she is able to choose
suitable modeling and solution methods for different phenomena

Contents:
Static and dynamic non-linear phenomena in engineering mechanics: Geometric nonlinearity, buckling,
contact problems and non-linear material models.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-3. The course can be passed by a final exam.

Prerequisites and co-requisites:
Finite Element Methods I, Finite Element Methods II.

Recommended or required reading:
Lecture notes (in Finnish), Belytschko, T., Liu, W. K., Moran, B.: Finite Elements for Nonlinear Continua
and Structures, John Wiley & Sons Ltd., 2000, Bathe, K.-J.: Finite Element Procedures, Prentice-Hall,

Assessment methods and criteria:
The grade of the course is based on a final exam. The student must pass the exercises before taking the
examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

461115S: Fracture mechanics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Laukkanen, Jari Jussi
Opintokohteen kielet: Finnish
Leikkaavuudet:
   461021S-01 Fracture Mechanics, examination 0.0 op
   461021S-02 Fracture Mechanics, exercises 0.0 op
   461021S Fracture Mechanics 5.0 op

ECTS Credits:
5 ects /135 hous of work

Language of instruction:
Finnish

Timing:
Lectures and exercises during the periods 3 - 4.

Learning outcomes:
The aim of the course is to familiarise students with the fracture of materials and with the use of fracture mechanics in design, which has become popular in machine construction and especially in the design of welded steel structures.

Learning outcomes: Upon completion of the course, a student should be able to know the fracture mechanisms and influence of material properties to them. He/She is also able to solve linear elastic fracture mechanics problems using tablebooks. Moreover the student is able to solve fatigue crack growth problems. The student is able to use finite element method to solve fracture mechanics problems. After the course the student has the basic skills to use fracture mechanics in design.

Contents:

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
This course will be based on lectures 45 h and exercises 30 h and 45 h self-study during periods 3 – 4 and 15 h for a project work. Students are required to take a final exam.

Prerequisites and co-requisites:
Courses 461103A, 4611104A and 461108A , recommended 465102A.

Assessment methods and criteria:
Final exam. After the passed exercises a student is allowed to take part in an exam.

Grading:
Numerical grading scale 1-5.

Person responsible:
University Teacher Jari Laukkanen

461116S: Experimental methods in engineering mechanics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettaja: Koivurova Hannu
Opintokohteen kielet: Finnish
Leikkaavuudet:

461028S-01 Experimental Methods in Engineering Mechanics, examination 0.0 op
461028S-02 Experimental Methods in Engineering Mechanics, exercises 0.0 op
461028S Experimental Methods in Engineering Mechanics 6.0 op

ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish

Timing:
Autumn semester

Learning outcomes:
The course focuses on experimental methods in engineering mechanics, where the student becomes familiar with measurements principles, application potentials and constraints. Learning outcomes: Student can make strain gage and vibration measurements in engineering mechanics field of know-how. With modal analysis tests, student can prepare measurements, make tests and estimate accuracy of the results and compare them to calculated results. He/she can find out characteristic magnitudes from the measurements. He/she can independently make strain gage measurements and estimate the inaccuracies.
Contents:
Strain gage and vibration measurements. Modal analysis tests.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Exercise 30 h / Self-study 60 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

464106S: Production machine design, Paper machinery, 10 op

Voimassaolo: 01.08.2015
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:
   464074S-01  Paper Machinery Construction, examination  0.0 op
   464074S-02  Paper machinery construction, seminar  0.0 op
   464074S  Paper Machinery Construction  7.0 op

ECTS Credits:
10 ects / 267 hours of studying work

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures and seminars arranged during autumn and spring periods 1.- 3.

Learning outcomes:
Upon completion of this course the students can describe the most common problems of the production machines and know the effects of machine constructions to quality and production. During the course papermachine is used as an example of production machines. After the course students can explain the importance of the pulp and paper industry to domestic economy and can describe the main stages of paper making processes.

Contents:
Fundamentals of production machine structures and their design criteria. Detailed design criteria of paper machine parts, calenders, rolls as well as construction materials.
Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 100 h / seminars 12 h / company excursions 30 h / individual studies 60 h.

Target group:
Master's degree students of mechanical engineering or process engineering

Recommended or required reading:
Copies of lecture material

Assessment methods and criteria:
Two midterm exams or one final exam is required and accepted seminar.

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
professor Juhani Niskanen

460004S: Practical Training II, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Practical training
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Reijo Saari
Opintokohteen kielet: Finnish
Leikkaavuudet:
   485002S   Advanced Practical Training   5.0 op
   460002S   Practical Training II   3.0 op

Ei opintojaksonkuvausia.

A460230: Module of the Option, Production Technology, 43,5 op

Voimassaolo: 01.08.2005 -
Opiskelumuoto: Module of the Option
Laji: Study module
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Ei opintojaksonkuvausia.

462104A: Machine automation, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Louhisalmi, Yrjö Aulis
Opintokohteen kielet: Finnish
Leikkaavuudet:
462022S-01 Machine Automation II, examination 0.0 op
462022S-02 Machine Automation II, exercise work 0.0 op
462022S Machine Automation II 5.0 op

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completion of the course, the student will be able to explain the basic principles and structures of a typical machine automation system. The student is able to divide an automation system into basic elements and explain their role and significance in the system. The student can apply the basic digital technology and logic methods in designing a typical machine automation system. In addition to this, the student knows the operating principles of programmable logic controllers (PLCs) and is able to implement a logic control for a typical application. Furthermore, the student is able to explain the basic principles of fieldbuses.

Contents:
Basics of automation; Basics of digital technology and logic; Description of operation sequences; Architecture of programmable logic controllers and their programming; Distributed systems and fieldbuses.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor's degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course: Actuators in Machine Automation

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time. However, it is recommended to complete the course Machine Sensor Technology simultaneously.

Recommended or required reading:
Lecture notes. Other material is in the beginning of the course.

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Yrjö Louhisalmi

463106S: Design and manufacture of sheet and plate metal products, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Introduction to Sheet Metal Design
4.5 op

Manufacturing Technology of Sheet Metal Products
4.5 op

ECTS Credits:
8 cr / 213 hours of work

Language of instruction:
Finnish, the course can be completed also in English.

Timing:
Organized in the spring semester. Lectures and seminar during period 3, practical work during period 4.

Learning outcomes:
The course introduces the student to the design and manufacture of sheet and plate metal products. After the course, the student can describe the designing and manufacturing processes of sheet and plate metal products. The student can design sheet and plate metal parts and the tools required. He/she can also utilize computer programs. The student can also take into account functional or manufacturing aspects of the parts.

Contents:
Features, possibilities and limitations of processes, equipment and systems used in design and manufacture of sheet and plate metal parts. Designing principles and methodology, computer-aided tools for designing sheet metal parts. Dimensioning principles, selection of materials, as well as the pros and cons of different manufacturing processes. Defects in manufacture and failure modes under static and dynamic loading. Characteristics of high strength and ultra high strength steels in sheet and plate metal products. Finally, the student can apply his/her knowledge to designing production-friendly sheet and plate metal products and assemblies.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
The course consists of lectures 40h, seminars 40h, demonstrations 10h, project work (in a group) 100h including independent studies, final exam 3h and preparation for the exam 20h. The project work topic is flexible and enables realization of student-initiated ideas.

Target group:
Mechanical engineering students in their Master's studies, 4th year.

Prerequisites and co-requisites:
Machine drawing and CAD, Computer aided design.

Recommended optional programme components:
Introduction to materials for mechanical engineering, Materials for mechanical engineering, Welding and heat treatment of metals.

Recommended or required reading:

Assessment methods and criteria:
Final exam. The final grade is based on the combined points from the exam (0.5), seminar and practical work (0.5).

Grading:
1 to 5, zero denotes failure to pass.
Person responsible:
Jyri Porter

Other information:
The course objective is to familiarize students especially with methods for manufacturing parts used in mechanical engineering.

463107S: Manufacturing technology II, 20 op

ECTS Credits:
20 ects cr/530 hours of work

Language of instruction:
Finnish, can be completed in English as a book examination.

Timing:
Lectures, periods I and II. Exercises and seminar during periods I - IV.

Learning outcomes:
This course is the major subject for those who are majoring in Manufacturing Engineering. The aim of the course is to give the student the necessary knowledge for production management and for development of a manufacturing instrument. It also provides the student with the competence to choose the most economical equipment and machining methods.
After the course the student is capable of explaining the objectives and functions of production as well as production planning systems and manufacturing systems. The student is able to explain the benefits of the flexible manufacturing system in small batch manufacturing. He/she is able to find competitive operation methods for different production cases. He/she is capable of evaluating machine tool structure knowledge and selecting productive manufacturing solutions. In addition, he/she is able to apply tool systems and machining methods of the different parts manufacturing. The students is also given a general view of electronics products and how they are manufactured. Upon completion of the course, a student should be able to recognize the special characteristics of electronics products on different assembly levels. He/she can explain the electronics components, manufacturing operations and assembly process requirements. He/she can also list and explain the essential factors affecting to quality and methods to ensure it.

Contents:
Production management; Production systems; Lean- and Just In Time production; Production automation; Construction and choice of machine tools; Fundamentals of tool design; The theory of cutting process; The theory of choosing economical cutting parameters. Electronics products; Components; Manufacturing process; Assembly process; Manufacturing systems and quality control.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 90 h are held in the fall during periods I and II. Laboratory and design exercises 410 h (150 h of guided teaching) will be done according to the project plan during the fall and spring semesters in groups of four. A seminar (30 h) attendance and presentation will be included in the course.

Target group:
Master's degree studies
**Prerequisites and co-requisites:**
463053A Manufacturing Technology I

**Recommended or required reading:**
The materials for this course include lecture notes and exercise materials. The material that is in English will be distributed at the lectures.

**Assessment methods and criteria:**
Three midterm exams or one final exam is required. Completing the exercises which need to be done, returned and accepted.

**Grading:**
Numerical grading scale 1-5. The final grade is based on the combined points from the exam (grade 0.5) and exercises (grade 0.5).

**Person responsible:**
University Teacher Heikki Pirkola

**463109S: Computer aided manufacturing, 7 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Field of Mechanical Engineering

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Jouko Heikkala

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 463059S-01 Computer aided manufacturing, examination 0.0 op
- 463059S-02 Computer aided manufacturing, exercise work 0.0 op
- 463059S Computer Aided Manufacturing 4.0 op

**ECTS Credits:**
7 ECTS

**Language of instruction:**
Finnish

**Timing:**
Lectures and exercises at period 2.

**Learning outcomes:**
The aim of this course is for the student to obtain the basic knowledge of computer-assisted manufacturing by lectures, demonstrations and practical projects. After the course the student knows how to utilize computer-aided methods and systems with different manufacturing processes in machine shops. The student can describe the main features, capabilities and limitations of different methods and processes as well as the trends of computer-aided manufacturing. Additionally, the student can apply his/her knowledge to solve practical problems.

**Contents:**
Application areas and interfaces in integrated, computer-aided manufacturing of mechanical parts; programming and simulating numerically controlled (NC) production machinery and processes; creating and processing of control information in NC manufacturing. Integration between NC-machine tools, NC-programming systems and manufacturing systems. Flexible manufacturing. Product data management. Analyzing and compensation of machining errors. Methods for surface and shape measuring. Methods, processes and control of rapid manufacturing. In project section of the course the knowledge is applied to solve practical problems in manufacturing.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures and exercises.

Prerequisites and co-requisites:
463102A Production Technology I.

Recommended or required reading:

Assessment methods and criteria:
Final exam. The final grade is based on the combined points from the exam (grade 0.6) and exercises (grade 0.4).

Grading:
Numerical grading scale 1-5.

Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

461108A: Mechanics of materials, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to apply the theory of the strength of materials to different kind of design problems needed in engineering mechanics. He/she understand the fundamental concepts of mechanics of deformable solids; including static equilibrium, geometry of deformation, and material constitutive behavior. He/she can discuss the basic mechanical principles underlying modern approaches for modelling of various types of materials under a different type of loadings. This provide students with exposure to the systematic methods for solving engineering problems in solid mechanics. He/she can also build the necessary theoretical background for further structural analysis and design courses.

Contents:
The general equations of mechanics. The stress and strain state. Different material models; Linear elastic material, isotropic, transverse-isotropic and orthotropic material models. The concept of strain energy. Theory of plasticity. Yield criterion, plastic flow rule and hardening. Limit state design. Introduction to visco elastic material and creep theory.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 30 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

461109A: Finite element methods II, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Lumijärvi, Jouko Veikko Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:
ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 3. - 4.

Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM in dynamic and buckling analyses and the preparedness to use commercial FE-programs. After this course, the student can explain the basic idea of the FEM in the case of two- and three dimensional, geometrically complicated structures. In addition to the linear displacement and heat transfer problems, he/she is able to critically utilize the ready to use FEM-programs in the analysis of buckling-, modal- and dynamic problems. Also, the student knows the basic types of nonlinearity and recognizes their effect on the computations.

Contents:
Shell and solid elements. Buckling and modal analyses. Dynamic analyses. An introduction to the nonlinearities.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 3.-4. The course can be passed by completing a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II, Finite Element Methods I.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

46113S: Finite element methods III, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opetajat: Lumijärvi, Jouko Veikko Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:
461020S-01 Advanced Course in Finite Element Methods, examination 0.0 op
ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Lectures and exercises, periods 1. - 3.

Learning outcomes:
The aim of the course is to give students an enhanced understanding of the finite element method and to familiarize students with the analysis of non-linear problems.
Learning outcomes: Upon completion of this course, the student is able to apply the finite element method in analyzing the most important non-linear phenomena in engineering mechanics. He/she is able to choose suitable modeling and solution methods for different phenomena

Contents:
Static and dynamic non-linear phenomena in engineering mechanics: Geometric nonlinearity, buckling, contact problems and non-linear material models.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-3. The course can be passed by a final exam.

Prerequisites and co-requisites:
Finite Element Methods I, Finite Element Methods II.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

462105A: Machine Sensor Technology, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Liedes, Toni Mikael
Opintokohteen kielet: Finnish
Leikkaavuudet:

ECTS Credits:
5 cr / 133 hours of work

Language of instruction:
Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completion of the course, the student will be able to identify, classify and bring into use the most common sensor types used in machine automation. The student is able to choose sensors for typical automation applications. In addition to this, the student is able to design a common analog and digital signal transmission and conditioning chain.

Contents:
Basics measuring systems; Classification of sensors; Characteristics of analog and digital domain; Analog to digital conversion; Basics of analog signal conditioning: amplification, attenuation and filtering; Operating principle of digital sensors; Examples of typical sensors used in mechanical engineering and civil engineering;

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 16 h / Self-study 85 h

Target group:
Bachelor’s degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course: Actuators in Machine Automation

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Lecturer Toni Liedes

462109S: Simulation and modelling of machines, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Louhisalmi, Yrjö Aulis
Opintokohteen kielet: Finnish
Leikkaavuudet:
  462055S-01 Virtual Engineering of Mechatronic Products, examination 0.0 op
  462055S-02 Virtual Engineering of Mechatronic Products, exercise work 0.0 op
  462055S Virtual Engineering of Mechatronic Products 5.0 op

ECTS Credits:
8 cr / 213 hours of work
Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to create a simulation model consisting of rigid bodies using Adams and MATLAB/Simulink software. The student is able to interpret the simulation results and is also able to evaluate the validity of the results. The student is able to design submodels of complex systems and he/she is able to explain the principles of creating a more complex simulation model. In addition to this, the student is able to evaluate the extent of modelling process of various kinds of engineering systems.

Contents:
Basics of virtual design; ADAMS simulation software principles and basic usage; Creation and usage of multibody systems comprised of rigid bodies; Kinematic and dynamic analysis; Determination of actuator motion paths and velocities as well as determination of loads; Modelling and simulation of control systems.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 32 h / Self-study 149 h

Target group:
Master’s degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
Lecture handout. Other material is in the beginning of the course.

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Lecturer Toni Liedes

462111S: Machine diagnostics, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouni Laurila
Opintokohteen kielet: Finnish
Leikkaavuudet:
464088S Diagnosis of Machine Condition 8.0 op
464088S-01 Diagnosis of Machine Condition, examination 0.0 op
464088S-02 Diagnosis of Machine Condition, exercises 0.0 op

ECTS Credits:
10 ECTS credits / 267 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

**Learning outcomes:**
: Upon completion of the course, the student is capable to utilize the different methods of the machine diagnostics and use the most common measuring devices in the finding out the operation and condition of machines. He/she is able to apply the most important features and signal processing methods which are used in the condition monitoring and he/she can analyse the frequency contents of signals to clarify the problems which are related to the operation of machines. The student is able to draw up a measurement plan, carry out the measurements and report the obtained results. The student can use the standards of this field as help in the evaluation of the condition of machines and severity of vibrations. He/she is able to perceive what kind of significance the machine diagnostics has to the success of the maintenance and productivity.

**Contents:**
The most important methods and measuring techniques which are used in the machine diagnostics, the analysis of machine vibration and faults diagnosis, the most important signal processing methods, measurement planning, realisation and reporting, dynamic balancing of machines, standards of this field

**Mode of delivery:**
Face-to-face teaching

**Target group:**
Master's degree students in the mechanical engineering

**Prerequisites and co-requisites:**
The recommended prerequisite is the completion of the following course: 462107A Maintenance of Machines

**Recommended optional programme components:**
The course is an independent entity.

**Recommended or required reading:**

**Assessment methods and criteria:**
Final examination and the other graded assignments

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Jouni Laurila

462112S: Measuring instruments in machine diagnostics, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Konsta Antero Karioja
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 464089S-01 Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, examination 0.0 op
ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during period 1 and 2. It is recommended to complete the course at the 5th autumn semester.

Learning outcomes:
Upon completion of the course, the student is able to design, build and calibrate different types of measurement sequences which are needed in machine diagnostics. He/she knows how to use data recorders, analyzers, PC-based measuring systems, data acquisition boards and filters as well as other typical measuring devices and is able to explain their operating principles. The student is also able to recognize typical sources of errors which can influence the reliability of the measuring results.

Contents:
Sensors and other devices which are used in the machine diagnostics, planning, functional evaluation and calibration of the measuring instruments and systems

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses: 462107A Maintenance of Machines and 462111S Machine Diagnostics

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

463104A: Advanced manufacturing methods, 7 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jyri Porter
Opintokohteen kielet: Finnish
Leikkaavuudet:
463068S-01 Laser Processing, examination 0.0 op
463068S-02 Laser Processing, exercises and seminari 0.0 op
463068S Laser Processing 3.5 op
ECTS Credits:
7 cr / 187 hours of work

Language of instruction:
Finnish, the course can also be completed in English

Timing:
Organized during the autumn semester. Lectures and seminar during period 1, demonstrations and practical work during period 2.

Learning outcomes:
The student can apply laser machining processes, electrical discharge machining, abrasive water jet cutting and additive manufacturing processes in today's machine shops as well as choose suitable equipment for various applications. The student can also describe the main features, capabilities, limitations and trends of the aforementioned processes.

