*The DIPP project is a collaborative study of three Finnish university hospitals (Turku, Tampere, and Oulu) aiming to predict and search for means to delay or prevent type 1 diabetes. To date, over 150 000 children have been screened for T1D risk alleles. Of those, over 8500 children carrying increased genetic risk for type 1 diabetes have participated in the study. Over 300 of them have progressed to clinical diabetes.*
