Description

Description

The programme will produce experts in analytics, who understand the needs of business, industrial and public organizations in regard to gathering, analyzing and using digital data for decision making, operations and development work. The programme addresses how to evaluate, choose and deploy the relevant analytics theories and methods and gain experience in using tools and environments for solving real-life analytics problems. The students will learn how to interpret analysis results and present them for the respective users, as well as spar and give recommendations for decision making. Simulation and optimization means are included, as well as the dynamics of actions, outcomes and contexts involved in analysis targets. The programme addresses how to search for, gather and create research data and produce research reports based on scientific conduct in multi-disciplinary settings and different empirical contexts. In addition, responsible and sustainable business, as well as the ethics of data gathering, management and analysis principles and practices are included. The programme revolves around teamwork and project-based collaboration, so that problems can be solved for and with external stakeholders based also on good communication skills. The students will learn to plan and manage development projects and launch new activities involving business analytics. They will gain scientific knowledge, practical experiences and networks that will make it possible for them to continue their studies and carry out research towards a doctoral degree.

Further information

Curriculum development and working life cooperation

Objectives

After completing the Master's Programme in Business Analytics:

Graduates are able to acquire data and organize, analyze and manipulate it for development and deployment. They know simulation and optimization means and can make use of them. They can make use of appropriate methods and tools for external (e.g. suppliers, users, customers, competitors) and internal (e.g. R&D, production, management, sales) analysis needs. Graduates know data protection, privacy and ethics principles and can work in multi-party teams and projects. They know how to develop and deploy business analytics in different environments and contexts.

Structure

Code	Name	Credits
IMP2021BAIPS	Business Analytics, Information Processing Science (MSc), 2021-2022	120-125
IMP2021BAIPS-1001	Business Analytics, Information Processing Science, General Studies	15
IMP2021BAIPS-1010 Foreign Language Studies		5
900017Y	Survival Finnish	2
900013Y	Beginners' Finnish Course 1	3

IMP2021BAIPS-1011 Compulsory Orientation Studies		10
721021A	Intermediate Course to Business Analytics	5
721022S	Data and Decision Making	5
IMP2021BAIPS-1002	Business Analytics, Information Processing Science, Advanced Studies	55
IMP2021BAIPS-1003 Compulsory Studies		55
812352A	Digitalisation and Innovation	5
521156S	Towards Data Mining	5
817619S	Societal and Individual Impacts of Information Systems	5
721026S	Statistical Methods for Business Analytics	5
721023S	Market and Competitor Analysis	5
721024S	Customer Behaviour Analysis	5
721025S	Enterprise Process Planning	5
811397A	Basics of Project Work	5
813320A	Business Intelligence: Applications and Projects	5
721027S	Capstone Project I	5
721028S	Capstone Project II	5
IMP2021BAIPS-1006	Business Analytics, Information Processing Science, Studies of Specialisation	20-25
IMP2021BAIPS-1007 Compulsory Studies		10
811604S	Software for Intelligent Systems and Artificial Intelligence (AI)	5
817615S	Creating Domain Value with Data	5
IMP2021BAIPS-1009 Recommended Optional Studies for Finnish Students		15
KA00DA47	Tools of Data Analysis	5
KA00DA50	Data Visualization	5
811610S	Special Course in Information Processing Science 1.	5-10
813632S	Special Course in Information Processing Science 2	5
813633S	Special Course in Information Processing Science 3	5
813634S	Special Course in Information Processing Science 4	5
811607S	Persuasive Systems Design	5
812651S	ICT and Behaviour Change	5
812650S	Advanced Topics in Digital Cultures and Design	5
812671S	User Experience (UX) and Usability Evaluation	5
815663S	Software Engineering Research	5
811606S	Next Generation Software Engineering	5
812362A	Business Process Management and Modelling	5
812364A	Data Analytics and Business Intelligence	5
812360A	Information Systems Modelling, Design and Development	5
812361A	Information Systems Acquisition, Deployment and Management	5
811168P	Information Security	5

521157A	Introduction to Social Network Analysis	5
521160P	Introduction to Artificial Intelligence	5
IMP2021BAIPS-1013 Recommended Optional Studies for Non-Finnish Students		10
KA00DA47	Tools of Data Analysis	5
KA00DA50	Data Visualization	5
811610S	Special Course in Information Processing Science 1.	5-10
813632S	Special Course in Information Processing Science 2	5
813633S	Special Course in Information Processing Science 3	5
813634S	Special Course in Information Processing Science 4	5
811607S	Persuasive Systems Design	5
812651S	ICT and Behaviour Change	5
812650S	Advanced Topics in Digital Cultures and Design	5
812671S	User Experience (UX) and Usability Evaluation	5
815663S	Software Engineering Research	5
811606S	Next Generation Software Engineering	5
812362A	Business Process Management and Modelling	5
812364A	Data Analytics and Business Intelligence	5
812360A	Information Systems Modelling, Design and Development	5
812361A	Information Systems Acquisition, Deployment and Management	5
811168P	Information Security	5
521157A	Introduction to Social Network Analysis	5
521160P	Introduction to Artificial Intelligence	5
IMP2021BAIPS-1012	Business Analytics, Information Processing Science, Master's Thesis	30
813661S	<i>Master's Thesis, Business Analytics (Information Processing Science)</i>	30
813607S	<i>IPS (TOL), Maturity Test for Master's Degree</i>	0