Contents:
Classes and seminars deal with the fundamentals and equipment of laser material processing, electrical discharge machining, abrasive water jet cutting and additive manufacturing processes. Other processes may be added as deemed suitable. Material interaction, process and equipment possibilities and limitations. Additionally, safety and health aspects of the processes are covered.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
The course consists of lectures and seminars 46h, preparation for the seminars 34h, demonstrations 10h, practical work as a group project 70h, final exam 3h and preparation for the exam 24h. The project work is flexible and enables realization of student-initiated project ideas.

Target group:
Mechanical engineering students in their Master's studies, 5th year.

Recommended optional programme components:
Production technology studies in general.

Recommended or required reading:

Assessment methods and criteria:
Final exam. The final grade is based on the combined points from the exam (0.4), seminar and practical work (0.6).

Grading:
1 to 5, zero denotes failure to pass.

Person responsible:
Jyri Porter

Other information:
The course objective is to familiarize students especially with methods for manufacturing parts used in mechanical engineering. Methods covered in the course are alternative or supplementary to traditional manufacturing methods.

463105A: Casting techniques, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouko Heikkala
Opintokohteen kielet: Finnish
Learning outcomes:
The aim of the course is to give the students basic information concerning casting processes in manufacturing and how they are applied to different kinds of production and materials and also what those methods require for product design. After completing the course the student can estimate which kinds of products are possible and profitable to make by casting. The student can name the main principles of common casting methods and how those methods suit to different kinds of products, materials and various sizes. The student knows the most common metallic and plastic materials and the suitable casting methods for those. The student can also explain the main steps of the process plan and casting system design.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises.

Recommended or required reading:
Peter Beeley: Foundry Technology 719 p. Supplementary material will be given during the lectures.

Assessment methods and criteria:
Examination and exercises are graded 1-5. The final grade is determined 30% by the exercises and 70% by the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Heikkala

**463106S: Design and manufacture of sheet and plate metal products, 8 op**

- **Voimassaolo:** 01.08.2015 -
- **Opiskelumuoto:** Advanced Studies
- **Laji:** Course
- **Vastuuysikkö:** Field of Mechanical Engineering
- **Arvostelu:** 1 - 5, pass, fail
- **Opettajat:** Jyri Porter
- **Opintokohteen kielet:** Finnish
- **Leikkaavuudet:**
  - 463066A  Introduction to Sheet Metal Design  3.5 op
  - 463067A  Manufacturing Technology of Sheet Metal Products  3.5 op

**ECTS Credits:**
8 cr / 213 hours of work

**Language of instruction:**
Finnish, the course can be completed also in English.

**Timing:**
Organized in the spring semester. Lectures and seminar during period 3, practical work during period 4.

**Learning outcomes:**
The course introduces the student to the design and manufacture of sheet and plate metal products. After the course, the student can describe the designing and manufacturing processes of sheet and plate metal products. The student can design sheet and plate metal parts and the tools required. He/she can also utilize computer programs. The student can also take into account functional or manufacturing aspects of the parts.

**Contents:**
Features, possibilities and limitations of processes, equipment and systems used in design and manufacture of sheet and plate metal parts. Designing principles and methodology, computer-aided tools for designing sheet metal parts. Dimensioning principles, selection of materials, as well as the pros and cons of different manufacturing processes. Defects in manufacture and failure modes under static and dynamic loading. Characteristics of high strength and ultra high strength steels in sheet and plate metal products. Finally, the student can apply his/her knowledge to designing production-friendly sheet and plate metal products and assemblies.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
The course consists of lectures 40h, seminars 40h, demonstrations 10h, project work (in a group) 100h including independent studies, final exam 3h and preparation for the exam 20h. The project work topic is flexible and enables realization of student-initiated ideas.

**Target group:**
Mechanical engineering students in their Master's studies, 4th year.

**Prerequisites and co-requisites:**
Machine drawing and CAD, Computer aided design.

**Recommended optional programme components:**
Introduction to materials for mechanical engineering, Materials for mechanical engineering, Welding and heat treatment of metals.

**Recommended or required reading:**

**Assessment methods and criteria:**
Final exam. The final grade is based on the combined points from the exam (0.5), seminar and practical work (0.5).

**Grading:**
1 to 5, zero denotes failure to pass.

**Person responsible:**
Jyri Porter

**Other information:**
The course objective is to familarize students especially with methods for manufacturing parts used in mechanical engineering.

463108S: Manufacturing technology II, 10 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Jyri Porter, Pirkola, Heikki Juhani, Jouko Heikkala

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 463055S-01 Manufacturing Technology II, examination 0.0 op
- 463055S-02 Manufacturing technology II, seminar 0.0 op
- 463055S Manufacturing Technology II 5.0 op

**ECTS Credits:**
10 ects cr/ 270 hours of work

**Language of instruction:**
Finnish, can be completed in English as a book examination.

**Timing:**
Lectures during periods I and II. Lectures together the course 463107S Manufacturing Technology II. Seminar on period II.

**Learning outcomes:**
This course is the major subject for those who are majoring in Manufacturing Engineering. The aim of the course is to give the student the necessary knowledge for production management and for development of a manufacturing instrument. It also provides the student with the competence to choose the most economical equipment and machining methods.

After the course the student is capable of explaining the objectives and functions of production as well as production planningsystems and manufacturing systems. The student is able to explain the benefits of the flexible manufacturing system in small batch manufacturing. He/she is able to find competitive operation methods for different production cases. He/she is capable of evaluating machine tool structure knowledge and selecting productive manufacturing solutions. In addition, he/she is able to apply tool systems and machining methods of the different parts manufacturing. The students is also given a general view of electronics products and how they are manufactured. Upon completion of the course, a student should be able to recognize the special characteristics of electronics products on different assembly levels. He/she can explain the electronics components, manufacturing operations and assembly process requirements. He/she can also list and explain the essential factors affecting to quality and methods to ensure it.

**Contents:**
Production management; Production systems; Lean- and Just In Time production; Production automation; Construction and choice of machine tools; Fundamentals of tool design; The theory of cutting process; The theory of choosing economical cutting parameters. Electronics products; Components; Manufacturing process; Assembly process; Manufacturing systems and quality control.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 90 h are held in the fall during periods I and II. A seminar (30 h) attendance and presentation will be included in the course during the fall semester.

**Target group:**
Master's degree studies

**Prerequisites and co-requisites:**
463102A Manufacturing Technology I

**Recommended or required reading:**
The materials for this course include lecture notes and exercise materials. The material that is in English will be distributed at the lectures.

**Assessment methods and criteria:**
Three midterm exams or one final exam is required and the seminar needs to be accepted.

**Grading:**
Numerical grading scale 1-5.

**Person responsible:**
464105S: Computer aided design, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Tapio Korpela
Opintokohteen kielet: Finnish

Leikkaavuudet:
- 462044S-01 Computer Aided Design, examination 0.0 op
- 462044S-02 Computer Aided Design, exercise work 0.0 op
- 462044S Computer Aided Design 3.5 op

ECTS Credits:
5 ects / 133 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures and exercises arranged spring during periods 3.

Learning outcomes:
The aim of the course is to teach for students how the computer systems are used in different fields of mechanical machine design. After the course, the student is able to define what computer systems belong to the customer centered computer integrated manufacturing. He/she is able to explain what design knowledge is produced in these systems and what design knowledge is transferred between these systems. The student is able to use the CAD/CAM system used in the course in different fields of mechanical machine design.

Contents:
The course will focus on the use of computer systems in different fields of mechanical machine design. The emphasis is on the utilization of product data and the realization of product based design systems, where there is often a need to integrate many systems functionally together

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 20 h / exercises 30 h / practical work 83 h

Target group:
4th year master degree student of mechanical engineering.

Prerequisites and co-requisites:

Recommended or required reading:

Assessment methods and criteria:
Final exam and practical work. Final exam will be 40% and practical work 60% of final grade.

Grading:
: Numerical grading scale 1-5 / fail

Person responsible:
University Lecturer Tapio Korpela

464108S: Advanced Topics on Machine Design, 5 - 10 op
465113S: Failure mechanisms in metals, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Nousiainen, Olli Pekka
Opintokohteen kielet: Finnish
Voidaan suorittaa useasti: Kyllä

Ei opijoaksokuvauksia.

ECTS Credits:
5 ECTS/135 h study time
Language of instruction:
Finnish
Timing:
Spring semester, period 4. Recommended for fourth year of studies.
Learning outcomes:
After completion of the course, the student will be able to explain the effects of mechanical and environmental loads on the possible failure mechanisms in alloys. (S)he will be able to avoid unsuitable choices of materials in various applications. (S)he will be able to list the stages involved in a typical failure analysis. The student will be able to determine the most likely failure mechanism on the basis of the macroscopic and microscopic features of fracture surfaces. (S)he will be able to give rational instructions for avoiding failures. (S)he will be able to plan tests to measure fatigue and creep resistance.

Contents:
Failure mechanisms at low and high temperatures under static and dynamic loading. Failures caused by corrosion. Macroscopic and microscopic features of fracture surfaces. General principles and approaches to failure analysis. Practical examples of failure cases. Fatigue and creep testing.

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures 32 h / independent study 103 h.

Target group:
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

Recommended or required reading:
Assessment methods and criteria:
Final grade assessed on the basis of final examination.

Grading:
Pass grades on a scale of 1-5. Grade 0 fail.

Person responsible:
Professor Jukka Kömi

555343S: Product Data and product life cycle management, 5 op

Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Industrial Engineering and Management
Arvostelu: 1 - 5, pass, fail
Opintokohde tuele: English
Voidaan suorittaa useasti: Kyllä

Status:
5 ECTS credits.

ECTS Credits:
English.

Language of instruction:
Period 3-4.

Timing:
The course familiarises students with the broad concepts of product data management (PDM) and product life cycle management (PLM). Upon completion of the course, the student will be able to:

- understand the basic terminology related to product, productisation, PDM and PLM
- analyse the current status of the productisation, product data structures, product life cycle management, commercial and technical product portfolios and related applications in case companies
- create strategic PDM and PLM concept based on the critical building blocks for one product data, product master data and product related business data
- model the company’s HW, SW and Service product related commercial and technical product portfolios according to productisation concept
- understand the PDM and PLM processes including key roles as concept owners, education and support roles, data owners, data users including product data quality concept
- create and implement the governance model for PDM and PLM process and IT development as a part of company’s business process development including PDM/PLM related information technology (IT) architecture for product master data and product related business data

Learning outcomes:
PDM and PPM strategic targets, productisation concept, commercial and technical product portfolios, PDM and PLM processes and tools, governance model and related IT applications and architecture

Contents:
The tuition will be implemented as face-to-face teaching.

Mode of delivery:
The tuition will be implemented as face-to-face teaching, course readings and by a practical assignment which is common with a course 555346S Product portfolio management.

Learning activities and teaching methods:
Lectures 20 h, practical assignment (group work) and self-study 114 h.

Target group:
Industrial Engineering and Management students.
Prerequisites and co-requisites:
555242 Product development, 555346S Product portfolio management.

Recommended optional programme components:
555351S Advanced course in product development, 555350S Research and technology management

Recommended or required reading:
Lecture materials and selected articles.

Assessment methods and criteria:
Group work report (50 % of the grade) and exam (50 % of the grade).

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Senior research fellow Arto Tolonen.

Working life cooperation:
The group work will be done in cooperation with case companies.

Other information:
Previous course name was 'Product Data Management'.

A460247: Supplementary Module, Machine Design, 22 op

Voimassaolo: 01.08.2005 -
Opiskelumuoto: Supplementary Module
Laji: Study module
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kiele: Finnish

En opintojaksokuvausia.

461108A: Mechanics of materials, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kiele: Finnish

ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 3rd autumn semester.

Learning outcomes:
Upon completing the required coursework, the student knows the theoretical background of the strength of materials and he/she is able to apply the theory of the strength of materials to different kind of design problems needed in engineering mechanics. He/she understand the fundamental concepts of mechanics of
deformable solids; including static equilibrium, geometry of deformation, and material constitutive behavior. He/she can discuss the basic mechanical principles underlying modern approaches for modelling of various types of materials under a different type of loadings. This provide students with exposure to the systematic methods for solving engineering problems in solid mechanics. He/she can also build the necessary theoretical background for further structural analysis and design courses.

**Contents:**
The general equations of mechanics. The stress and strain state. Different material models; Linear elastic material, isotropic, transverse-isotropic and orthotropic material models. The concept of strain energy. Theory of plasticity. Yield criterion, plastic flow rule and hardening. Limit state design. Introduction to viscoelastic material and creep theory.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 30 h / Exercise 30 h / Self-study 30 h.

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**

**Assessment methods and criteria:**
This course utilizes continuous assessment. During the course, there are three intermediate exams. In addition to this, the students will be asked to calculate homeworks, and these homeworks will be assessed. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
University Lecturer Hannu Koivurova

461109A: Finite element methods II, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Lumijärvi, Jouko Veikko Juhani
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 461034A Finite Element Methods II 3.5 op
- 461034A-01 Finite Element Methods II, examination 0.0 op
- 461034A-02 Finite Element Methods II, exercises 0.0 op

**ECTS Credits:**
5 ECTS credits / 132 hours of work

**Language of instruction:**
Finnish

**Timing:**
Lectures and exercises, periods 3. - 4.

**Learning outcomes:**
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM in dynamic and buckling analyses and the preparedness to use commercial FE-programs.
After this course, the student can explain the basic idea of the FEM in the case of two- and three dimensional, geometrically complicated structures. In addition to the linear displacement and heat transfer problems, he/she is able to critically utilize the ready to use FEM-programs in the analysis of buckling-, modal- and dynamic problems. Also, the student knows the basic types of nonlinearity and recognizes their effect on the computations.

**Contents:**
Shell and solid elements. Buckling and modal analyses. Dynamic analyses. An introduction to the nonlinearities.

**Mode of delivery:**
Face-to-face teaching.

**Learning activities and teaching methods:**
Lectures and exercises take place during periods 3.-4. The course can be passed by completing a final exam.

**Prerequisites and co-requisites:**
Strength of Materials I and II, Finite Element Methods I.

**Recommended or required reading:**

**Assessment methods and criteria:**
The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

**Grading:**
Numerical grading scale 1-5.

**Person responsible:**
Jouko Lumijärvi
Learning outcomes: Upon completion of this course, the student is able to apply the finite element method in analyzing the most important non-linear phenomena in engineering mechanics. He/she is able to choose suitable modeling and solution methods for different phenomena.

Contents:
Static and dynamic non-linear phenomena in engineering mechanics: Geometric nonlinearity, buckling, contact problems and non-linear material models.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-3. The course can be passed by a final exam.

Prerequisites and co-requisites:
Finite Element Methods I, Finite Element Methods II.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi

462109S: Simulation and modelling of machines, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Louhisalmi, Yrjö Aulis
Opintokohteen kielet: Finnish
Leikkaavuudet:
462055S-01 Virtual Engineering of Mechatronic Products, examination 0.0 op
462055S-02 Virtual Engineering of Mechatronic Products, exercise work 0.0 op
462055S Virtual Engineering of Mechatronic Products 5.0 op

ECTS Credits:
8 cr / 213 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
Upon completion of the course, the student will be able to create a simulation model consisting of rigid bodies using Adams and MATLAB/Simulink software. The student is able to interpret the simulation results and is also able to evaluate the validity of the results. The student is able to design submodels of complex systems and he/she is able to explain the principles of creating a more complex simulation model. In addition to this, the student is able to evaluate the extent of modelling process of various kinds of engineering systems.
Contents:
Basics of virtual design; ADAMS simulation software principles and basic usage; Creation and usage of multibody systems comprised of rigid bodies; Kinematic and dynamic analysis; Determination of actuator motion paths and velocities as well as determination of loads; Modelling and simulation of control systems.

Mode of delivery:
Blended teaching

Learning activities and teaching methods:
Lectures 32 h / Group work 32 h / Self-study 149 h

Target group:
Master's degree students of mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses prior to enrolling for the course.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
Lecture handout. Other material is in the beginning of the course.

Assessment methods and criteria:
This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Lecturer Toni Liedes

462111S: Machine diagnostics, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouni Laurila
Opintokohteen kielet: Finnish
Leikkaavuudet:
   464088S  Diagnosis of Machine Condition  8.0 op
   464088S-01 Diagnosis of Machine Condition, examination  0.0 op
   464088S-02 Diagnosis of Machine Condition, exercises  0.0 op

ECTS Credits:
10 ECTS credits / 267 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
Upon completion of the course, the student is capable to utilize the different methods of the machine diagnostics and use the most common measuring devices in the finding out the operation and condition of machines. He/she is able to apply the most important features and signal processing methods which are used in the condition monitoring and he/she can analyse the frequency contents of signals to clarify the problems which are related to the operation of machines. The student is able to draw up a measurement
plan, carry out the measurements and report the obtained results. The student can use the standards of this field as help in the evaluation of the condition of machines and severity of vibrations. He/she is able to perceive what kind of significance the machine diagnostics has to the success of the maintenance and productivity.

Contents:
The most important methods and measuring techniques which are used in the machine diagnostics, the analysis of machine vibration and faults diagnosis, the most important signal processing methods, measurement planning, realisation and reporting, dynamic balancing of machines, standards of this field

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following course: 462107A Maintenance of Machines

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Jouni Laurila

462112S: Measuring instruments in machine diagnostics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Konsta Antero Karioja
Opintokohteen kielet: Finnish
Leikkaavuudet:
464089S-01 Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, examination 0.0 op
464089S-02 Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, exercises 0.0 op
464089S Measuring Instrumentation and Techniques for Diagnosis of Machine Condition 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during period 1 and 2. It is recommended to complete the course at the 5th autumn semester.

Learning outcomes:
Upon completion of the course, the student is able to design, build and calibrate different types of measurement sequences which are needed in machine diagnostics. He/she knows how to use data recorders, analyzers, PC-based measuring systems, data acquisition boards and filters as well as other typical measuring devices and is able to explain their operating principles. The student is also able to recognize typical sources of errors which can influence the reliability of the measuring results.

Contents:
Sensors and other devices which are used in the machine diagnostics, planning, functional evaluation and calibration of the measuring instruments and systems

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses: 462107A Maintenance of Machines and 462111S Machine Diagnostics

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

ECTS Credits:
7 cr / 187 hours of work

Language of instruction:
Finnish, the course can also be completed in English

Timing:
Organized during the autumn semester. Lectures and seminar during period 1, demonstrations and practical work during period 2.

Learning outcomes:
The student can apply laser machining processes, electrical discharge machining, abrasive water jet cutting and additive manufacturing processes in today's machine shops as well as choose suitable equipment for various applications. The student can also describe the main features, capabilities, limitations and trends of the aforementioned processes.

Contents:
Classes and seminars deal with the fundamentals and equipment of laser material processing, electrical discharge machining, abrasive water jet cutting and additive manufacturing processes. Other processes may be added as deemed suitable. Material interaction, process and equipment possibilities and limitations. Additionally, safety and health aspects of the processes are covered.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
The course consists of lectures and seminars 46h, preparation for the seminars 34h, demonstrations 10h, practical work as a group project 70h, final exam 3h and preparation for the exam 24h. The project work is flexible and enables realization of student-initiated project ideas.

Target group:
Mechanical engineering students in their Master's studies, 5th year.

Recommended optional programme components:
Production technology studies in general.

Recommended or required reading:

Assessment methods and criteria:
Final exam. The final grade is based on the combined points from the exam (0.4), seminar and practical work (0.6).

Grading:
1 to 5, zero denotes failure to pass.

Person responsible:
Jyri Porter

Other information:
The course objective is to familiarize students especially with methods for manufacturing parts used in mechanical engineering. Methods covered in the course are alternative or supplementary to traditional manufacturing methods.

463105A: Casting techniques, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouko Heikkala
Opintokohteen kielet: Finnish
Leikkaavuudet:
463065A-01 Manufacturing of plastic products, examination 0.0 op
463065A-02 Manufacturing of plastic products, exercise work 0.0 op
463058A-01 Foundry Technology, examination 0.0 op
463058A-02 Foundry Technology, exercises 0.0 op
463058A-03 Foundry technology, laboratory exercise 0.0 op
463058A Foundry Technology 3.5 op
463065A Manufacturing of Plastics Products 3.5 op
ECTS Credits:
8 ECTS

Language of instruction:
Finnish

Learning outcomes:
The aim of the course is to give the students basic information concerning casting processes in manufacturing and how they are applied to different kinds of production and materials and also what those methods require for product design. After completing the course the student can estimate which kinds of products are possible and profitable to make by casting. The student can name the main principles of common casting methods and how those methods suit to different kinds of products, materials and various sizes. The student knows the most common metallic and plastic materials and the suitable casting methods for those. The student can also explain the main steps of the process plan and casting system design.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises.

Recommended or required reading:
Peter Beeley: Foundry Technology 719 p. Supplementary material will be given during the lectures.

Assessment methods and criteria:
Examination and exercises are graded 1-5. The final grade is determined 30% by the exercises and 70% by the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Heikkala

463106S: Design and manufacture of sheet and plate metal products, 8 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jyri Porter
Opintokohteen kielet: Finnish
Leikkaavuudet:
463066A Introduction to Sheet Metal Design 3.5 op
463067A Manufacturing Technology of Sheet Metal Products 3.5 op

ECTS Credits:
8 cr / 213 hours of work

Language of instruction:
Finnish, the course can be completed also in English.

Timing:
Organized in the spring semester. Lectures and seminar during period 3, practical work during period 4.

Learning outcomes:
The course introduces the student to the design and manufacture of sheet and plate metal products. After the course, the student can describe the designing and manufacturing processes of sheet and plate metal products. The student can design sheet and plate metal parts and the tools required. He/she can also utilize computer programs. The student can also take into account functional or manufacturing aspects of the parts.
Contents:
Features, possibilities and limitations of processes, equipment and systems used in design and manufacture of sheet and plate metal parts. Designing principles and methodology, computer-aided tools for designing sheet metal parts. Dimensioning principles, selection of materials, as well as the pros and cons of different manufacturing processes. Defects in manufacture and failure modes under static and dynamic loading. Characteristics of high strength and ultra high strength steels in sheet and plate metal products. Finally, the student can apply his/her knowledge to designing production-friendly sheet and plate metal products and assemblies.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
The course consists of lectures 40h, seminars 40h, demonstrations 10h, project work (in a group) 100h including independent studies, final exam 3h and preparation for the exam 20h. The project work topic is flexible and enables realization of student-initiated ideas.

Target group:
Mechanical engineering students in their Master's studies, 4th year.

Prerequisites and co-requisites:
Machine drawing and CAD, Computer aided design.

Recommended optional programme components:
Introduction to materials for mechanical engineering, Materials for mechanical engineering, Welding and heat treatment of metals.

Recommended or required reading:

Assessment methods and criteria:
Final exam. The final grade is based on the combined points from the exam (0.5), seminar and practical work (0.5).

Grading:
1 to 5, zero denotes failure to pass.

Person responsible:
Jyri Porter

Other information:
The course objective is to familiarize students especially with methods for manufacturing parts used in mechanical engineering.

463108S: Manufacturing technology II, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jyri Porter, Pirkola, Heikki Juhani, Jouko Heikkala
Opintokohteen kielet: Finnish
Leikkaavuudet:
463055S-01 Manufacturing Technology II, examination 0.0 op
463055S-02 Manufacturing technology II, seminar 0.0 op
463055S Manufacturing Technology II 5.0 op
ECTS Credits:
10 ects cr/ 270 hours of work

Language of instruction:
Finnish, can be completed in English as a book examination.

Timing:
Lectures during periods I and II. Lectures together the course 463107S Manufacturing Technology II.
Seminar on period II.

Learning outcomes:
This course is the major subject for those who are majoring in Manufacturing Engineering. The aim of the course is to give the student the necessary knowledge for production management and for development of a manufacturing instrument. It also provides the student with the competence to choose the most economical equipment and machining methods.

After the course the student is capable of explaining the objectives and functions of production as well as production planning systems and manufacturing systems. The student is able to explain the benefits of the flexible manufacturing system in small batch manufacturing. He/she is able to find competitive operation methods for different production cases. He/she is capable of evaluating machine tool structure knowledge and selecting productive manufacturing solutions. In addition, he/she is able to apply tool systems and machining methods of the different parts manufacturing. The students is also given a general view of electronics products and how they are manufactured. Upon completion of the course, a student should be able to recognize the special characteristics of electronics products on different assembly levels. He/she can explain the electronics components, manufacturing operations and assembly process requirements. He/she can also list and explain the essential factors affecting to quality and methods to ensure it.

Contents:
Production management; Production systems; Lean- and Just In Time production; Production automation; Construction and choice of machine tools; Fundamentals of tool design; The theory of cutting process; The theory of choosing economical cutting parameters. Electronics products; Components; Manufacturing process; Assembly process; Manufacturing systems and quality control.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 90 h are held in the fall during periods I and II. A seminar (30 h) attendance and presentation will be included in the course during the fall semester.

Target group:
Master's degree studies

Prerequisites and co-requisites:
463102A Manufacturing Technology I

Recommended or required reading:
The materials for this course include lecture notes and exercise materials. The material that is in English will be distributed at the lectures.

Assessment methods and criteria:
Three midterm exams or one final exam is required and the seminar needs to be accepted.

Grading:
Numerical grading scale 1-5.

Person responsible:
University Teacher Heikki Pirkola

464108S: Advanced Topics on Machine Design, 5 - 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysiköt: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
**465113S: Failure mechanisms in metals, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Nousiainen, Olli Pekka

**Opintokohde:**

**Leikkaavuudet:**

465079S  Failure Analysis  3.5 op

**ECTS Credits:**
5 ECTS/135 h study time

**Language of instruction:**
Finnish

**Timing:**
Spring semester, period 4. Recommended for fourth year of studies.

**Learning outcomes:**
After completion of the course, the student will be able to explain the effects of mechanical and environmental loads on the possible failure mechanisms in alloys. (S)he will be able to avoid unsuitable choices of materials in various applications. (S)he will be able to list the stages involved in a typical failure analysis. The student will be able to determine the most likely failure mechanism on the basis of the macroscopic and microscopic features of fracture surfaces. (S)he will be able to give rational instructions for avoiding failures. (S)he will be able to plan tests to measure fatigue and creep resistance.

**Contents:**
Failure mechanisms at low and high temperatures under static and dynamic loading. Failures caused by corrosion. Macroscopic and microscopic features of fracture surfaces. General principles and approaches to failure analysis. Practical examples of failure cases. Fatigue and creep testing.

**Mode of delivery:**
Face to face

**Learning activities and teaching methods:**
Lectures 32 h / independent study 103 h.

**Target group:**
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

**Prerequisites and co-requisites:**
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

**Recommended or required reading:**

**Assessment methods and criteria:**
Final grade assessed on the basis of final examination.

**Grading:**
Pass grades on a scale of 1-5. Grade 0 fail.
466105S: Design of Steel Structures, 6 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Kangaspurokari, Matti Johannes
Opintokohteen kielet: Finnish
Leikkaavuudet:

485118S  Design of Steel Structures  5.0 op
ay466105S Design of Steel Structures (OPEN UNI)  6.0 op
460127S-01 Design of Steel Structures, examination  0.0 op
460127S-02 Design of Steel Structures, exercise work  0.0 op
460125A Introduction to Design of Steel Structures  4.0 op
460125A-01 Introduction to Design of Steel Structures, examination  0.0 op
460125A-02 Introduction to Design of Steel Structures, exercise work  0.0 op
460127S  Design of Steel Structures  4.0 op

ECTS Credits:
6 ECTS

Language of instruction:
Finnish

Timing:
Periods 1 and 2

Learning outcomes:
After completing the course the student is capable of explaining the crystalline structure of steel material and he understands elasto-plastic material model. He is able to explain the effect of inclusions, heat treatment and welding process to the mechanical properties of a steel material. The student is familiar with fire design of steel structures. He is able to explain common types of corrosion. The student is able to design the most typical joints in a steel frame and he can analyze simple steel structures. He is also able to analyze stability problems and explain the effects of imperfections and second order effects on frame behavior and member forces.

Contents:

Mode of delivery:
Face-to-face.

Learning activities and teaching methods:
Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:

Prerequisites and co-requisites:

**Recommended or required reading:**

**Assessment methods and criteria:**
Three midterm exams or one final exam is required. One design exercise is required.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Matti Kangaspuoskari

**466106S: Advanced topics on design of steel structures, 6 op**

**Voimassaolo:** 01.08.2015 -

- 460128S Advanced Topics on Design of Steel Structures I  4.0 op

**ECTS Credits:**
6 ECTS

**Language of instruction:**
Finnish

**Timing:**
Periods 3 and 4

**Learning outcomes:**
After completing the course the student is capable of explain the performance and design principles of welded steel structures exposed to fatigue loading. He is able to design the plated structural elements and cold-formed members. He is able to analyze and design a steel frame. He is able to analyze dynamically loaded structures and can explain the effect of vibration on steel structures strength and reliability.

**Contents:**

**Mode of delivery:**
Face-to-face.

**Learning activities and teaching methods:**
Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

**Target group:**
Major students in Structural Engineering, Machine design, and Engineering Mechanics. 466102A

**Prerequisites and co-requisites:**
172

Recommended or required reading:

Assessment methods and criteria:
Three midterm exams or one final exam is required. One design exercise is required.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Matti Kangaspuuoskari

555343S: Product Data and product life cycle management, 5 op

Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Industrial Engineering and Management
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English
Voidaan suorittaa useasti: Kyllä

Status:
5 ECTS credits.

ECTS Credits:
English.

Language of instruction:
Period 3-4.

Timing:
The course familiarises students with the broad concepts of product data management (PDM) and product life cycle management (PLM). Upon completion of the course, the student will be able to:
- understand the basic terminology related to product, productisation, PDM and PLM
- analyse the current status of the productisation, product data structures, product life cycle management, commercial and technical product portfolios and related applications in case companies
- create strategic PDM and PLM concept based on the critical building blocks for one product data, product master data and product related business data
- model the company’s HW, SW and Service product related commercial and technical product portfolios according to productisation concept
- understand the PDM and PLM processes including key roles as concept owners, education and support roles, data owners, data users including product data quality concept
- create and implement the governance model for PDM and PLM process and IT development as a part of company’s business process development including PDM/PLM related information technology (IT) architecture for product master data and product related business data

Learning outcomes:
PDM and PPM strategic targets, productisation concept, commercial and technical product portfolios, PDM and PLM processes and tools, governance model and related IT applications and architecture

Contents:
The tuition will be implemented as face-to-face teaching.

Mode of delivery:
The tuition will be implemented as face-to-face teaching, course readings and by a practical assignment which is a common with a course 555346S Product portfolio management.

Learning activities and teaching methods:
Lectures 20 h, practical assignment (group work) and self-study 114 h.
Target group:
Industrial Engineering and Management students.

Prerequisites and co-requisites:
555242 Product development, 555346S Product portfolio management.

Recommended optional programme components:
555351S Advanced course in product development, 555350S Research and technology management

Recommended or required reading:
Lecture materials and selected articles.

Assessment methods and criteria:
Group work report (50 % of the grade) and exam (50 % of the grade).

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Senior research fellow Arto Tolonen.

Working life cooperation:
The group work will be done in cooperation with case companies.

Other information:
Previous course name was ‘Product Data Management’.

A460249: Supplementary Module/Mechactronics and Machine Diagnostics, Mechatronics, 20 op

Voimassaolo: 01.08.2005 -
Opiskelumuoto: Supplementary Module
Laji: Study module
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kiele: Finnish

Ei opintokohsuokuvauksia.

521287A: Introduction to Computer Systems, 5 op

Voimassaolo: 01.08.2016 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Computer Science and Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Teemu Leppänen
Opintokohteen kiele: Finnish

Leikkaavuudet:
ay521287A Introduction to Computer Systems (OPEN UNI) 5.0 op
521142A Embedded Systems Programming 5.0 op

ECTS Credits:
5 ECTS cr

Language of instruction:
Lecturing in Finnish, course and exercise material available in English.

Timing:
Autumn, periods 1-2.

**Learning outcomes:**
Upon completing the course, the student understands the basics of computer architecture and CPU operation.
Student knows number systems and data representations in computer.
Student is familiar of I/O operation with peripheral devices.
Student is able to implement small programs with the C programming language for workstations and embedded systems.
Student recognizes how embedded systems programming is different from programming general-purpose computers.

**Contents:**
Overview of computer architecture and CPU, data types and memory management, interrupts, registers and I/O, general computer and embedded systems programming, basics of the C programming language.

**Mode of delivery:**
Web-based teaching + face-to-face teaching.

**Learning activities and teaching methods:**
Lectures (20h), course exercises (10-20h), laboratory exercise (3h) and course project in a group.

**Target group:**
Students of the University of Oulu

**Prerequisites and co-requisites:**
Elementary programming 521141P

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**
Lecture notes and exercise material are available in the course website. For English speaking students, either of the following material may be useful:

**Assessment methods and criteria:**
The assessment criteria is based on the learning outcomes of the course. Students complete the course exercises, participate to the laboratory exercise and complete the course project in a group. Assessment is based on the exercises and the course project. More detailed information on assessment is published in the lecture material.
Read more about [assessment criteria](#) at the University of Oulu webpage.

**Grading:**
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Teemu Leppänen

**Working life cooperation:**
Visiting lectures with experts from local industry are possible.

**Other information:**
This course replaces the course 521142A Embedded systems programming.

---

**521077P: Introduction to Electronics, 5 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuyksikkö:** Electrical Engineering DP  
**Arvostelu:** 1 - 5, pass, fail  
**Opettajat:** Jari Hannu  
**Opintokohteen kielet:** Finnish  
**Leikkaavuudet:**  
- ay521077P  
  Introduction to Electronics (OPEN UNI)  
  5.0 op  
- 521209A  
  Electronics Components and Materials  
  2.0 op

**ECTS Credits:**  
5 ECTS credits / 132.5 hours of work

**Language of instruction:**  
Finnish

**Timing:**  
The course is held in the 1st period. It is recommended to complete the course at the 1st autumn semester.

**Learning outcomes:**  
1. Student understands the block structures of electronic devices and their signal processing paths.

2. Student can identify the interfaces of analog and digital electronics and the software operations.

3. Student is able to identify and classify electronics components and compare their properties.

4. Students can describe electric conductivity and apply the phenomenon on designing and choosing resistors.

5. Student is able to estimate the difference between dielectric materials and how they affect the properties of a capacitor.

6. Student can compare properties of magnetic materials and how identify they effect on inductive components.

7. Student can identify semiconductivity and is able to list typical semiconductor components.

8. Student can classify different circuit board techniques and is able to choose proper coupling techniques.

9. Student can identify the future technologies of electronics materials.

**Contents:**  

**Mode of delivery:**  
Face-to-face teaching and independent work.

**Learning activities and teaching methods:**  
The implementation methods of the course vary. The course will be arranged utilizing activating teaching methods agreed on together with the students. There will be 48 hours of guided teaching events and 84.5 hours of teaching without guidance either privately or in a group.

**Target group:**  
First year electrical engineering students.

**Prerequisites and co-requisites:**  
No prerequisites.

**Recommended optional programme components:**  
-

**Recommended or required reading:**  
Lecture material; Materials science and engineering: an introduction / Willam D. Callister, chapters 1, 18 and 20; Electronic components and technology / S. J. Sangwine. Chapters 1,2,3,5 and 7
Assessment methods and criteria:
This course utilizes continuous assessment. During the course, there are two intermediate exams. In addition students will make course work which are graded. The assessment of the course is based on the learning outcomes of the course. Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Jari Hannu

Working life cooperation:
No

031077P: Complex analysis, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Basic Studies
Laji: Course
Vastuuysikkö: Applied Mathematics and Computational Mathematics
Arvostelu: 1 - 5, pass, fail
Opettajat: Ruotsalainen Keijo
Opintokohteen kielet: Finnish
Leikkaavuudet:
ay031077P Complex analysis (OPEN UNI) 5.0 op
031018P Complex Analysis 4.0 op

ECTS Credits:
5 ECTS credits / 135 hours of work

Language of instruction:
Finnish

Timing:
Fall semester, period 1.

Learning outcomes:
After completing the course the student
1. is able to calculate the derivative and the integral of functions of complex variable,
2. understands the concept of analyticity
3. is capable of calculating the contour integrals and using the theory of residues for computing the line integrals, will be able to apply the techniques of complex analysis to simple problems in signal processing.

Contents:
Complex numbers and functions, complex derivative and analyticity, complex series, Cauchy’s integral theorem, Laurent and Taylor expansions, theory of residues, applications to signal analysis.

Mode of delivery:
Face-to-face teaching, Stack(web-based too) exercises.

Learning activities and teaching methods:
Lectures 28 h/Exercises 14 h/Self study 93 h.

Target group:
The students in the engineering sciences. The other students are welcome, too.

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the courses Calculus I and II, Differential Equations.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**
The lecture notes

**Assessment methods and criteria:**
Intermediate exams or a final exam.
Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Jukka Kemppainen

**Working life cooperation:**
-

**Other information:**
-

031080A: Signal Analysis, 5 op

*Voimassaolo:* 01.08.2015 -
*Opiskelumuoto:* Intermediate Studies
*Laji:* Course
*Vastuuysikkö:* Applied Mathematics and Computational Mathematics
*Arvostelu:* 1 - 5, pass, fail
*Opettajat:* Kotila, Vesa Iisakki
*Opintokohteen kielet:* Finnish

**Leikkaavuudet:**

</tbody>
</table>

**ECTS Credits:**
5 ECTS credits / 135 hours of work

**Language of instruction:**
Finnish.
The course can be completed in English by a final exam or a retake exam.

**Timing:**
The course is held in the autumn semester, during period II. It is recommended to complete the course at the 2nd autumn semester.

**Learning outcomes:**
Upon completion of the course, the student:
- is able to calculate the energy, the power, the convolution and the frequency spectrum of discrete and analog, periodic and non-periodic deterministic signals
- is able to study the stationarity, the mutual dependence and the frequency content of random signals by means of the auto- and cross-correlation functions, and the power- and cross-power spectral densities
- is able to explain the mathematical grounds of the most central optimal systems used in signal estimation
- can solve related problems

**Contents:**

**Mode of delivery:**
Blended teaching.

**Learning activities and teaching methods:**
Lectures 28 h / Exercises 14 h / Self-study privately or in a group 93 h. The independent work includes individual STACK-assignments as online work.
Target group:
-

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the courses 031078P Matrix Algebra, 031021P Probability and Mathematical Statistics and 031077P Complex Analysis.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The course is completed with a final exam or a retake exam. In addition to the final exam, STACK-assignments given during the course are part of the assessment. The assessment of the course is based on the learning outcomes of the course.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Vesa Kotila

Working life cooperation:

-

521431A: Principles of Electronics Design, 5 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuyksikkö: Electrical Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Juha Kostamovaara
Opintokohteen kielet: Finnish

ECTS Credits: 5

Language of instruction:
Finnish.

Timing:
Spring, period 3

Learning outcomes:
1. should be able to analyze and design such electronic building blocks as rectifiers, clamping circuits, amplifiers and CMOS logic elements using diodes, operational amplifiers and MOS and bipolar junction transistors.

Contents:
Analogue and digital circuits, basic amplifier related concepts, operational amplifier, diodes and diode circuits, single stage bipolar and MOS transistor amplifiers, small signal modeling and analyzing ac properties of amplifiers, internal structures of digital circuits (mainly CMOS), MOS/CMOS switch.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h and exercises 20 h.
Target group:
Students of Electrical engineering. Other students of the University of Oulu may also participate.

Prerequisites and co-requisites:
Circuit Theory I

Recommended optional programme components:
Recommended course Principles of Semiconductor Devices.

Recommended or required reading:

Assessment methods and criteria:
Final or 2 mid-term exams.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
Numerical grading scale 1-5.

Person responsible:
Juha Häkkinen

Working life cooperation:
-

521302A: Circuit Theory 1, 5 op

Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Electrical Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Rahkonen, Timo Erkki
Opintokohteen kielet: Finnish

ECTS Credits:
5

Language of instruction:
Finnish. Exams can be arranged in English on demand.

Timing:
Spring, period 4

Learning outcomes:
After the course the student can

1. write and solve the equations describing the operation of a given electrical circuit
2. solve the sinusoidal steady-state solution using complex phasor arithmetics
3. solve time responses of electric circuits
4. simplify electrical circuits e.g. using equivalent circuits
5. simulate simple circuits and choose an appropriate circuit simulation method

Contents:

Mode of delivery:
Classroom.

Learning activities and teaching methods:
30h lectures, 22h exercises, and a simulation exercise.

**Target group:**
Finnish BSc students.

**Prerequisites and co-requisites:**
Matrix algebra, complex arithmetics, differential equations.

**Recommended optional programme components:**
Background to all analog electronics courses.

**Recommended or required reading:**

**Assessment methods and criteria:**
Final exam. Also the simulation exercise must be passed.
Read more about [assessment criteria](#) at the University of Oulu webpage.

**Grading:**
1-5

**Person responsible:**
Prof. Timo Rahkonen

**Working life cooperation:**
-

521150A: Introduction to Internet, 5 op

**Voimassaolo:** 01.08.2012 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Electrical Engineering DP
**Arvostelu:** 1 - 5, pass, fail
**Opintokohteen kielet:** Finnish

**ECTS Credits:**
5 ECTS

**Language of instruction:**
All materials are in English, lectures are given in Finnish.

**Timing:**
Spring, period 4.

**Learning outcomes:**
1. is able to explain the design principles, architecture, functionality and challenges of the public internet
2. understands data link layer's role and most important access network technologies
3. is able to explain the structure and most important protocols of the TCP/IP protocol stack
4. knows most important internet applications and their protocols
5. understands the principles of internet security and multimedia applications
6. is able to solve simple internet related problems
7. is able to program a small internet application

**Contents:**
Internet’s design principles and architecture, data link layer and most important access network technologies, TCP/IP protocol stack and its most important protocols, most important Internet applications, principles of Internet security and multimedia, internet's challenges and Future Internet.
Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 32 h / problem solving exercises 14 h / laboratory exercises 12 h / course work 25 h / self-study 52 h. Problem solving exercises, laboratory exercises and course work are completed as group work.

Target group:
Computer Science and Engineering students, Information Processing Science students, other students of the University of Oulu.

Prerequisites and co-requisites:
None.

Recommended optional programme components:
-

Recommended or required reading:
Announced at the beginning of the course.

Assessment methods and criteria:
The course uses continuous assessment so that there are 3 intermediate exams. Alternatively, the course can also be passed with a final exam. The course includes a mandatory course work.

Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course uses numerical grading scale 1-5.

Person responsible:
Dr. Timo Koskela.

Working life cooperation:
-

811312A: Data Structures and Algorithms, 5 op

Voimassaolo: 01.08.2010 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Information Processing Science DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Ari Vesanen
Opintokohteen kielet: Finnish
Leikkaavuudet:

521144A  Algorithms and Data Structures  6.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work.

Language of instruction:
Finnish. One English exercise group will be arranged.

Timing:
The course is held in the autumn semester, during period 2. It is recommended to complete the course in the 2nd study year.

Learning outcomes:
After completing the course the student is able to - describe the concept of algorithm - explain correctness and time complexity of an algorithm - describe the complexity classes of the sorting algorithms presented - prove algorithm correctness - estimate the running time of an algorithm related to the size of the input - describe the data structures presented - argue how to choose a data structure or an algorithm to an application - apply basic graph algorithms - construct a program that applies appropriate data structures to solve a given problem

Contents:

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 48h, exercises 21h, assignment (27), independent work 39h.

Target group:
BSc students.

Prerequisites and co-requisites:
811120P Discrete structures or similar knowledge. Basic skills in programming

Recommended optional programme components:

Recommended or required reading:

Assessment methods and criteria:
Exam and assignment.

Grading:
Numerical scale 1-5 or fail.

Person responsible:
Ari Vesanen

Working life cooperation:
No

477622A: Control System Design, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Seppo Honkanen, Hiltunen, Jukka Antero, Ikonen, Mika Enso-Veitikka
Opintokohteen kielet: Finnish
Leikkaavuudet:
   477603A   Control System Design   4.0 op

ECTS Credits:
5 ECTS / 133 hours of work
Language of instruction:
Finnish (available in English as a book exam: students will receive materials to study and take an final exam based on those materials)

Timing:
Period 3 (spring term)

Learning outcomes:
After completing the course the students can apply mathematical and graphical methods to the dynamics of process characterisation and control design. The student can form PID controllers for the process, and tune them and evaluate the closed-loop requirements.

Contents:
Laplace-level vs, time level, poles of the system, closed loop and its design specifications, PID control and tuning, Matlab control designer tool, control design in frequency domain

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and exercises

Target group:
B.Sc. students in process and environmental engineering

Prerequisites and co-requisites:
The courses 477011P Introduction to process and environmental engineering I, 488010P Introduction to process and environmental engineering and 477602A Control system analysis recommended beforehand

Recommended optional programme components:
None

Recommended or required reading:

Assessment methods and criteria:
Exam

Grading:
Numerical grading scale 1-5 or fail

Person responsible:
Professor Enso Ikonen and university teacher Seppo Honkanen

Working life cooperation:
No

Other information:
-

477502A: Experiment design and analysis, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajan: Aki Sorsa
Opintokohteen kielet: Finnish
Leikkaavuudet:
470432A Process Control Engineering II 5.0 op
ECTS Credits:
5 ECTS /133 hours of work

Language of instruction:
Finnish

Timing:
Implementation in the 4th period on the spring term

Learning outcomes:
After the course, the student knows different experimental design methods and their applicability for different problems. He can also design experiments for multi-variable processes and analyze the results. He can also use some basic means to visualize the results got from experimental data and choose proper tools for experiment design problems.

Contents:

Mode of delivery:
Lectures and extensive exercise work

Learning activities and teaching methods:
Lectures during one period

Target group:
Bachelor’s students in process and environmental engineering

Prerequisites and co-requisites:
Course Process Dynamics is recommended beforehand

Recommended optional programme components:
The course forms a basis to the advanced courses in the field of control engineering

Recommended or required reading:

Assessment methods and criteria:
Examination. It is recommended to take the course also according to the principle of continuous evaluation.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail. Read more about assessment criteria at the University of Oulu webpage.

Person responsible:
Professor Kauko Leiviskä

Working life cooperation:
No

Other information:
For exchange/international students also the course 477041S Experimental Design is recommended

477607S: Advanced Control and Systems Engineering, 5 op

Voimassaolo: 01.08.2005 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Ikonen, Mika Enso-Veitikka
Opintokohteen kielet: Finnish
Leikkaavuudet:
470444S  Advanced Control Methods  6.0 op

ECTS Credits:
5 ECTS, 135 h of work

Language of instruction:
Finnish (available in English as a book exam: students will receive materials to study and take an final exam based on those materials)

Timing:
Period 3

Learning outcomes:
After completing the course the student can design the model based control systems, can formulate and solve state estimation problems, and discover research trends in control and systems engineering

Contents:
1. Model-based control: as DMC, QDMC; GPC. 2. State estimations: as Kalman filtering and particle filters. 3. Active research directions (elected annually)

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures and demonstration exercises

Target group:
M.Sc. students in process and environmental engineering

Prerequisites and co-requisites:
The courses 477621A Control system analysis, 477622A Control system design and 477624S Control system methods recommended beforehand

Recommended or required reading:
Materials distributed during the contact teaching and through the course web pages

Assessment methods and criteria:
Exam and homework

Grading:
Numerical grading scale 1.5 or fail

Person responsible:
Professor Enso Ikonen

477525S: Computational intelligence in automation, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Aki Sorsa, Esko Juuso
Opintokohteen kielet: Finnish
Leikkaavuudet:
477505S  Fuzzy-neuromethods in Process Automation  4.0 op

ECTS Credits:
5 ECTS / 135 hours of work

Language of instruction:
Finnish and English
Timing:
Implementation in the spring term, on the 3rd period. Recommended for 4th year students (first M.Sc. year)

Learning outcomes:
After the course the student is capable of explaining the concepts of intelligent systems and operation principles of fuzzy set systems, neural networks, neuro-fuzzy systems and evolutionary computation. The student has skills to construct and tune fuzzy models in Matlab-Simulink environment and to explain the operation of these models. The student is able to explain in an integrating way the principle concepts of neural computing and construct neural network models in Matlab-Simulink environment. The student recognizes the key problems of the data-driven modelling and is able to choose suitable solutions which ensure generalization. The student is able to explain the operation principles of genetic algorithms and to use them in tuning of fuzzy set systems and neural network models. Moreover, the student is able to describe alternative solutions for dynamic models, hyperplane methods and hybrid solutions. The student can explain the key concepts of cellular automata and evolutionary computation. After the course the student is able to search other relevant programming tools.

Contents:
Fuzzy logic and fuzzy set systems, fuzzy calculus, fuzzy modeling and control, neural computation, learning algorithms, neuro-fuzzy methods, linguistic equations, evolutionary computation, hyperplane methods, cellular automata, intelligent diagnostics and decision making, adaptive intelligent systems, hybrid systems.

Mode of delivery:
Tuition is implemented mainly as face-to-face teaching.

Learning activities and teaching methods:
The amount of guided teaching is 32 hrs, including lectures (16), exercises (10) and seminars (6). Totally 58 hrs are allocated for self-study, which consists of three parts: (1) a case study covering several topics applied in a chosen problem, (2) a seminar work concentrating on a single topic, and (3) the final report.

Target group:
M.Sc. students in process and environmental engineering, machine engineering, computer engineering and industrial engineering and management.

Prerequisites and co-requisites:
No specific prerequisites, but skills for simulation, and programming in Matlab are a benefit. See “Recommended optional programme components” below.

Recommended optional programme components:
Courses Simulation, and Programming in Matlab reinforce abilities for the exercises and the case study

Recommended or required reading:
Lecture notes and exercise materials. Material is in Finnish and in English.

Assessment methods and criteria:
The assessment of the course is based on the exercises, case study, seminar and the final report. Final exam is an alternative for the final report.
Read more about the course assessment and grading systems of the University of Oulu at www.oulu.fi/english/studying/assessment

Grading:
The course unit uses a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
D.Sc. (Tech.) Esko Juuso

Working life cooperation:
No

Other information:
-

462113S: Advanced topics on mechatronics and machine diagnostics, 5 - 10 op

Voimassaolo: 01.12.2016 -
Opiskelumuoto: Advanced Studies
**ECTS Credits:**
5 ects / 133 hours of studying work.

**Language of instruction:**
Finnish, can be completed in English as a book examination

**Timing:**
Lectures and exercises arranged spring during periods 3.

**Learning outcomes:**
The aim of the course is to teach for students how the computer systems are used in different fields of mechanical machine design. After the course, the student is able to define what computer systems belong to the customer centered computer integrated manufacturing. He/she is able to explain what design knowledge is produced in these systems and what design knowledge is transferred between these systems. The student is able to use the CAD/CAM system used in the course in different fields of mechanical machine design.

**Contents:**
The course will focus on the use of computer systems in different fields of mechanical machine design. The emphasis is on the utilization of product data and the realization of product based design systems, where there is often a need to integrate many systems functionally together.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 20 h / exercises 30 h / practical work 83 h

**Target group:**
4th year master degree student of mechanical engineering.

**Prerequisites and co-requisites:**

**Recommended or required reading:**
Assessment methods and criteria:
Final exam and practical work. Final exam will be 40% and practical work 60% of final grade.

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
University Lecturer Tapio Korpela

464122A: Mobile hydraulics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettaja: Jonne Untinen
Opintokohteen kielet: Finnish
Leikkaavuudet:
460076A Mobile Hydraulics 3.5 op

ECTS Credits:
5 ects cr/ 133 hours of student's work

Language of instruction:
Finnish

Timing:
Lectures and exercises during periods 1.-2.

Learning outcomes:
The objective of the course is to provide the students with a general idea of the design and dimensioning of hydraulic systems used in mobile machines. Upon completion of the course, the student is able to describe the basic circuits and characteristics in mobile hydraulics. The student can also describe the most important components and operational preconditions of the mobile hydraulic system. The student is able design simple mobile hydraulic systems. Furthermore, the student is able have discussions with the experts in the field of mobile hydraulics using relevant terminology. The student is also capable of dimensioning the simple hydraulic drivetrain systems.

Contents:
Applications of hydraulic systems in mobile machines; Fundamentals of proportional- and hydraulic technique.; Components and their properties; Basics of design and dimensioning; Maintenance and safety of hydraulic systems. Basics of the digital valves and valve control systems.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
The course consists of lectures, exercises and exercise work. The grade is determined by the sum of examination and exercises. Lectures 20 hours, guided exercises 20 hours. 95 hours of student's independent work

Prerequisites and co-requisites:
462104A Machine automation, 462109S Machine modelling and simulation

Recommended or required reading:

Assessment methods and criteria:
Final exam, The grade is determined by the sum of examination and exercises

Grading:
**461107A: Finite Element Methods I, 5 op**

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies

**Laji:** Course

**Vastuuysikkö:** Field of Mechanical Engineering

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Lumijärvi, Jouko Veikko Juhani

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**

- 461033A  Finite Element Methods I  3.5 op
- 461033A-01  Finite Element Methods I, examination  0.0 op
- 461033A-02  Finite Element Methods I, exercises  0.0 op

**ECTS Credits:**

5 ECTS credits / 132 hours of work

**Language of instruction:**

Finnish

**Timing:**

Lectures and exercises, periods 1.-2.

**Learning outcomes:**

The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

**Contents:**

The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

**Mode of delivery:**

Face-to-face teaching.

**Learning activities and teaching methods:**

Lectures and exercises take place during periods 1.-2. The course can be passed either by completing two midterm exams or a final exam.

**Prerequisites and co-requisites:**

Strength of Materials I and II.

**Recommended or required reading:**

**Assessment methods and criteria:**

The grade of the course is based on midterm exams or a final exam. The student must pass the exercises before taking the examination.

**Grading:**

Numerical grading scale 1-5.

**Person responsible:**

Jouko Lumijärvi

---

**555343S: Product Data and product life cycle management, 5 op**

**Opiskelumuoto:** Advanced Studies
Laji: Course
Vastuuysikkö: Field of Industrial Engineering and Management
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: English
Voidaan suorittaa useasti: Kyllä

Status:
5 ECTS credits.
ECTS Credits:
English.
Language of instruction:
Period 3-4.
Timing:
The course familiarises students with the broad concepts of product data management (PDM) and product life cycle management (PLM). Upon completion of the course, the student will be able to:
• understand the basic terminology related to product, productisation, PDM and PLM
• analyse the current status of the productisation, product data structures, product life cycle management, commercial and technical product portfolios and related applications in case companies
• create strategic PDM and PLM concept based on the critical building blocks for one product data, product master data and product related business data
• model the company’s HW, SW and Service product related commercial and technical product portfolios according to productisation concept
• understand the PDM and PLM processes including key roles as concept owners, education and support roles, data owners, data users including product data quality concept
• create and implement the governance model for PDM and PLM process and IT development as a part of company’s business process development including PDM/PLM related information technology (IT) architecture for product master data and product related business data

Learning outcomes:
PDM and PPM strategic targets, productisation concept, commercial and technical product portfolios, PDM and PLM processes and tools, governance model and related IT applications and architecture

Contents:
The tuition will be implemented as face-to-face teaching.

Mode of delivery:
The tuition will be implemented as face-to-face teaching, course readings and by a practical assignment which is a common with a course 555346S Product portfolio management.

Learning activities and teaching methods:
Lectures 20 h, practical assignment (group work) and self-study 114 h.

Target group:
Industrial Engineering and Management students.

Prerequisites and co-requisites:
555242 Product development, 555346S Product portfolio management.

Recommended optional programme components:
555351S Advanced course in product development, 555350S Research and technology management

Recommended or required reading:
Lecture materials and selected articles.

Assessment methods and criteria:
Group work report (50 % of the grade) and exam (50 % of the grade).

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.
Person responsible:
Senior research fellow Arto Tolonen.

Working life cooperation:
The group work will be done in cooperation with case companies.

Other information:
Previous course name was 'Product Data Management'.

A460250: Supplementary Module/Mechactronics and Machine Diagnostics, Machine Diagnostics, 20 op

Voimassaolo: 01.08.2005 -
Opiskelumuoto: Supplementary Module
Laji: Study module
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

461110S: Fluid mechanics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish
Leikkaavuudet:
461036S-01 Heat and Mass Transfer II, examination 0.0 op
461036S-02 Heat and Mass Transfer II, exercises 0.0 op
461036S Heat and Mass Transfer II 3.5 op

ECTS Credits:
5 ECTS credits / 105 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods I and II.

Learning outcomes:
The aim of this course is to familiarize students with the physical principles of heat transfer and fluid mechanics and their applications. Upon completing the required coursework, the student is able to design machines for the production, transfer and use of energy. Moreover, he/she is able to calculate the amount of loads the flow directs towards the structures. The above requires that the student is able to explain the fundamentals of fluid statics and calculate its applications. He/she can explain the characteristics of flowing fluid and the fundamental concepts of the flow mechanics. The student is able to use mass, momentum and energy conservation equations to solve engineering fluid mechanics problems in a controlled volume. The student is able to determine the frictional losses, piping size and pump power requirements for laminar and turbulent flow in closed conduits for viscous and inviscid fluids.

Contents:
Introduction, dimension analysis and its applications; Fluid statics: Equilibrium equations, pressure center, stability of a floating body; Fluid dynamics: inviscid and viscid incompressible flow, basics of compressible flow, use of numerical methods; Technical applications including flow in pipes, wind loads and wave loads. Introduction to computational fluid mechanics.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 30 h / Exercise 30 h / Self-study 45 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

46116S: Experimental methods in engineering mechanics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish

Leikkaavuudet:
461028S-01 Experimental Methods in Engineering Mechanics, examination 0.0 op
461028S-02 Experimental Methods in Engineering Mechanics, exercises 0.0 op
461028S Experimental Methods in Engineering Mechanics 6.0 op

ECTS Credits:
5 ECTS credits / 90 hours of work

Language of instruction:
Finnish

Timing:
Autumn semester

Learning outcomes:
The course focuses on experimental methods in engineering mechanics, where the student becomes familiar with measurements principles, application potentials and constraints. Learning outcomes: Student can make strain gage and vibration measurements in engineering mechanics field of know-how. With modal analysis tests, student can prepare measurements, make tests and estimate accuracy of the results and compare them to calculated results. He/she can find out characteristic magnitudes from the measurements. He/she can independently make strain gage measurements and estimate the inaccuracies.

Contents:
Strain gage and vibration measurements. Modal analysis tests.

Mode of delivery:
Face-to-face teaching
Learning activities and teaching methods:
Exercise 30 h / Self-study 60 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova

464106S: Production machine design, Paper machinery, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:
  464074S-01 Paper Machinery Construction, examination 0.0 op
  464074S-02 Paper machinery construction, seminar 0.0 op
  464074S Paper Machinery Construction 7.0 op

ECTS Credits:
10 ects / 267 hours of studying work

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures and seminars arranged during autumn and spring periods 1.- 3.

Learning outcomes:
Upon completion of this course the students can describe the most common problems of the production machines and know the effects of machine constructions to quality and production. During the course papermachine is used as an example of production machines. After the course students can explain the importance of the pulp and paper industry to domestic economy and can describe the main stages of paper making processes.

Contents:
Fundamentals of production machine structures and their design criteria. Detailed design criteria of paper machine parts, calenders, rolls as well as construction materials.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 100 h / seminars 12 h / company excursions 30 h / individual studies 60 h.
Target group:
Master's degree students of mechanical engineering or process engineering

Recommended or required reading:
Copies of lecture material

Assessment methods and criteria:
Two midterm exams or one final exam is required and accepted seminar.

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
professor Juhani Niskanen

465106A: Basics of corrosion in metals, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jussi Paavola
Opintokohteen kielet: Finnish

ECTS Credits:
5 ects/135 hours study time

Language of instruction:
Finnish

Timing:
Lectures and laboratory works, 3. and 4. periods

Learning outcomes:
After the course, the student is able to apply his/her knowledge of corrosion when analyzing possibilities of corrosion in certain environments. In addition, he/she is able to classify corrosion modes occurring in different metals and to select a suitable corrosion protection method for iron based metals.

Contents:
Corrosion mechanisms in metal alloys and corrosion protection techniques of metal alloys.

Mode of delivery:
Face-to face teaching

Learning activities and teaching methods:
32 hours lectures/ 4 hours laboratory exercises/99 hours indepedent studies. A laboratory excersise is included in the course.

Recommended or required reading:
Lecture booklet (in Finnish). Other material will be announced at the beginning of the course.

Assessment methods and criteria:
Final exam. The final grade is based on the final exam.

Grading:
Numerical grading scale 1 - 5. A laboratory exercise will be graded as "pass"/"fail".

Person responsible:
Jussi Paavola

477525S: Computational intelligence in automation, 5 op

Voimassaolo: 01.08.2015 -

Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Aki Sorsa, Esko Juuso
Opintokohteen kielet: Finnish
Leikkaavuudet:

ECTS Credits:
5 ECTS / 135 hours of work
Language of instruction:
Finnish and English
Timing:
Implementation in the spring term, on the 3rd period. Recommended for 4th year students (first M.Sc. year)
Learning outcomes:
After the course the student is capable of explaining the concepts of intelligent systems and operation principles of fuzzy set systems, neural networks, neuro-fuzzy systems and evolutionary computation. The student has skills to construct and tune fuzzy models in Matlab-Simulink environment and to explain the operation of these models. The student is able to explain in an integrating way the principle concepts of neural computing and construct neural network models in Matlab-Simulink environment. The student recognizes the key problems of the data-driven modelling and is able to choose suitable solutions which ensure generalization. The student is able to explain the operation principles of genetic algorithms and to use them in tuning of fuzzy set systems and neural network models. Moreover, the student is able to describe alternative solutions for dynamic models, hyperplane methods and hybrid solutions. The student can explain the key concepts of cellular automata and evolutionary computation. After the course the student is able to search other relevant programming tools.
Contents:
Fuzzy logic and fuzzy set systems, fuzzy calculus, fuzzy modeling and control, neural computation, learning algorithms, neuro-fuzzy methods, linguistic equations, evolutionary computation, hyperplane methods, cellular automata, intelligent diagnostics and decision making, adaptive intelligent systems, hybrid systems.
Mode of delivery:
Tuition is implemented mainly as face-to-face teaching.
Learning activities and teaching methods:
The amount of guided teaching is 32 hrs, including lectures (16), exercises (10) and seminars 6). Totally 58 hrs are allocated for self-study, which consists of three parts: (1) a case study covering several topics applied in a chosen problem, (2) a seminar work concentrating on a single topic, and (3) the final report.
Target group:
M.Sc. students in process and environmental engineering, machine engineering, computer engineering and industrial engineering and management.
Prerequisites and co-requisites:
No specific prerequisites, but skills for simulation, and programming in Matlab are a benefit. See "Recommended optional programme components" below.
Recommended optional programme components:
Courses Simulation, and Programming in Matlab reinforce abilities for the exercises and the case study
Recommended or required reading:
Lecture notes and exercise materials. Material is in Finnish and in English.
Assessment methods and criteria:
The assessment of the course is based on the exercises, case study, seminar and the final report. Final exam is an alternative for the final report. Read more about the course assessment and grading systems of the University of Oulu at www.oulu.fi /english/studying/assessment
Grading:
The course unit uses a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
D.Sc. (Tech.) Esko Juuso

Working life cooperation:
No

Other information:

555330S: Sourcing Management, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Industrial Engineering and Management
Arvostelu: 1 - 5, pass, fail
Opettajat: Kess, Pekka Antero
Opintokohteen kielet: Finnish
Leikkaavuudet:
555323S Sourcing Management 3.0 op

ECTS Credits:
5 ECTS credits.

Language of instruction:
Finnish. English material will also be used.

Timing:
Period 2

Learning outcomes:
Upon completion of the course, the student will be able to:
- understand the overall concept of sourcing management
- know the key concepts of sourcing and purchase management and can explain these
- describe the structures of sourcing and purchasing organisations and can explain the meaning of sourcing management in the performance of operations
- analyse the purchasing activities in a company and can produce improvement proposals based on the analysis
- take part in the sourcing development in the role of an expert.

Contents:
Purchasing operations in a manufacturing company, the principles of the sourcing and purchasing strategy and practices, suppliers and products, IT systems for sourcing and purchase.

Mode of delivery:
The tuition will be implemented as blended teaching (face-to-face teaching and a supervised group work).

Learning activities and teaching methods:
Lectures 10 h, assignment guidance 10 h, group work 114 hrs.

Target group:
Industrial Engineering Management students.

Prerequisites and co-requisites:
B.Sc. in Industrial Engineering and Management or equivalent.

Recommended optional programme components:

Recommended or required reading:
Lecture notes. Other material will be defined at the beginning of the course.
**Assessment methods and criteria:**
The assessment is based on the group work.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Professor Pekka Kess

**Working life cooperation:**
The group work is done in cooperation with case companies.

**Other information:**
Substitutes course 555323S Sourcing Management.

477625S: Power Plant Automation, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Process and Environmental Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettaja:** István Selek
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 477611S Power Plant Automation 2.0 op
- 477612S Power Plant Control 3.0 op

**ECTS Credits:**
5 ECTS / 135 hours of work

**Language of instruction:**
Finnish (available in English as a book exam: students will receive materials to study and take an final exam based on those materials)

**Timing:**
Period 3 (spring term)

**Learning outcomes:**
The student has a full understanding of the role of the power plants in energy market and the importance of different energy sources. The student will understand the structure of different power plants, the main components and can explain their behavior and operation. The role and manner of measurements will be clarified. Furthermore, the student will understand the main principles in modelling energy systems. The student will fully understand the static and dynamic behaviour of the power plants and the sub processes. The student will understand the role of control in power plant operation and can describe the main principles and structures of control systems. The student can implement the theoretical knowledge gained in power plant automation courses into practice and has deepened his/her understanding in the subject. The student knows the principles of power plant operation in different situations (start-ups and shut-downs, load changes).

**Contents:**
Introduction to energy market and consumption. Description of different types of power plants and the main components and their operation. Fundamentals of industrial measurements, sensors, emissions and industrial actuators. Static and dynamic modelling of power plants. The control principles and the main control loops. Comparison of different control solutions. 3 x 4h simulation exercises in small groups (2-4 persons) with a MetsoDNA power plant simulator.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures, exercises and industrial visit. Final exam.
Target group:
M.Sc. students in process and environmental engineering

Prerequisites and co-requisites:
No

Recommended or required reading:

Assessment methods and criteria:
Exam

Grading:
Numerical grading scale 1-5 or fail

Person responsible:
Docent Jenő Kovács

Working life cooperation:
No

Other information:

555286A: Process and quality management, 5 op

Voimassaolo: 01.01.2014 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Industrial Engineering and Management
Arvostelu: 1 - 5, pass, fail
Opettaja: Osmo Kauppija
Opintokohteen kielet: Finnish

Leikkaavuudet:
ay555286A Process and quality management (OPEN UNI) 5.0 op
555281A Basic Course of Quality Management 5.0 op

ECTS Credits:
5 ECTS credits.

Language of instruction:
Finnish.

Timing:
Period 4.

Learning outcomes:
Upon completion of the course, the student will be able to:
- explain the role of process and quality management in a business organisation
- develop business processes based on the principles of quality management and appropriate tool

Contents:
Foundations of total quality management, planning of quality, performance measurement, process management, people management in relation to quality management, implantation of total quality management.

Mode of delivery:
The tuition will be implemented as face-to-face teaching (integrated classroom lectures and exercises).

Learning activities and teaching methods:
20 h lectures, 114 h independent study

Target group:
Industrial Engineering and Management students and other students studying Industrial Engineering and Management as minor.

**Prerequisites and co-requisites:**
- 

**Recommended optional programme components:**
This course is part of the 25 ECTS module of Industrial engineering and management that also includes 555225P Basics of industrial engineering and management, 555285A Project management, 555242A Product development, and 555264P Managing well-being and quality of working life.

**Recommended or required reading:**

**Assessment methods and criteria:**
To pass the course, the student must pass the weekly course exercises (50 % of the course grade) and an exam (50 %).

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
University lecturer Osmo Kauppila.

**Working life cooperation:**
No.

**Other information:**
Substitutes course 555281A Basic Course of Quality Management.

**031080A: Signal Analysis, 5 op**

Voimassaolo: 01.08.2015 -  
Opiskelumuoto: Intermediate Studies  
Laji: Course  
Vastuuysikkö: Applied Mathematics and Computational Mathematics  
Arvostelu: 1 - 5, pass, fail  
Opettajat: Kotila, Vesa Iisakki  
Opintokohteen kielet: Finnish  
Leikkaavuudet:  
031050A Signal Analysis 4.0 op  

**ECTS Credits:**
5 ECTS credits / 135 hours of work

**Language of instruction:**
Finnish. The course can be completed in English by a final exam or a retake exam.

**Timing:**
The course is held in the autumn semester, during period II. It is recommended to complete the course at the 2nd autumn semester.

**Learning outcomes:**
Upon completion of the course, the student:
- is able to calculate the energy, the power, the convolution and the frequency spectrum of discrete and analog, periodic and non-periodic deterministic signals  
- is able to study the stationarity, the mutual dependence and the frequency content of random signals by means of the auto- and cross-correlation functions, and the power- and cross-power spectral densities  
- is able to explain the mathematical grounds of the most central optimal systems used in signal estimation  
- can solve related problems
Contents:

Mode of delivery:
Blended teaching.

Learning activities and teaching methods:
Lectures 28 h / Exercises 14 h / Self-study privately or in a group 93 h. The independent work includes individual STACK-assignments as online work.

Target group:
-

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the courses 031078P Matrix Algebra, 031021P Probability and Mathematical Statistics and 031077P Complex Analysis.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The course is completed with a final exam or a retake exam. In addition to the final exam, STACK-assignments given during the course are part of the assessment. The assessment of the course is based on the learning outcomes of the course.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Vesa Kotila

521092A: Electronic Measurement Techniques, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Electrical Engineering DP
Arvostelu: 1 - 5, pass, fail
Opettajat: Juha Saarela
Opintokohteen kielet: Finnish
Leikkaavuudet:
  521171A   Electronic Measurement Techniques   6.5 op
  521171A-01  Electronic measurement techniques, exam   0.0 op
  521171A-02  Electronic measurement techniques, exercise work   0.0 op
  521430A   Electronic Measurement Techniques   6.0 op

ECTS Credits:
5 ECTS credits / 136 h

Language of instruction:
Course is lectured in Finnish. Lecture notes are available in English. Calculation exercises, laboratory exercises and the exam can be done in English.

**Timing:**
Period 4

**Learning outcomes:**
1. can name the electrical measurement technique terminology associated to measurement systems, sensors and buses to candidate level.
2. can plan and implement complicated measurements with oscilloscopes
3. can plan and implement basic measurements with spectrum analyzers
4. can plan and implement basic measurements with light detectors
5. can name common sources of noise and interference
6. name means to control noise and interference
7. can name methods to realize electrical quantities

**Contents:**
Broad view to electronic measurements.

**Mode of delivery:**
Pure face-to-face teaching.

**Learning activities and teaching methods:**
Lectures and calculation exercises 30h, laboratory exercises 16 h and self-study 90h

**Target group:**
Course is compulsory for most electrical engineering students. Course is open for all students in University of Oulu.

**Prerequisites and co-requisites:**
Electrical Measurement Principles, Analogue Electronics I, Digital Techniques I.

**Recommended optional programme components:**
The course replaces previous courses with same name, but different credits and code.

**Recommended or required reading:**
Course material is in English and Finnish and can be found in Optima.

**Assessment methods and criteria:**
Exam and passed lab exercises.
Read more about [assessment criteria](#) at the University of Oulu webpage.

**Grading:**
Grade is based on exam and grade is on numerical scale 1-5.

**Person responsible:**
Juha Saarela

**Working life cooperation:**
None.

-

521302A: Circuit Theory 1, 5 op

**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Electrical Engineering DP
**Arvostelu:** 1 - 5, pass, fail
Opettajat: Rahkonen, Timo Erkki
Opintokohteen kielet: Finnish

ECTS Credits:
5

Language of instruction:
Finnish. Exams can be arranged in English on demand.

Timing:
Spring, period 4

Learning outcomes:
After the course the student can

1. write and solve the equations describing the operation of a given electrical circuit
2. solve the sinusoidal steady-state solution using complex phasor arithmetics
3. solve time responses of electric circuits
4. simplify electrical circuits e.g. using equivalent circuits
5. simulate simple circuits and choose an appropriate circuit simulation method

Contents:

Mode of delivery:
Classroom.

Learning activities and teaching methods:
30h lectures, 22h exercises, and a simulation exercise.

Target group:
Finnish BSc students.

Prerequisites and co-requisites:
Matrix algebra, complex arithmetics, differential equations.

Recommended optional programme components:
Background to all analog electronics courses.

Recommended or required reading:

Assessment methods and criteria:
Final exam. Also the simulation exercise must be passed.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
1-5

Person responsible:
Prof. Timo Rahkonen

Opettajat: Tapio Korpela  
Opintokohteen kielet: Finnish  
Leikkaavuudet:  
462044S-01 Computer Aided Design, examination 0.0 op  
462044S-02 Computer Aided Design, exercise work 0.0 op  
462044S Computer Aided Design 3.5 op  

ECTS Credits:  
5 ects / 133 hours of studying work.  
Language of instruction:  
Finnish, can be completed in English as a book examination  
Timing:  
Lectures and exercises arranged spring during periods 3.  
Learning outcomes:  
The aim of the course is to teach for students how the computer systems are used in different fields of mechanical machine design. After the course, the student is able to define what computer systems belong to the customer centered computer integrated manufacturing. He/she is able to explain what design knowledge is produced in these systems and what design knowledge is transferred between these systems. The student is able to use the CAD/CAM system used in the course in different fields of mechanical machine design.  
Contents:  
The course will focus on the use of computer systems in different fields of mechanical machine design. The emphasis is on the utilization of product data and the realization of product based design systems, where there is often a need to integrate many systems functionally together  
Mode of delivery:  
Face-to-face teaching  
Learning activities and teaching methods:  
Lectures 20 h / exercises 30 h / practical work 83 h  
Target group:  
4th year master degree student of mechanical engineering.  
Prerequisites and co-requisites:  
Recommended or required reading:  
Assessment methods and criteria:  
Final exam and practical work. Final exam will be 40% and practical work 60% of final grade.
Grading:
: Numerical grading scale 1-5 / fail

Person responsible:
University Lecturer Tapio Korpela

464122A: Mobile hydraulics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jonne Untinen
Opintokohteen kielet: Finnish
Leikkaavuudet:
   460076A  Mobile Hydraulics  3.5 op

ECTS Credits:
5 ects cr/ 133 hours of student's work

Language of instruction:
Finnish

Timing:
Lectures and exercises during periods 1.-2.

Learning outcomes:
The objective of the course is to provide the students with a general idea of the design and dimensioning of hydraulic systems used in mobile machines. Upon completion of the course, the student is able to describe the basic circuits and characteristics in mobile hydraulics. The student can also describe the most important components and operational preconditions of the mobile hydraulic system. The student is able to design simple mobile hydraulic systems. Furthermore, the student is able to have discussions with the experts in the field of mobile hydraulics using relevant terminology. The student is also capable of dimensioning the simple hydraulic drivetrain systems.

Contents:
Applications of hydraulic systems in mobile machines; Fundamentals of proportional- and hydraulic technique; Components and their properties; Basics of design and dimensioning; Maintenance and safety of hydraulic systems. Basics of the digital valves and valve control systems.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
The course consists of lectures, exercises and exercise work. The grade is determined by the sum of examination and exercises. Lectures 20 hours, guided exercises 20 hours. 95 hours of student’s independent work

Prerequisites and co-requisites:
462104A Machine automation, 462109S Machine modelling and simulation

Recommended or required reading:

Assessment methods and criteria:
Final exam, The grade is determined by the sum of examination and exercises

Grading:
Numerical grading scale 1-5.
Learning outcomes:
The aim of this course is for students to gain an understanding of the basic idea and restrictions of FEM. After this course, the student can explain the basic idea of the FEM. He/she can analyze simple truss-, frame- and plane structures and explain the theoretical background of the calculations.

Contents:
The basic idea of FEM and its use in static analyses of bars, beams and plane structures. Some general principles of the use of FEM.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercises take place during periods 1.-2. The course can be passed either by completing two midterm exams or a final exam.

Prerequisites and co-requisites:
Strength of Materials I and II.

Recommended or required reading:

Assessment methods and criteria:
The grade of the course is based on midterm exams or a final exam. The student must pass the exercises before taking the examination.

Grading:
Numerical grading scale 1-5.

Person responsible:
Jouko Lumijärvi
Status:
5 ECTS credits.

ECTS Credits:
English.

Language of instruction:
Period 3-4.

Timing:
The course familiarises students with the broad concepts of product data management (PDM) and product life cycle management (PLM). Upon completion of the course, the student will be able to:

- understand the basic terminology related to product, productisation, PDM and PLM
- analyse the current status of the productisation, product data structures, product life cycle management, commercial and technical product portfolios and related applications in case companies
- create strategic PDM and PLM concept based on the critical building blocks for one product data, product master data and product related business data
- model the company’s HW, SW and Service product related commercial and technical product portfolios according to productisation concept
- understand the PDM and PLM processes including key roles as concept owners, education and support roles, data owners, data users including product data quality concept
- create and implement the governance model for PDM and PLM process and IT development as a part of company’s business process development including PDM/PLM related information technology (IT) architecture for product master data and product related business data

Learning outcomes:
PDM and PPM strategic targets, productisation concept, commercial and technical product portfolios, PDM and PLM processes and tools, governance model and related IT applications and architecture

Contents:
The tuition will be implemented as face-to-face teaching.

Mode of delivery:
The tuition will be implemented as face-to-face teaching, course readings and by a practical assignment which is a common with a course 555346S Product portfolio management.

Learning activities and teaching methods:
Lectures 20 h, practical assignment (group work) and self-study 114 h.

Target group:
Industrial Engineering and Management students.

Prerequisites and co-requisites:
555242 Product development, 555346S Product portfolio management.

Recommended optional programme components:
555351S Advanced course in product development, 555350S Research and technology management

Recommended or required reading:
Lecture materials and selected articles.

Assessment methods and criteria:
Group work report (50 % of the grade) and exam (50 % of the grade).

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Senior research fellow Arto Tolonen.
Working life cooperation:
The group work will be done in cooperation with case companies.

Other information:
Previous course name was ‘Product Data Management’.

465113S: Failure mechanisms in metals, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Nousiainen, Olli Pekka
Opintokohteen kielet: Finnish
Leikkaavuudet:
   465079S   Failure Analysis   3.5 op

ECTS Credits:
5 ECTS/135 h study time

Language of instruction:
Finnish

Timing:
Spring semester, period 4. Recommended for fourth year of studies.

Learning outcomes:
After completion of the course, the student will be able to explain the effects of mechanical and environmental loads on the possible failure mechanisms in alloys. (S)he will be able to avoid unsuitable choices of materials in various applications. (S)he will be able to list the stages involved in a typical failure analysis. The student will be able to determine the most likely failure mechanism on the basis of the macroscopic and microscopic features of fracture surfaces. (S)he will be able to give rational instructions for avoiding failures. (S)he will be able to plan tests to measure fatigue and creep resistance.

Contents:
Failure mechanisms at low and high temperatures under static and dynamic loading. Failures caused by corrosion. Macroscopic and microscopic features of fracture surfaces. General principles and approaches to failure analysis. Practical examples of failure cases. Fatigue and creep testing.

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures 32 h / independent study 103 h.

Target group:
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

Recommended or required reading:

Assessment methods and criteria:
Final grade assessed on the basis of final examination.

Grading:
Pass grades on a scale of 1-5. Grade 0 fail.
A460256: Supplementary Module/Structural Engineering and Construction Technology, 25 op

Voimassaolo: 01.08.2016 -
Opiskelumuoto: Supplementary Module
Laji: Study module
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

Ch

466106S: Advanced topics on design of steel structures, 6 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Kangaspuoskari, Matti Johannes
Opintokohteen kielet: Finnish

Leikkaavuudet:

  ay466106S  Advanced topics on design of steel structures (OPEN UNI)  6.0 op
  460128S-01 Advanced Course in Design of Steel Structures I, examination  0.0 op
  460128S-02 Advanced Course in Design of Steel Structures I, exercise work  0.0 op
  460128S  Advanced Topics on Design of Steel Structures I  4.0 op

ECTS Credits:
6 ECTS

Language of instruction:
Finnish

Timing:
Periods 3 and 4

Learning outcomes:
After completing the course the student is capable of explain the performance and design principles of welded steel structures exposed to fatigue loading. He is able to design the plated structural elements and cold-formed members. He is able to analyze and design a steel frame. He is able to analyze dynamically loaded structures and can explain the effect of vibration on steel structures strength and reliability.

Contents:

Mode of delivery:
Face-to-face.

Learning activities and teaching methods:
Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.
Target group:
Major students in Structural Engineering, Machine design, and Engineering Mechanics. 466102A

Prerequisites and co-requisites:

Recommended or required reading:

Assessment methods and criteria:
Three midterm exams or one final exam is required. One design exercise is required.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Matti Kangaspuoskari

466108S: Advanced topics on design of concrete structures, 6 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish
Leikkaavuudet:

- 485116S Advanced topics on design of concrete structures 5.0 op
- 460149S Advanced Topics on Design of Concrete Structures I 4.0 op
- 460149S-01 Advanced Course in Design of Concrete Structures I, examination 0.0 op
- 460149S-02 Advanced Course in Design of Concrete Structures I, exercises 0.0 op

ECTS Credits:
6 ECTS / 162 hours

Language of instruction:
Finnish

Timing:
Lectures and exercising on periods 1 and 2.

Learning outcomes:
Upon completion of the course, the student will be able to design reinforced concrete slabs and prestressed concrete beam structures to EN standards.

Contents:

Mode of delivery:
face-to-face teaching.

Learning activities and teaching methods:
Lectures and exercising 54 hours including personal and team work. Self-reliant studying and homework 108 hours.

Target group:
Master level students focusing on structural engineering and design.

Prerequisites and co-requisites:

Recommended or required reading:

Assessment methods and criteria:
Continuous assessment. The course can be completed by participating in intermediate exams during the course, or in final exam. Assessment criteria are based on the learning outcomes of the course.

Grading:
The course utilises a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
university teacher Raimo Hannila, LSc (tech.)

Other information:
The real-time qualifications for A and AA level structural designers in Finland should be checked out at: Rakennus-, LVI- ja kiinteistöalan henkilöpätevyydet FISE Oy, http://www.fise.fi/.

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Autumn semester, periods 1-2

Learning outcomes:
After completing the course the student is able to manage the goal of the subject by broadening the knowledge to new concrete types and their design methods, testing and application conditions and also on concrete with special properties such as e.g. high-quality, high strength and self-compressing. He can also explain how to assess the structural condition of concrete.

Contents:

Mode of delivery:
Face-to-face and distance learning
Learning activities and teaching methods:
Lectures, exercises, case studies, laboratory sessions and self directed learning

Target group:
Students studying structural engineering

Prerequisites and co-requisites:
466109S Concrete technology

Recommended or required reading:

Assessment methods and criteria:
Passed laboratory exercises and exam

Grading:
Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:
Raimo Hannila

466112S: Advanced topics on building physics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Filip Fedorik
Opintokohteen kielet: English
Leikkaavuudet:
485113S Advanced topics on building physics 5.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
English

Timing:
Autumn, periods 1-2

Learning outcomes:
After completing the course the student can explain the different physical phenomena that affect the temperature and moisture behaviour of different structures. He can also study numerically the building-physical behaviour of structures and structural systems. He can use different software to simulate the behaviour and solve problems. He can assess the potential mould risk of structure based on temperature and relative humidity values measured on site.

Contents:

Mode of delivery:
Face-to-face and distance learning

Learning activities and teaching methods:
Lectures, exercises, case studies and self directed learning
Target group:
Students studying structural engineering

Prerequisites and co-requisites:
466101A Introduction to building construction, 466111S Building physics

Recommended or required reading:
The material that is in English will be distributed at the lectures

Assessment methods and criteria:
Exercises and homework

Grading:
Numerical grading scale 1-5. Grade 0 stands for a fail.

Person responsible:
Filip Fedorik

466115S: Information modelling and automation in infrastructure construction and maintenance, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Rauno Heikkilä
Opintokohteen kielet: Finnish
Leikkaavuudet:

485203A Information modelling and automation in infrastructure construction and maintenance
5.0 op
460180S-01 Automation of Road Construction, examination 0.0 op
460180S-02 Automation of Road Construction, exercises 0.0 op
460180S Automation of Road Construction 5.0 op

ECTS Credits:
5 ECTS

Language of instruction:
Finnish

Timing:
Periods 1 and 2

Learning outcomes:
The course gives understanding about the possibilities of information modeling and automation in infrastructure (roads, railways, fairways, tunnels, bridges) construction, use and maintenance. Also it develops abilities to apply information modeling and automation in infrastructure construction and maintenance. Student will learn more about theories of information modeling and automation, different applications, software and systems, and possibilities of advanced information transferring techniques.

Contents:
Information modeling and automation in the initial data surveying, design, machine and construction work process control, as-built surveys and maintenance of infrastructures. Ellipsoid and geodetic coordinate systems. Creation of 3-D measurement base for sites. Air based, mobile and ground based laser scanning methods and systems. Ground penetrating radar methods and systems. Least squares optimization based redundancy and adjustments. Information modeling based design methods and software applications. Guidance, control and autonomous machine control systems. Dynamic site control methods and systems. Augmented reality methods and applications in the infrastructure field. Advanced monitoring methods and systems. Information modeling based process, methods and systems in maintenance area. National and international information modeling guidelines (YIV2014, HB138, Bridge Information Modeling) for infrastructures. Open information transfer formats and international standards.
Mode of delivery:
Lectures, self study, exercises, site excursions, exam.

Learning activities and teaching methods:
Lectures, self study, exercises, site excursions, exam.

Target group:
Master Students of Mechanical Engineering

Prerequisites and co-requisites:
No specific prerequisites.

Recommended optional programme components:
Information modelling and automation in building construction and maintenance

Recommended or required reading:
Will be announced in the class.

Assessment methods and criteria:
Passed practical works and exam

Grading:
The course utilizes a numerical grading scale 1-5. Numerical scale zero stands for a fail

Person responsible:
professor Rauno Heikkilä

**ECTS Credits:**
5 ECTS /135 hours of work

**Language of instruction:**
Finnish

**Timing:**
The course unit is given in the spring semester, during period 4

**Learning outcomes:**
After the course the student can apply the numerical calculation methods in design and dimensioning of earth and geoenvironmental structures. The student can evaluate the influence of boundary conditions and material parameters in calculation results.
Contents:
Contaminant transport. Design and dimensioning of piles, tailings and dams structures. Settlement calculation due to different load types. Calculating the earth pressure of retaining walls. Freezing and thawing of earth structures. Geotechnical design of pile foundation.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures (10 h), design and modelling assignments (58 h), self-studies (67 h)

Target group:
Master’s students in the study option of Water and Geoenvironmental Engineering

Prerequisites and co-requisites:
488115A Geomechanics, 488102A, Hydrological processes, 477032A AutoCAD and Matlab in process and environmental engineering

Recommended optional programme components:

Recommended or required reading:
Lecture handout and other materials delivered in lectures

Assessment methods and criteria:
Solving the given assignments and writing reports about them. Read more about assessment criteria at the University of Oulu webpage.

Grading:
Pass/fail

Person responsible:
University teacher Anne Tuomela

Opintokohteen kielet: Finnish

ECTS Credits:
5 ECTS /135 hours of work

Language of instruction:
Finnish

Timing:
The course unit is held in the autumn semester, during period 1

Learning outcomes:
The student knows how to calculate stability and settlement of municipal earth structures, design the structures against frost depth and frost heave and evaluate the needs for soil improvement. The student knows risks of the excavations and slopes and can design those using mathematical theories.

Contents:
Norms and instructions, basis of geotechnical design, earth and road structures, properties of soil material and industrial by-products, soil improvement, excavations, Property and surface drainage, lowering of groundwater table. Pipeline Construction. Specialities of railway construction and vibration problems.
Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures (34 h) and design and calculation exercises (10 h) also self-study (91 h)

Target group:
Master students in the Water and Geo Engineering study option of the Environmental Engineering program

Prerequisites and co-requisites:
488115A Geomechanics, 488102A, Hydrological processes, 477032A AutoCAD and Matlab in process and environmental engineering

Recommended optional programme components:
-

Recommended or required reading:
Handout and other materials delivered in lectures

Assessment methods and criteria:
Examination and homeworks
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Professor Kauko Kujala

Arvostelu: 1 - 5, pass, fail
Opettaja: Ali Torabi Haghighi
Opintokohteen kielet: English
Leikkaavuudet:
   488118S Laboratory Exercises and Field Measurements in Environmental Engineering 10.0 op

ECTS Credits:
5 ECTS /133 hours of work

Language of instruction:
English

Timing:
The course unit is given during periods 1 and 2

Learning outcomes:
Upon completion the student should be able to design field measurements and understand the quality of sampling and measurements in the field of environmental engineering. The student also improves skills of working in a team of fellow students to share expertise and execution responsibilities. The student understands the laboratory testing procedures and the associated parameters that help in estimating the soil mechanics and Geotechnical engineering and. The student knows how to use different methods for field measurement and sampling in water and geotechnical issues. The student can take considering the safety during the laboratory works and field measurements. After the course, the student can write detailed engineering reports.

Contents:
In the lectures: Units of measurements, Error and mistake in laboratory works and field measurements, random and systematic error, precision and accuracy in laboratory work, planning field works, description of measuring site, Securing results and material, sample preservation, subsoil exploration, direct & indirect methods of exploration, disturb and undisturbed samples, Safety in field work, introduction on surveying, leveling, map and scale.

In laboratory: Laboratory works on Geotechnical and Geoenvironmental Engineering contain sieving test, hydrometer test, Atterberg limits test, proctor test, direct shear box test and eudiometer test. Field measurement experiences in cold climate.

In the field: Working with GPS. Levelling and collecting data for preparing topography map. Soil and water sampling. Ground water sampling. Measuring velocity and discharge of river.

**Mode of delivery:**
Face-to-face teaching, laboratory working

**Learning activities and teaching methods:**
Activating learning method: Lectures (15 h), group work (120 h)

**Target group:**
Master students in the Water and Geo Engineering and Water and Environment study options

**Prerequisites and co-requisites:**
The required prerequisite is the completion of the following course prior to enrolling for the course unit: 488115A Geomechanics

**Recommended optional programme components:**
-

**Recommended or required reading:**
Field measurements and Laboratory work instruction, lecture materials

**Assessment methods and criteria:**
Each exercise is evaluated graded on the scale 1-5. The final grade of the course is weighted average of following parts: participate in the lectures (5%), participate in the laboratory and field works (20% if the respective report will be presented), assignments (8%), and reports (50%), Exam (15%).

**Grading:**
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Language of instruction:**
Finnish and option complete in English

**Timing:**

The course unit is held in the autumn semester during period 1.

**Learning outcomes:**
The student knows norms and instruction which are related to contaminated sites. The students can choose the suitable remediation technique for contaminated soil. The student can calculate contaminant transport in soils. The student can also design geotechnical structures of industrial and domestic landfills and evaluate the needs for remediation of contaminated soils. Student know how to used by-products from industry in different applications.

**Contents:**
Norms and instructions, there will be a project work where student will be discover a contaminated soil and a proposal remediation technique, Properties of soil material and industrial by-products, basis of geotechnical design to landfill environment, Structures of dams and inpoundments, Challenges of mining, Remote sensing as a part of geotechnical applications.

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures (44 h), group work (60 h) and independent work (31 h)

**488151A: Basics of Traffic Engineering, 5 op**

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Intermediate Studies
Course: Basics of Traffic Engineering

ECTS Credits: 5 ECTS / 133 h of work

Language of instruction: Finnish

Timing: The course unit is given in the autumn semester, during period 1

Learning outcomes: By completing the course the student knows the basics of modes of transport, the significance of traffic and transportation to society, traffic planning and research methods, transport economics and the external effects of transport.

Contents: Modes of transport, Need for traffic and transportation, Transport planning and research, Economical and environmental impacts of traffic, Traffic safety.

Mode of delivery: Face-to-face teaching

Learning activities and teaching methods: Lectures 28 h, exercises 22 h, self-study 85 h

Target group: Students in the Master's Programmes of environmental engineering and mechanical engineering

Prerequisites and co-requisites: No

Recommended optional programme components: The course is an independent entity and does not require additional studies carried out at the same time

Recommended or required reading: Materials delivered during the lectures

Assessment methods and criteria: Examination and exercises

Grading: The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible: University teacher Virve Merisalo

Working life cooperation: No

Other information: 

488152S: Advanced Course in Traffic Engineering, 5 op

Voimassaolo: 01.08.2015 -
Arvostelu: 1 - 5, pass, fail
Opettajat: Virve Merisalo
Opintokohteen kielet: Finnish
Leikkaavuudet:
  485402S  Advanced Course in Traffic Engineering  5.0 op

ECTS Credits:
5 ECTS / 133 h of work

Language of instruction:
Finnish

Timing:
The course unit is given in the autumn semester, during period 2

Learning outcomes:
By completing the course the student understands the basics of transport policy and the significance of
transport economics to society. The student becomes familiar with traffic safety and is able to analyse the
problems of traffic safety and opportunity to improve it.

Contents:
Transport policy, transport economics, traffic safety

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h, exercises 22 h, self-study 85 h

Target group:
Students in the master’s programmes of environmental engineering and mechanical engineering

Prerequisites and co-requisites:
488151A Basics of Traffic Engineering

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time

Recommended or required reading:
Materials delivered during the lectures

Assessment methods and criteria:
Examination and exercises

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Virve Merisalo

488153A: Basics of Road Engineering, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Process and Environmental Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Virve Merisalo
Basics of Road Engineering
5.0 op

ECTS Credits:
5 ECTS / 133 h of work

Language of instruction:
Finnish

Timing:
The course unit is held in the spring semester, during period 3

Learning outcomes:
By completing the course the student understands the basics of road design and construction, is able to
calculate structure layers of road and is familiar with the maintenance of roads

Contents:
Road and street planning and design, lining, roads structure, maintenance of roads, basics of earthworks

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h, exercises 22 h, self-study 85 h

Target group:
Students in master's programmes of environmental engineering and mechanical engineering

Prerequisites and co-requisites:
No

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time

Recommended or required reading:
Materials delivered during the lectures

Assessment methods and criteria:

ECTS Credits:
5 ECTS / 133 h of work

Language of instruction:
**Timing:**
The course unit is held in the spring semester, during period 4

**Learning outcomes:**
By completing the course the student is familiar with road structure and function, structural modernisation, pavements and the basics of earthworks. He/she is also able to design road computer aided.

**Contents:**
Function of road structure, road damaging, structural modernisation, pavements, Road design and construction

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 28 h, exercises 32 h, self-study 75 h

**Target group:**
Students in the master's programmes of environmental engineering and mechanical engineering

**Prerequisites and co-requisites:**
488153A Road Design and Construction, and 488051A AutoCAD and Matlab in process and environmental engineering

**Recommended optional programme components:**
The course is an independent entity and does not require additional studies carried out at the same time

**Recommended or required reading:**
Materials delivered during the lectures

**Assessment methods and criteria:**
Examination and exercises

**Grading:**
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

ECTS Credits:
5 ECTS / 120 hours of work

Language of instruction:
Lectures in finnish, foreign students follow the course by reading independently the books in english and taking part to the exercises and exams where all material is given in english.

Timing:
The course is held in the autumn semester, during periods 1 and 2. It is recommended to complete the course at the 4th autumn semester.

Learning outcomes:
After the course, the student can use terminology of composite materials and their typical mechanical properties in the design of structures. He/she can explain how the elastic properties of anisotropic materials affect the mechanical behavior of laminated shells and plates and calculate stresses and strains of laminae and laminates. In addition, he/she is capable of analyzing bending, buckling and vibration problems of composite laminates by using the classical lamination theory and the finite element method.

Contents:

Mode of delivery:
Implemented as Face-to-face -teaching

Learning activities and teaching methods:
Lectures 30 h / exercises 30 h / independent work of solving homework problems 60 h.

Target group:
For master degree students of mechanical engineering programme.

Prerequisites and co-requisites:
The recommended preceding courses are 461103A Strength of Materials I and 461104A Strength of Materials II.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The course is passed by a final exam. An independent exercise work is required. Participation to the exam is allowed after the accepted exercise work.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Hannu Lahtinen

Other information:
The principals of micro and macro mechanical behaviour of composite materials and their application in analyses and design of composite structures.
46117S: Engineering optimization, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Koivurova Hannu
Opintokohteen kielet: Finnish
Leikkaavuudet:

- 461023S  Optimization of Structures  5.0 op
- 461023S-01 Optimization of Structures, examination  0.0 op
- 461023S-02 Optimization of Structures, exercises  0.0 op

ECTS Credits:
5 ECTS credits / 135 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during periods I and II in every other year.

Learning outcomes:
The aim of this course is to familiarize students with the principles of optimization of structures and their applications in the design of machine parts, welded plate structures, trusses and frames. Upon completing the required coursework, the student knows the fundamental concepts of the optimization and recognizes the different mathematical definitions of the optimum, so called Kuhn Tuckers conditions. He/she is able to formulate the optimization problem mathematically and knows the most important solution methods for the linear and the nonlinear problem both in the constrained and unconstrained cases. The student knows the steps and the structure of the most widely used algorithms, the pros and cons of the different methods, and their suitability in the different problem types. He/she is able to use a commercial computer software for the application in the optimization of machine parts.

Contents:
Formulation of an optimization problem; Linear and non-linear optimization in the design of load-bearing structures; Computer software for optimization of structures; Optimization as a part of a computer aided design system.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 45 h / Computer exercise 30 h / Project work 15 h / Self-study 45 h.

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Assessment methods and criteria:
The final grade is based on the combined points from exercises and final exam. The assessment of the course is based on the learning outcomes of the course. The more detailed assessment criteria are available on the Optima Study Portal.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University Lecturer Hannu Koivurova
462109S: Simulation and modelling of machines, 8 op

**Voimassaolo:** 01.08.2015 -

**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Field of Mechanical Engineering

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Louhisalmi, Yrjö Aulis

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
- 462055S-01 Virtual Engineering of Mechatronic Products, examination 0.0 op
- 462055S-02 Virtual Engineering of Mechatronic Products, exercise work 0.0 op
- 462055S Virtual Engineering of Mechatronic Products 5.0 op

**ECTS Credits:**

8 cr / 213 hours of work

**Language of instruction:**

Finnish

**Timing:**

The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

**Learning outcomes:**

Upon completion of the course, the student will be able to create a simulation model consisting of rigid bodies using Adams and MATLAB/Simulink software. The student is able to interpret the simulation results and is also able to evaluate the validity of the results. The student is able to design submodels of complex systems and he/she is able to explain the principles of creating a more complex simulation model. In addition to this, the student is able to evaluate the extent of modelling process of various kinds of engineering systems.

**Contents:**

Basics of virtual design; ADAMS simulation software principles and basic usage; Creation and usage of multibody systems comprised of rigid bodies; Kinematic and dynamic analysis; Determination of actuator motion paths and velocities as well as determination of loads; Modelling and simulation of control systems.

**Mode of delivery:**

Blended teaching

**Learning activities and teaching methods:**

Lectures 32 h / Group work 32 h / Self-study 149 h

**Target group:**

Master's degree students of mechanical engineering

**Prerequisites and co-requisites:**

The recommended prerequisite is the completion of the following courses prior to enrolling for the course.

**Recommended optional programme components:**

The course is an independent entity and does not require additional studies carried out at the same time.

**Recommended or required reading:**

Lecture handout. Other material is in the beginning of the course.

**Assessment methods and criteria:**

This course utilizes continuous assessment. The assessment can be based on learning diary, exercises, seminars and exam. The more detailed assessment criteria are available on the Noppa Study Portal.

**Grading:**

The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**

ECTS Credits:
10 ECTS credits / 267 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
Upon completion of the course, the student is capable to utilize the different methods of the machine diagnostics and use the most common measuring devices in the finding out the operation and condition of machines. He/she is able to apply the most important features and signal processing methods which are used in the condition monitoring and he/she can analyse the frequency contents of signals to clarify the problems which are related to the operation of machines. The student is able to draw up a measurement plan, carry out the measurements and report the obtained results. The student can use the standards of this field as help in the evaluation of the condition of machines and severity of vibrations. He/she is able to perceive what kind of significance the machine diagnostics has to the success of the maintenance and productivity.

Contents:
The most important methods and measuring techniques which are used in the machine diagnostics, the analysis of machine vibration and faults diagnosis, the most important signal processing methods, measurement planning, realisation and reporting, dynamic balancing of machines, standards of this field

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following course: 462107A Maintenance of Machines

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.
462112S: Measuring instruments in machine diagnostics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies

- 464089S Measuring Instrumentation and Techniques for Diagnosis of Machine Condition 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during period 1 and 2. It is recommended to complete the course at the 5th autumn semester.

Learning outcomes:
Upon completion of the course, the student is able to design, build and calibrate different types of measurement sequences which are needed in machine diagnostics. He/she knows how to use data recorders, analyzers, PC-based measuring systems, data acquisition boards and filters as well as other typical measuring devices and is able to explain their operating principles. The student is also able to recognize typical sources of errors which can influence the reliability of the measuring results.

Contents:
Sensors and other devices which are used in the machine diagnostics, planning, functional evaluation and calibration of the measuring instruments and systems

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses: 462107A Maintenance of Machines and 462111S Machine Diagnostics

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

464107S: Machine design project, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Niskanen, Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:

- 464058S Project Work in Machine Design 8.5 op
- 464084S Project Work in Paper Machinery Construction 8.5 op

ECTS Credits:
10 ects / 267 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Work can be started during the lectures of the course Production Machine Design

Learning outcomes:
The aim of this course is to deepen the student's knowledge of constructions of production machines with the help of extensive exercise. Upon completion of the course, the student has realized a demanding research, development or design project from a topic given by the industry. After completion of the course, the student is able to analyze, develop or improve existing machine components or processes.

Contents:
Carrying out a wide industry based product development, research or design project.

Mode of delivery:
Individual project work.

Learning activities and teaching methods:
Project work is done in groups of 1 to 4 students depending on the size and requirements of the work.

Target group:
Master's degree students of mechanical engineering or process engineering

Prerequisites and co-requisites:
Machine Design or/and Production Machine Design

Recommended optional programme components:
Production Machine Design

Recommended or required reading:
Supplied according to needs

Assessment methods and criteria:
Accepted project work

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
professor Juhani Niskanen

465108S: Modelling of metal forming processes, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies  
Laji: Course  
Vastuuysikkö: Field of Mechanical Engineering  
Arvostelu: 1 - 5, pass, fail  
Opettajat: Jari Larkiola  
Opintokohteen kielet: Finnish

ECTS Credits:
5 / 135 h total study time

Language of instruction:
Finnish

Timing:
Autumn semester, periods I & II. Recommended for fourth study year.

Learning outcomes:
Students are initiated into physical models and computer aided modelling of metal forming processes. The object is to give students e.g. readiness of calculate forming forces during plastic deformations utilising simulation softwares.

Contents:
During course, several physical models for metal forming processes are examined and a strong focus is also in commercial simulation softwares like Abaqus and LS-Dyna. Experimental work is also included in course. In this work, student has to simulate metal forming process by utilising Abaqus or LS-Dyna software.

Mode of delivery:
Face to face

Learning activities and teaching methods:
Lectures 32h, experimental work 20h and independent study 83 h

Target group:
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

Prerequisites and co-requisites:
465103A Principles of metal shaping and forming

Recommended or required reading:
Lecture notes

Assessment methods and criteria:
Accepted examination (weighting 0.7) and experimental work (weighting 0.3).

Grading:
Examination scale 0-5 ja literature work 0-2. Grade 0 fail.

465113S: Failure mechanisms in metals, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Nousiainen, Olli Pekka
Opintokohteen kielet: Finnish

Leikkaavuudet:
465079S Failure Analysis 3.5 op

ECTS Credits:
5 ECTS/135 h study time
**Language of instruction:**
Finnish

**Timing:**
Spring semester, period 4. Recommended for fourth year of studies.

**Learning outcomes:**
After completion of the course, the student will be able to explain the effects of mechanical and environmental loads on the possible failure mechanisms in alloys. (S)he will be able to avoid unsuitable choices of materials in various applications. (S)he will be able to list the stages involved in a typical failure analysis. The student will be able to determine the most likely failure mechanism on the basis of the macroscopic and microscopic features of fracture surfaces. (S)he will be able to give rational instructions for avoiding failures. (S)he will be able to plan tests to measure fatigue and creep resistance.

**Contents:**
Failure mechanisms at low and high temperatures under static and dynamic loading. Failures caused by corrosion. Macroscopic and microscopic features of fracture surfaces. General principles and approaches to failure analysis. Practical examples of failure cases. Fatigue and creep testing.

**Mode of delivery:**
Face to face

**Learning activities and teaching methods:**
Lectures 32 h / independent study 103 h.

**Target group:**
Compulsory in the masters stage for all Mechanical Engineering students majoring in Materials Engineering.

**Prerequisites and co-requisites:**
Before registering for this course the student must have successfully completed the following courses: 465101A An Introduction to Materials for Mechanical Engineering, 465102A Materials for Mechanical Engineering, 465107A An Introduction to Physical Metallurgy.

**Recommended or required reading:**

**Assessment methods and criteria:**
Final grade assessed on the basis of final examination.

**Grading:**
Pass grades on a scale of 1-5. Grade 0 fail.

**Person responsible:**
Professor Jukka Kömi

**466105S: Design of Steel Structures, 6 op**

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Kangaspuros, Matti Johannes
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
485118S  Design of Steel Structures  5.0 op
ay466105S  Design of Steel Structures (OPEN UNI)  6.0 op
460127S-01  Design of Steel Structures, examination  0.0 op
460127S-02  Design of Steel Structures, exercise work  0.0 op
460125A  Introduction to Design of Steel Structures  4.0 op
460125A-01  Introduction to Design of Steel Structures, examination  0.0 op
ECTS Credits:
6 ECTS

Language of instruction:
Finnish

Timing:
Periods 1 and 2

Learning outcomes:
After completing the course the student is capable of explaining the crystalline structure of steel material and he understands elasto-plastic material model. He is able to explain the effect of inclusions, heat treatment and welding process to the mechanical properties of a steel material. The student is familiar with fire design of steel structures. He is able to explain common types of corrosion. The student is able to design the most typical joints in a steel frame and he can analyze simple steel structures. He is also able to analyze stability problems and explain the effects of imperfections and second order effects on frame behavior and member forces.

Contents:

Mode of delivery:
Face-to-face.

Learning activities and teaching methods:
Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:

Prerequisites and co-requisites:

Recommended or required reading:

Assessment methods and criteria:
Three midterm exams or one final exam is required. One design exercise is required.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Matti Kangaspuoskari

466106S: Advanced topics on design of steel structures, 6 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikko: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Kangaspuoskari, Matti Johannes

Leikkaavuudet:
- ay466106S Advanced topics on design of steel structures (OPEN UNI) 6.0 op
- 460128S-01 Advanced Course in Design of Steel Structures I, examination 0.0 op
- 460128S-02 Advanced Course in Design of Steel Structures I, exercise work 0.0 op
- 460128S Advanced Topics on Design of Steel Structures I 4.0 op

ECTS Credits:
6 ECTS

Language of instruction:
Finnish

Timing:
Periods 3 and 4

Learning outcomes:
After completing the course the student is capable of explain the performance and design principles of welded steel structures exposed to fatigue loading. He is able to design the plated structural elements and cold-formed members. He is able to analyze and design a steel frame. He is able to analyze dynamically loaded structures and can explain the effect of vibration on steel structures strength and reliability.

Contents:

Mode of delivery:
Face-to-face.

Learning activities and teaching methods:
Lectures and exercises 52 h. Self-study 110 h. Total 162 h = 6 ECTS Credits.

Target group:
Major students in Structural Engineering, Machine design, and Engineering Mechanics. 466102A

Prerequisites and co-requisites:

Recommended or required reading:

Assessment methods and criteria:
Three midterm exams or one final exam is required. One design exercise is required.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

ECTS Credits:
5 ECTS credits / 135 hours of work

**Language of instruction:**
Finnish or English. The course can be completed in English by intermediate exams or by a final exam.

**Timing:**
Fall semester, period 1

**Learning outcomes:**
After completing the course the student knows the most efficient and numerically stable methods to solve the basic problems in linear algebra. He/she knows the basic matrix factorizations and their approximations. The student has the capability to solve very large and sparse problems with the iterative solutions methods and understands the significance of preconditioning.

**Contents:**

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
Lectures 28 h / Group work 14 h / Self-study 93 h.

**Target group:**

**Prerequisites and co-requisites:**
Completion of courses Calculus I and II, a course on Differential Equations and a Course on Linear Algebra and Numerical analysis

**Recommended optional programme components:**

**Recommended or required reading:**
Material posted on the web-page of the course.

**Assessment methods and criteria:**
Intermediate exams or a final exam. Read more about assessment criteria at the University of Oulu webpage.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Ruotsalainen Keijo

**Opintokohteen kielet:** English

**ECTS Credits:**
5 ECTS credits / 135 hours of work
Language of instruction:
English

Timing:
The course is held in the autumn, during period 1.

Learning outcomes:
After completing the course the student is able to solve optimization convex optimization problems with the basic optimization algorithms. The student is also able to form the necessary and sufficient conditions for the optimality.

Contents:
Linear optimization, Simplex-algorithm, nonlinear optimization, KKT-conditions, duality, conjugate gradient method, penalty and barrier function methods.

Mode of delivery:
Face-to-face teaching

Learning activities and teaching methods:
Lectures 28 h / Group work 14 h / Self-study 93 h.

Target group:
Students in Wireless Communication Engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the courses Calculus I and II, Matrix algebra

Recommended optional programme components:

Recommended or required reading:
P. Ciarlet; Introduction to numerical linear algebra and optimization, M. Bazaraa, H. Sherali, C.M. Shetty; Nonlinear programming

Assessment methods and criteria:
The course can be completed by a final exam.
Read more about assessment criteria at the University of Oulu webpage.

Grading:
The course utilizes a numerical grading scale 0-5. In the numerical scale zero stands for a fail

Person responsible:
Keijo Ruotsalainen

A460255: Supplementary Module, Production Technology, 20 op

Voimassaolo: 01.08.2005 -
Opiskelumuoto: Supplementary Module
Laji: Study module
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

Ei opintojaksokuvauksia.

555286A: Process and quality management, 5 op
Learning outcomes:
Upon completion of the course, the student will be able to:
- explain the role of process and quality management in a business organisation
- develop business processes based on the principles of quality management and appropriate tool

Contents:
Foundations of total quality management, planning of quality, performance measurement, process management, people management in relation to quality management, implantation of total quality management.

Mode of delivery:
The tuition will be implemented as face-to-face teaching (integrated classroom lectures and exercises).

Learning activities and teaching methods:
20 h lectures, 114 h independent study

Target group:
Industrial Engineering and Management students and other students studying Industrial Engineering and Management as minor.

Prerequisites and co-requisites:
- 

Recommended optional programme components:
This course is part of the 25 ECTS module of Industrial engineering and management that also includes 555225P Basics of industrial engineering and management, 555285A Project management, 555242A Product development, and 555264P Managing well-being and quality of working life.

Recommended or required reading:

Assessment methods and criteria:
To pass the course, the student must pass the weekly course exercises (50 % of the course grade) and an exam (50 %).

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University lecturer Osmo Kauppila.

No.
ay724106P: Principles of Marketing (OPEN UNI), 5 op

**Voimassaolo:** 01.01.2014 -
**Opiskelumuoto:** Basic Studies
**Laji:** Course
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Satu Nätti
**Opintokohteen kielet:** Finnish
**Leikkaavuudet:**

724106P Principles of Marketing 5.0 op

**Voidaan suorittaa useasti:** Kyllä

**ECTS Credits:**
5 credits / 133 hours of work

**Language of instruction:**
Finnish

**Timing:**
Period C (1st year).

**Learning outcomes:**
Upon completion of this course, students are able to understand the basic concepts of marketing as part of the business system and society. The student is able to describe the role of marketing in any organization (company, non-profit organization, charity institution etc.) and its linkages to other organizational activities (units, strategy and other processes). Basic concepts of marketing and their linkages become familiar for the student (customer value, value based market analysis and strategy, segmenting, targeting, positioning and marketing mix). After completing this course the student is able to use different types of methods such as (market analysis) and concepts of marketing to aid decision making and evaluate the suitability of these decisions (effectiveness of the decisions) and is able to alter the decision making to yield better value from the customers. The student also realizes the role that marketing partakes in everyday actions in one’s personal life and professional development.

**Contents:**
During the course, following themes will be discussed: 1) marketing as science and practice, 2) definitions of marketing 3) marketing strategy and analysis, 4) marketing mix, 5) segmenting, targeting and positioning, 6) marketing in different contexts, 7) market analysis and new product/service/idea/solution development, 8) distribution, 9) planning, implementation and control value based marketing processes

**Mode of delivery:**
Face-to-face teaching

**Learning activities and teaching methods:**
36 hours of lectures, exam (4h), independent reading of the textbook and articles (43 h), exercises (50 h) or learning assignments (50 h).

**Target group:**
Major students in economics and business administration

**Prerequisites and co-requisites:**
-

**Recommended optional programme components:**
This course is part of “Introduction to business studies” -module

**Recommended or required reading:**

**Assessment methods and criteria:**
Examination and exercise.

**Grading:**
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Professor of Marketing Jari Salo.

**Working life cooperation:**
-

**Other information:**
The number of students is limited.

555330S: Sourcing Management, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course

**Vastuuysikkö:** Field of Industrial Engineering and Management

**Arvostelu:** 1 - 5, pass, fail

**Opettajat:** Kess, Pekka Antero

**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**

555323S Sourcing Management 3.0 op

**ECTS Credits:**
5 ECTS credits.

**Language of instruction:**
Finnish. English material will also be used.

**Timing:**
Period 2

**Learning outcomes:**
Upon completion of the course, the student will be able to:
- understand the overall concept of sourcing management
- know the key concepts of sourcing and purchase management and can explain these
- describe the structures of sourcing and purchasing organisations and can explain the meaning of sourcing management in the performance of operations
- analyse the purchasing activities in a company and can produce improvement proposals based on the analysis
- take part in the sourcing development in the role of an expert.

**Contents:**
Purchasing operations in a manufacturing company, the principles of the sourcing and purchasing strategy and practices, suppliers and products, IT systems for sourcing and purchase.

**Mode of delivery:**
The tuition will be implemented as blended teaching (face-to-face teaching and a supervised group work).

**Learning activities and teaching methods:**
Lectures 10 h, assignment guidance 10 h, group work 114 hrs.

**Target group:**
Industrial Engineering Management students.

**Prerequisites and co-requisites:**
B.Sc. in Industrial Engineering and Management or equivalent.

**Recommended optional programme components:**
-

**Recommended or required reading:**
Lecture notes. Other material will be defined at the beginning of the course

**Assessment methods and criteria:**
The assessment is based on the group work.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Professor Pekka Kess

**Working life cooperation:**
The group work is done in cooperation with case companies.

**Other information:**
Substitutes course 555323S Sourcing Management.

555331S: Advanced Supply Chain Management, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Advanced Studies
**Laji:** Course
**Vastuuysikkö:** Field of Industrial Engineering and Management
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Jukka Majava
**Opintokohteen kielet:** Finnish

**Leikkaavuudet:**
555324S Advanced Supply Chain Management 3.0 op

**ECTS Credits:**
5 ECTS credits.

**Language of instruction:**
Finnish. English material is also used.

**Timing:**
Periods 3-4.

**Learning outcomes:**
Upon completion of the course, the student will be able to:
- define supply chain management concepts, describe supply chain structures, and explain the importance of effective supply chain management
- analyse supply chain operations and propose development areas based on the analysis
- act in an expert role in supply chain development

**Contents:**
Supply chain management concepts, supply chain structures, effectiveness of supply chain, supply chain analysis and development.

**Mode of delivery:**
The tuition will be implemented as blended teaching (web-based teaching and face-to-face teaching).

**Learning activities and teaching methods:**
Lectures 8 h / exercises 4 h / group work 68 h / self-study 54 h.

**Target group:**
Industrial Engineering and Management students.

**Prerequisites and co-requisites:**
B.Sc. in Industrial Engineering and Management or equivalent.

**Recommended optional programme components:**
-
Recommended or required reading:
Sakki, J. (2014) Tilaus-toimitusketjun hallinta. Jouni Sakki Oy. Other materials will be provided at the beginning of the course.

Assessment methods and criteria:
The grade will be based on the group work (60 % of the grade) and book examination (40 % of the grade).

Grading:
The course utilises a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Adjunct professor Jukka Majava

Working life cooperation:
Case organisations’ supply chain related data is utilised in the group works.

Other information:
-

555333S: Production Management, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Industrial Engineering and Management
Arvostelu: 1 - 5, pass, fail
Opettajat: Kess, Pekka Antero
Opintokohteen kielet: English
Leikkaavuudet:

555322S Production Management 3.0 op

ECTS Credits:
5 ECTS credits.

Language of instruction:
English

Timing:
Period 2.

Learning outcomes:
Upon completion of the course, the student will be able to:
- understand the key concepts of operations and production management
- know the essential production strategies
- understand the principles of the supply chain management, and should be able to apply JIT, Lean and TOC methods in analysing and constructing development plans for production organisations
- apply the management methods also in service systems
- understand the principles of the sustainable development in production

Contents:
Production strategies, sustainable development, Supply Chain Management, Just-In-Time (JIT), Theory of Constraints (TOC), Lean, Toyota Production System (TPS), management of the production of services.

Mode of delivery:
The tuition will be implemented as blended teaching (face-to-face teaching and a supervised group work).

Learning activities and teaching methods:
Lectures 20 h, assignment guidance 20 h, group work 94 h.

Target group:
Industrial Engineering and Management and Master’s Programme in Product Management students.

Prerequisites and co-requisites:
B.Sc. in Industrial Engineering and Management or equivalent.

**Recommended optional programme components:**

**Recommended or required reading:**

**Assessment methods and criteria:**
The assessment is based on the group work.

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Professor Pekka Kess

**Working life cooperation:**
The group work is done in cooperation with case companies.

**Other information:**
Substitutes course 555322S Production Management.

---

**555343S: Product Data and product life cycle management, 5 op**

**Opiskelumuoto:** Advanced Studies

**Laji:** Course

**Vastuuysikkö:** Field of Industrial Engineering and Management

**Arvostelu:** 1 - 5, pass, fail

**Opintokohteen kielet:** English

**Voidaan suorittaa useasti:** Kyllä

**Status:**
5 ECTS credits.

**ECTS Credits:**
English.

**Language of instruction:**

**Period:** 3-4.

**Timing:**
The course familiarises students with the broad concepts of product data management (PDM) and product life cycle management (PLM). Upon completion of the course, the student will be able to:

- understand the basic terminology related to product, productisation, PDM and PLM
- analyse the current status of the productisation, product data structures, product life cycle management, commercial and technical product portfolios and related applications in case companies
- create strategic PDM and PLM concept based on the critical building blocks for one product data, product master data and product related business data
- model the company’s HW, SW and Service product related commercial and technical product portfolios according to productisation concept
- understand the PDM and PLM processes including key roles as concept owners, education and support roles, data owners, data users including product data quality concept
- create and implement the governance model for PDM and PLM process and IT development as a part of company’s business process development including PDM/PLM related information technology (IT) architecture for product master data and product related business data

**Learning outcomes:**
PDM and PPM strategic targets, productisation concept, commercial and technical product portfolios, PDM and PLM processes and tools, governance model and related IT applications and architecture

**Contents:**
The tuition will be implemented as face-to-face teaching.

**Mode of delivery:**
The tuition will be implemented as face-to-face teaching, course readings and by a practical assignment which is a common with a course 555346S Product portfolio management.

**Learning activities and teaching methods:**
Lectures 20 h, practical assignment (group work) and self-study 114 h.

**Target group:**
Industrial Engineering and Management students.

**Prerequisites and co-requisites:**
555242 Product development, 555346S Product portfolio management.

**Recommended optional programme components:**
555351S Advanced course in product development, 555350S Research and technology management

**Recommended or required reading:**
Lecture materials and selected articles.

**Assessment methods and criteria:**
Group work report (50 % of the grade) and exam (50 % of the grade).

**Grading:**
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Senior research fellow Arto Tolonen.

**Working life cooperation:**
The group work will be done in cooperation with case companies.

**Other information:**
Previous course name was ‘Product Data Management’.

462106A: Precision engineering, 5 op

**Voimassaolo:** 01.08.2015 -
**Opiskelumuoto:** Intermediate Studies
**Laji:** Course
**Vastuuysikkö:** Field of Mechanical Engineering
**Arvostelu:** 1 - 5, pass, fail
**Opettajat:** Louhisalmi, Yrjö Aulis
**Opintokohteen kielet:** English
**Leikkaavuudet:**
   462038A-01 Precision Engineering, examination 0.0 op
   462038A-02 Precision Engineering, exercise work 0.0 op
   462038A Precision Engineering 3.5 op

**ECTS Credits:**
5 cr / 133 hours of work

**Language of instruction:**
English

**Timing:**
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 3rd or 4th spring semester.

**Learning outcomes:**
Upon completion of the course, the student can analyze structures and components used in precise engineering products, can explain working principles of them and can design new qualified and easily manufactured precise engineering products.

Contents:
Introduction, Housing and usability of devices, permanent and detachable joints, bearing and guidance design and on precise and micromechanical manufacturing methods.

Mode of delivery:
Blended teaching. The course is lectured in English, possible exercises are taught face to face. Final exam in English.

Learning activities and teaching methods:
The course consists of lectures and an exercise work and a final exam.

Target group:
Master's degree students of mechanical engineering

Recommended or required reading:

Assessment methods and criteria:
Final exam. The grade of the course is based on a final examination. The student must pass the exercise work before taking the examination.

Grading:
The course utilizes numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
University teacher Yrjö Louhisalmi

462111S: Machine diagnostics, 10 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Jouni Laurila
Opintokohteen kielet: Finnish

Leikkaavuudet:
464088S Diagnosis of Machine Condition 8.0 op
464088S-01 Diagnosis of Machine Condition, examination 0.0 op
464088S-02 Diagnosis of Machine Condition, exercises 0.0 op

ECTS Credits:
10 ECTS credits / 267 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the spring semester, during periods 3 and 4. It is recommended to complete the course at the 4th spring semester.

Learning outcomes:
: Upon completion of the course, the student is capable to utilize the different methods of the machine diagnostics and use the most common measuring devices in the finding out the operation and condition of machines. He/she is able to apply the most important features and signal processing methods which are used in the condition monitoring and he/she can analyse the frequency contents of signals to clarify the problems which are related to the operation of machines. The student is able to draw up a measurement
plan, carry out the measurements and report the obtained results. The student can use the standards of this field as help in the evaluation of the condition of machines and severity of vibrations. He/she is able to perceive what kind of significance the machine diagnostics has to the success of the maintenance and productivity.

Contents:
The most important methods and measuring techniques which are used in the machine diagnostics, the analysis of machine vibration and faults diagnosis, the most important signal processing methods, measurement planning, realisation and reporting, dynamic balancing of machines, standards of this field

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following course: 462107A Maintenance of Machines

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Jouni Laurila

462112S: Measuring instruments in machine diagnostics, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuyksikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Konsta Antero Karioja
Opintokohteen kielet: Finnish
Leikkaavuudet:

464089S-01  Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, examination 0.0 op
464089S-02  Measuring Instrumentation and Techniques for Diagnosis of Machine Condition, exercises 0.0 op
464089S  Measuring Instrumentation and Techniques for Diagnosis of Machine Condition 5.0 op

ECTS Credits:
5 ECTS credits / 133 hours of work

Language of instruction:
Finnish

Timing:
The course is held in the autumn semester, during period 1 and 2. It is recommended to complete the course at the 5th autumn semester.

Learning outcomes:
Upon completion of the course, the student is able to design, build and calibrate different types of measurement sequences which are needed in machine diagnostics. He/she knows how to use data recorders, analyzers, PC-based measuring systems, data acquisition boards and filters as well as other typical measuring devices and is able to explain their operating principles. The student is also able to recognize typical sources of errors which can influence the reliability of the measuring results.

Contents:
Sensors and other devices which are used in the machine diagnostics, planning, functional evaluation and calibration of the measuring instruments and systems

Mode of delivery:
Face-to-face teaching

Target group:
Master's degree students in the mechanical engineering

Prerequisites and co-requisites:
The recommended prerequisite is the completion of the following courses: 462107A Maintenance of Machines and 462111S Machine Diagnostics

Recommended optional programme components:
The course is an independent entity.

Recommended or required reading:

Assessment methods and criteria:
Final examination and the other graded assignments

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

464103A: Machine design, 5 op

Voimassaolo: 01.08.2015 -
Opiskelumuoto: Intermediate Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Niskanen, Juhani
Opintokohteen kielet: Finnish
Leikkaavuudet:
  464056A     Machine Design II     6.0 op
  464056A-01  Machine Design II, examination  0.0 op
  464056A-02  Design II, exercise           0.0 op
  464062S     Engineering Design          20.0 op

ECTS Credits:
5 ects / 133 hours of studying work.

Language of instruction:
Finnish, can be completed in English as a book examination

Timing:
Lectures spring period 3 and 4.

Learning outcomes:
Upon completion of this course, the student is able, as a member of a design group, to design an entire machine, explain material selections and answer for meaning to be responsible of dimensioning of machine elements. Student is also able to design new product or essentially improve old product. Student knows what is required when working as a part of a product development project.

Contents:
Advanced machine design, design of assemblies and design methods. Utilization of Automation and new materials. Meaning of a machine directive.

Mode of delivery:
Face-to-face teaching.

Learning activities and teaching methods:
Lectures 40 h / practical work 93 h.

Target group:
3rd year mechanical engineering students

Prerequisites and co-requisites:
Design of machine elements, Machine drawing and CAD.

Recommended or required reading:

Assessment methods and criteria:
Final exam and practical work. Final exam is 50% and practical work 50% of final grade

Grading:
Numerical grading scale 1-5 / fail

Person responsible:
Professor Juhani Niskanen

469097S: Master's Thesis in Automotive Engineering, 30 op

Opiskelumuoto: Advanced Studies
Laji: Diploma thesis
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits:
30 ECTS

Language of instruction:
Finnish or English

Timing:
Recommended timing the spring term of the 2nd year of the master level.

Learning outcomes:
Upon completion of the thesis the student recognizes practical problems, she/he be able to create a research plan and research questions. She/He is able to plan the project and manage her/his own work according to the timetable. Student controls different kind of research methods and be able to apply skills learned during master's studies to solving asked research questions. She/he understand practical meanings of solutions, limited and know if there is some useful outputs. The student can also utilize different information sources and critically evaluate the information obtained. The student is able to produce clear and finalized text, in line with technical and scientific writing practices.

Contents:
The student defines the contents of his / her work, consulting the supervisor of the Master's thesis. The Chief of degree programme accepts the contents, the subject and the topic of the thesis work.

Mode of delivery:
Individual work. The diploma thesis completes the master's degree studies.

Learning activities and teaching methods:
The Master's thesis work is supervised by a staff member of the Faculty and doing with industrial company.

Target group:
Mechanical Engineering Master's students

Prerequisites and co-requisites:
Master's level studies of Degree programme.

Assessment methods and criteria:
The thesis work is made independently by the student as planned. The thesis work is saved digitally and reviewed through the University of Oulu Laturi electronic thesis (E-thesis) submission system. Final written report will evaluate.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.
Person responsible:
Thesis' supervisor

Working life cooperation:
Working in or with the industrial company.

469091S: Master's Thesis in Machine Design, 30 op

Opiskelumuoto: Advanced Studies

Student controls different kind of research methods and be able to apply skills learned during master's studies to solving asked research questions. She/he understand practical meanings of solutions, limited and know if there is some useful outputs. The student can also utilize different information sources and critically evaluate the information obtained. The student is able to produce clear and finalized text, in line with technical and scientific writing practices.

Contents:
The student defines the contents of his / her work, consulting the supervisor of the Master's thesis. The Chief of degree programme accepts the contents, the subject and the topic of the thesis work.

Mode of delivery:
Individual work. The diploma thesis completes the master's degree studies.

Learning activities and teaching methods:
The Master's thesis work is supervised by a staff member of the Faculty and doing with industrial company.

Target group:
Mechanical Engineering Master's students

Prerequisites and co-requisites:
Master's level studies of Degree programme.

Assessment methods and criteria:
The thesis work is made independently by the student as planned. The thesis work is saved digitally and reviewed through the University of Oulu Laturi electronic thesis (E-thesis) submission system. Final written report will evaluate.

Grading:
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
Thesis' supervisor

Working life cooperation:
Working in or with the industrial company.

469099S: Master's Thesis in Structural Engineering and Construction Technology, 30 op

Voimassaalo: 01.08.2005 - 
Opiskelumuoto: Advanced Studies
Laji: Diploma thesis
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opintokohteen kielet: Finnish

ECTS Credits:
30 ECTS

Language of instruction:
Finnish/English

Timing:
Recommended timing the spring term of the 2nd year of the master level.
Learning outcomes:
Upon completion of the thesis the student recognizes practical problems, she/he be able to create a research plan and research questions. She/He is able to plan the project and manage her/his own work according to the timetable. Student controls different kind of research methods and be able to apply skills learned during master's studies to solving asked research questions. She/he understand practical meanings of solutions, limited and know if there is some useful outputs. The student can also utilize different information sources and critically evaluate the information obtained. **Grading:**
The course unit utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

**Person responsible:**
Thesis' supervisor

**Working life cooperation:**
Working in or with the industrial company.

---

**Compulsory**

469090S: The Maturity Test for Master’s Degree, 0 op

- **Voimassaolo:** 01.08.2009 -
- **Opiskelumuoto:** Advanced Studies
- **Laji:** Course
- **Vastuuysikkö:** Field of Mechanical Engineering
- **Arvostelu:** 1 - 5, pass, fail
- **Opintokohteen kielet:** Finnish

**ECTS Credits:**
0 ECTS

**Language of instruction:**
Finnish, Swedish or English.

**Timing:**
After completion of the master's thesis.

**Learning outcomes:**
The student can produce text in popular form of the research field and thus show ones familiarity to the field.

**Contents:**
Depends on the topic of the thesis.

**Mode of delivery:**
Literary work.

**Learning activities and teaching methods:**
Exam.

**Target group:**
Master Students of Mechanical Engineering

**Assessment methods and criteria:**
Student writes an essay about the topic of the Master's thesis to show a good command of the content of the thesis

**Grading:**
Pass or fail

**Person responsible:**
Supervisor of Thesis

466113S: Construction economics, 5 op

Voimassaolo: 01.08.2015 - 31.07.2018
Opiskelumuoto: Advanced Studies
Laji: Course
Vastuuysikkö: Field of Mechanical Engineering
Arvostelu: 1 - 5, pass, fail
Opettajat: Rauno Heikkilä
Opintokohteen kielet: Finnish
Leikkaavuudet:

- 485021A Construction Contracting 5.0 op
- 460165A-01 Introduction to Construction Economics I, examination 0.0 op
- 460165A-02 Introduction to Construction Economics I, practical work 0.0 op
- 460165A Introduction to Construction Economics I 3.0 op

ECTS Credits:
5 ECTS credits / 132 hours of work

Language of instruction:
Finnish

Timing:
Autumn, period 2

Learning outcomes:
The student know the role of the construction sector in national economy. He can classify life cycle stages in construction, he know cost steering methods, production planning and tasks in a construction site control. The student know sources of data for cost control and can estimate a bid in tendering. Profitability of investments can be assessed and financial aspects in energy and LCC calculations can be carried out. Financing calculations with rental cost assessment will be studied. The student know principles of contract administration and contract types and can explain the actions of contractors and construction managers in construction projects. The student will become acquainted with some features of human resource management, business management and production management. The student can plan general time- table, building site plan, work package plan and week schedule in construction. Procurement and machinery plan include the course.

Contents:

Mode of delivery:
Lecture room teaching.

Learning activities and teaching methods:
Lectures 24 h /exercises 47 h independently or in groups self-study and exams 65 h. Total 136 h/5 ECTS credits.

Target group:
Bachelor level students

Recommended optional programme components:
The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:
Educational handouts and materials, Educational materials in information network, Recommended literature:
Finnish literature, see adjacent text
Assessment methods and criteria:
Examination and accepted home work assignments.

Grading:
The course utilizes a numerical grading scale 1-5. In the numerical scale zero stands for a fail.

Person responsible:
professor Rauno Heikkilä
